

BE CIVIL ENGINEERING

1701MGX001	PROFESSIONAL ETHICS				L	T	P	C
		3	0	0	3			
Course Objectives:								
	1.The primary goal is to stimulate critical and responsible reflection on moral issues surrounding engineering practice and to provide the conceptual tools necessary for pursuing those issues. 2.Also to make the students aware of the different ethical issues, codes of conduct for engineers in the society and moralities in an organization.							
Unit I	INTRODUCTION & HUMAN VALUES						9 Hours	
Morals, Values and Ethics- Work Ethic - Team work – Types of Ethics - Respect for Others- Living Peacefully- Honesty- Courage - Valuing Time - Co-operation - Commitment- Self-Confidence - Customs and religion-Caring and Sharing.								
Unit II	ENGINEERING ETHICS						9 Hours	
Engineering ethics – Variety of moral issues – Types of Inquiry – Professional accountability – Self Interest – Moral dilemmas – Kohlberg’s Theory – Gilligan’s Theory – Theories about Right Action – Ethical codes of IEEE and Institution of Engineers.								
Unit III	SAFETY & RESPONSIBILITY OF ENGINEERS						10 Hours	
Engineering as experimentation – Safety and Risks – Risk – benefit analysis – Computer Technology Privacy – Social Policy – Engineering standards – Communicating Risk and Public Policy – Occupational Crime – Professional Rights and Employee Rights – Whistle Blowing – Collective Bargaining – Conflicts of Interest.								
Unit IV	ENGINEER’S ROLE						9 Hours	
Engineers as Managers, Advisors, Consultants, Experts and Witness – Engineers role in industry and society – Theories about right action – Moral leadership - Collegiality and loyalty – IPR – Discrimination - Bhopal gas tragedy case study.								
Unit V	GLOBAL ISSUES						8 Hours	
Multinational corporations- Environmental Ethics - Weapons Development- Code of Conduct – Eco – friendly production system – Sustainable technology & development – ozone depletion – Eco system – Pollution control.								
							Total:	45 Hours
Further Proceeding:								
	1. Analysis about Safety and Risk Management in an Organisation							
	2. Analysis about Code of Conduct for Ethical & Moral values							
Course Outcomes:								
	After completion of the course, Student will be able to							
	3. Obtain awareness on Human Values & Social Values of the every individual.							
	4. Knowledge about ethical theories and relevant code of conduct for engineers.							
	5. Enumerate the safety and responsibility of engineers in the society.							
	6. Realize their responsibilities, professional rights and moralities for the enhancement of an organization.							
	7. Explain about the environmental impacts at present day scenario.							

1702CE305	BUILDING MATERIALS AND RESOURCE PLANNING		L	T	P	C
			3	0	0	3
Course Objectives:						
	1. To give students an understanding of typical and potential application of Building materials.					
	2.To ensure that students know about the manufacturing process of Building materials and mix designing procedure of concrete					
	3.Give students an appreciation of the effective use of common and modern materials in construction					
Unit I	Stones – bricks – concrete blocks					9 Hours
Stone as building material – Criteria for selection – Tests on stones – Deterioration and Preservation of stone work – Bricks – Classification – Manufacturing of clay bricks – Tests on bricks – Compressive Strength – Water Absorption – Efflorescence – Bricks for special use – Refractory bricks – Cement, Concrete blocks – Lightweight concrete blocks.						
Unit II	Lime – cement – aggregates – mortar					9 Hours
Lime – Preparation of lime mortar – Cement – Ingredients – Manufacturing process – Types and Grades – Properties of cement and Cement mortar – Hydration – Compressive strength – Tensile strength – Fineness– Soundness and consistency – Setting time – Industrial byproducts – Fly ash – Aggregates – Natural stone aggregates – Crushing strength – Impact strength – Flakiness Index – Elongation Index – Abrasion Resistance – Grading – Sand Bulking.						
Unit III	Concrete					9 Hours
Concrete – Ingredients – Manufacturing Process – Batching plants – RMC – Properties of fresh concrete – Slump – Flow and compaction Factor – Properties of hardened concrete – Compressive, Tensile and shear strength – Modulus of rupture – Tests – Mix specification – Mix proportioning – BIS method – High Strength Concrete and HPC – Self compacting Concrete – Other types of Concrete – Durability of Concrete.						
Unit IV	Timber and modern material					9 Hours
Timber – Market forms – Industrial timber– Plywood – Veneer – Therma Cole – Panels of laminates – Steel Aluminum composite panel – Uses – Paints – Varnishes – Distempers – Bitumens.Glass – Ceramics – Sealants for joints – Fiber glass reinforced plastic – Clay products – Refractories – Composite materials — Fiber textiles – Geomembranes and Geotextiles for earth reinforcement.						
Unit V	Materials management					9 Hours
Materials Management - Material Procurement and Delivery - Inventory Control - Tradeoffs of Costs in Materials Management						
					Total:	45 Hours
Further Reading:						
	1. On completion of this course the students will be able to Compare the properties of most common and advanced building materials and understand the typical and potential applications of these materials					
Course Outcomes:						
	After completion of the course, Student will be able to					
	1. Summarize the most common and advanced materials used for construction.					
	2.Explain the manufacturing process of various building materials					
	3. Explain the properties of fresh and hardened concrete and performance of other types of concrete.					

	4. Illustrate the usage of timber, plywood and aluminum, composite material, paints, distemper and modern materials.
	5. summarize the procedure in material management

1702CE604		WATER SUPPLY ENGINEERING	L	T	P	C
			3	0	0	3
Course Objectives:						
	1. To examine the water supply system and conveyance system.					
	2. To create an ability to evaluate the water treatment and advanced water treatment system.					
	3. To train the students to analyze water distribution system and supply to buildings.					
Unit I	PLANNING FOR WATER SUPPLY SYSTEM					08 Hours
Public water supply system -Planning -Design period - Population forecasting -Water demand -Sources of water and their characteristics -Surface and Groundwater- Impounding Reservoir Well hydraulics - Development and selection of source - Water quality - Characterization and standards.						
Unit II	CONVEYANCE SYSTEM					07 Hours
Water supply -intake structures -Functions and drawings -Pipes and conduits for water- Pipe materials - Hydraulics of flow in pipes -Transmission main design – Materials of pipes- Laying, jointing and testing of pipes - Drawings appurtenances - Types and capacity of pumps -Selection of pumps and pipe materials.						
Unit III	WATER TREATMENT					12 Hours
Objectives - Unit operations and processes - Principles, functions design and drawing of Screens, Flash mixers, flocculators, sedimentation tanks and sand filters - Disinfection- Residue Management.						
Unit IV	ADVANCED WATER TREATMENT					09 Hours
Aerator - Iron and manganese removal, Defluoridation and demineralization -Water softening - Desalination - Membrane Systems-Construction and Operation & Maintenance aspects of Water Treatment Plants- Recent advances-Membrane processes.						
Unit V	WATER DISTRIBUTION AND SUPPLY TO BUILDINGS					09 Hours
Requirements of water distribution -Components -Service reservoirs -Functions and drawings -Network design - Analysis of distribution networks –Pipe Appurtenances -operation and maintenance -Leak detection, Methods. Principles of design of water supply in buildings -House service connection -Fixtures and fittings - Systems of plumbing and drawings of types of plumbing.						
					Total:	45 Hours
Further Reading:						
	1. Apply an appropriate unit system for the water treatment.					
	2. Estimate the quantity of wastewater and storm run-off generated from the town/ city and design a suitable collection system for the generated wastewater.					
Course Outcomes:						
	After completion of the course, Student will be able to					
	1. Discuss about the principles and development of water supply system.					
	2. Design the pipelines for water supply system governed with head loss.					
	3. Design drawing of various unit operations in water supply system.					
	4. Identify the methods for removing contaminants in water treatment system using advanced techniques.					
	5. Interpret the network for water supply to buildings and House service connection.

1702CE652		ENVIRONMENTAL AND IRRIGATION DESIGN AND DRAWING	L	T	P	C
			3	0	0	3
Course Objectives:						
	1.to know about the design of environmental structures					
	2.to know the pictorial representation of irrigation structures					
Unit I	WATER SUPPLY AND TREATMENT					08 Hours
Design & Drawing of flash mixer, flocculator, clarifier – Slow sand filter – Rapid sand filter – Infiltration gallery – Intake towers – Service reservoirs – Pumping station – House service connection for water supply and drainage.						
Unit II	SEWAGE TREATMENT & DISPOSAL					07 Hours
Design and Drawing of screen chamber - Grit channel - Primary clarifier - Activated sludge process – Aeration tank & oxidation ditch – Trickling filters – Secondary clarifiers – Sludge digester – Sludge drying beds – Waste stabilisation ponds - Septic tanks and disposal arrangements – Manholes.						
Unit III	IMPOUNDING STRUCTURES					12 Hours
Gravity dam, Tank Surplus Weir, Tank Sluice with tower road – Drawing showing plan, elevation, half section including foundation details.						
Unit IV	CANAL TRANSMISSION STRUCTURES					09 Hours
Aqueducts – Syphon Aqueducts – Super passage – Canal siphon – Canal Drops- Drawing showing plan, elevation and foundation details.						
Unit V	CANAL REGULATION STRUCTURES					09 Hours
Canal head works- Canal Regular – Canal escape- Proportional Distributors – Drawing showing detailed plan, elevation and foundation.						
					Total:	45 Hours
Further Reading:						
	1.to analyse and draw advanced irrigation and environmental structures					
Course Outcomes:						
	After completion of the course, Student will be able to					
	1.design environmental treatment system					
	2. design the irrigationimpounding structures					
	3. design the canal transmission structures					
	4. design the canal regulation structures					
References:

1702CE702	WASTE WATER ENGINEERING			L	T	P	C
				3	0	0	3
Course Objectives:							
	1. To understand the importance of planning and design of sewerage system.						
	2. To create an ability to evaluate the waste water treatment system.						
	3. To impart the signification of disposal of Sewage.						
Unit I	PLANNING FOR SEWERAGE SYSTEMS						09 Hours
Sources of wastewater generation – Effects – Estimation of sanitary sewage flow – Estimation of storm runoff – Factors affecting Characteristics and composition of sewage and their significance – Effluent standards – Legislation requirements.							
Unit II	DESIGN OF SEWER						09 Hours
Sewerage – Hydraulics of flow in sewers – Design period - Design of sanitary and storm sewers – Small bore systems – Materials of sewers– Laying, joining & testing of sewers – Forces acting on sewers– Cleaning and maintenances of sewers- Sewer appurtenances – Pumps – selection of pumps and pipe Drainage -. Plumbing System for Buildings – One pipe and two pipe system.							
Unit III	PRIMARY TREATMENT OF SEWAGE						09 Hours
Objective – Unit Operation and Processes – Selection of treatment processes – Principles, functions design and drawing of screen, grit chambers and primary sedimentation tanks – Operation and Maintenance aspects – Onsite sanitation - Septic tank, Grey water harvesting.							
Unit IV	SECONDARY TREATMENT OF SEWAGE						09 Hours
Objective – Selection of Treatment Methods – Principles, Functions, Design and Drawing of Units - Activated Sludge Process and Trickling filter, other treatment methods – Oxidation ditches, UASB – Waste Stabilization Ponds – Reclamation and Reuse of sewage - Recent Advances in Sewage Treatment – Construction and Operation & Maintenance of Sewage Treatment Plants.							
Unit V	DISPOSAL OF SEWAGE AND SLUDGE						09 Hours
Standards for Disposal - Methods – dilution – Self-purification of surface water bodies – Oxygen sag curve – Land disposal – Sewage farming – Deep well injection – Soil dispersion system -Sludge characterization – Thickening – Sludge digestion – Biogas recovery – Sludge Conditioning and Dewatering – disposal – Advances in Sludge Treatment and disposal.							
						Total:	45 Hours
Further Reading:							
	1. Design the necessary treatment units for energy conservation.						
	2. Design the suitable disposal unit for the sludge without endangering the environment.						
Course Outcomes:							
	After completion of the course, Student will be able to						
	1. Examine the waste water quality characteristics and standards.						

	2. Design sewerage systems and discuss about the treatment process step by step done in primary level.
	3. Design the various unit operations for waste water treatment.
	4. Design the sludge treatment and disposal methods.
	5. Perform quality analysis of sewage the characteristics and composition of sewage, self - Purification of streams.

1703CE006	SOLID WASTE MANAGEMENT	L	T	P	C
		3	0	0	3
Course Objectives:					
	To study the Sources and types of municipal solid wastes				
	To impart the knowledge of On-site Processing, collection and transfer of solid waste.				
	To acquire the knowledge of Off –site Processing and waste disposal management.				
Unit I	SOURCES AND TYPES OF MUNICIPAL SOLID WASTES	8 Hours			
Sources and types of solid wastes - Quantity – factors affecting generation of solid wastes- characteristics – methods of sampling and characterization- Effects of improper disposal of solid wastes – public health effects- Principle of solid waste management – social & economic aspects - Public awareness- Role of NGOs- Legislation.					
Unit II	ON-SITE STORAGE & PROCESSING	8 Hours			
On-site storage methods – materials used for containers – on-site segregation of solid wastes – public health & economic aspects of storage – options under Indian conditions – Critical Evaluation of Options.					
Unit III	COLLECTION AND TRANSFER	8 Hours			
Methods of Collection – types of vehicles – Manpower requirement – collection routes; transfer stations – selection of location, operation & maintenance; options under Indian conditions.					
Unit IV	OFF-SITE PROCESSING	12 Hours			
Processing techniques and Equipment; Resource recovery from solid wastes – composting, incineration, Pyrolysis - options under Indian conditions.					
Unit V	DISPOSAL	9 Hours			
Dumping of solid waste; sanitary landfills – site selection, design and operation of sanitary landfills – Leachate collection & treatment					
				Total:	45 Hours
Further Reading:					
	They can categorize the types of wastes				
	They can choose the disposal units				
Course Outcomes:					
	After completion of the course, Student will be able to				
	Explain the Sources and types of municipal solid wastes				
	Interpret the suitable method of Segregation of solid waste under Indian condition.				
	Identify the methods of collection and transfer of solid wastes				
	Demonstrate the suitable Off –site Processing techniques				
	Choose the various options for disposal of wastes and their selection criteria				
References:					

Manual on Municipal Solid Waste Management, CPHEEO, Ministry of Urban Development, Government of India, New Delhi, 2000

1703CE009	GROUND WATER ENGINEERING	L	T	P	C	
		3	0	0	3	
Course Objectives:						
	1.To introduce the student to the principles of Groundwater governing Equations and Characteristics of different aquifers					
	2.Characteristics of different aquifers					
	3.To understand the techniques of development and management of groundwater					
	4.To be introduced to the different theories of traffic flow					
	5.To be aware of the importance of traffic safety					
Unit I	HYDROGEOLOGICAL PARAMETERS	9 Hours				
Introduction – Water bearing Properties of Rock – Type of aquifers - Aquifer properties – permeability, specific yield, transmissivity and storage coefficient – Methods of Estimation – Ground water table fluctuation and its interpretations – Groundwater development and Potential in India – GEC norms.						
Unit II	WELLHYDRAULICS	9Hours				
Objectives of Groundwater hydraulics – Darcy’s Law – Groundwater equation – steady state flow. Dupuit Forchheimer assumption – Unsteady state flow – Theis method – Jacob Method – Slug tests – Image well theory – Partial penetrations of wells						
Unit III	GROUNDWATER MANAGEMENT	9Hours				
Need for Management Model – Database for groundwater management – groundwater balance study – Introduction to Mathematical model – Conjunctive use – Collector well and Infiltration gallery						
Unit IV	GROUNDWATER QUALITY	9 Hours				
Ground water chemistry - Origin, movement and quality - Water quality standards – Health and aesthetic aspects of water quality - Saline intrusion – Environmental concern and Regulatory requirements						
Unit V	GROUNDWATER CONSERVATION	9 Hours				
Artificial recharge techniques – Remediation of Saline intrusion – Ground water management studies – Protection zone delineation, Contamination source inventory, remediation schemes - Ground water Pollution and legislation.						
				Total:	45 Hours	
Further Reading:						
	1. Ground water to improving quality parameter					
	2. Water resource and hydrology for features need.					
Course Outcomes:						

	1. Students will be able to understand aquifer properties and its dynamics after the completion of the course. It gives an exposure towards well design and practical problems of ground water aquifers
	2. Students will be able to understand the importance of artificial recharge and groundwater quality concepts
	3. Model regional ground water flow and design water wells
	4. Estimate water quality parameters
	5. To safety ground water improvements of quality parameter

ME ENVIRONMENTAL ENGINEERING

17EV102	ENVIRONMENTAL CHEMISTRY	L	T	P	C
		3	0	0	3
Course Objectives:					
	1. To educate the students about water chemistry				
	2. To impart knowledge in the area of air and soil chemistry				
	3. To impart knowledge on the transformation of chemicals in the environment				
Unit I	Introduction	9 Hours			
Stoichiometry and mass balance-Chemical equilibrium, acid base, solubility product (K _{sp}), heavy metal precipitation, amphoteric hydroxides, CO ₂ solubility in water and species distribution – Chemical kinetics, First order- 12 Principles of green chemistry.					
Unit II	Aquatic Chemistry	11 Hours			
Water quality parameters- environmental significance and determination; Fate of chemicals in aquatic environment, volatilization, partitioning, hydrolysis, photochemical transformation – Degradation of synthetic chemicals-Metals, complex formation, oxidation and reduction, pE – pH diagrams, redox zones – sorption- Colloids, electrical properties, double layer theory, environmental significance of colloids, coagulation.					
Unit III	Atmospheric Chemistry	7 Hours			
Atmospheric structure –chemical and photochemical reactions – photochemical smog. Ozone layer depletion – greenhouse gases and global warming, CO ₂ capture and sequestration – Acid rain- origin and composition of particulates. Air quality parameters-effects and determination.					
Unit IV	Soil Chemistry	9 Hours			
Nature and composition of soil-Clays- cation exchange capacity-acid base and ion-exchange reactions in soil – Agricultural chemicals in soil-Reclamation of contaminated land; salt by leaching-Heavy metals by electrokinetic remediation.					
Unit V	Environmental Chemicals	9 Hours			

Heavy metals-Chemical speciation –Speciation of Hg &As- Organic chemicals- Pesticides, Dioxins, PCBs, PAHs and endocrine disruptors and their Toxicity- Nano materials, CNT, titania, composites, environmental applications.	
	Total: 45 Hours
Further Reading	
	To analyze and create a solution for environmental issues.
Course Outcomes:	
	After completion of the course, Student will be able to
	1. Distinguish the chemistry involved
	2. Understand the chemistry involved in water
	3. Identify and solve the air pollution related issues
	4. Understand the soil related chemistry and issues
	5. Identify contaminating chemicals and can work out chemicals need calculations for treatment purpose

17EV103	ENVIRONMENTAL MICROBIOLOGY	L	T	P	C
		3	0	0	3
Course Objectives:					
	1. The course provides a basic understanding on microbiology relevant to environmental engineering for candidates with little prior knowledge of the subject.				
	2. The morphology, behavior and biochemistry of bacteria, fungi, protozoa, viruses, and algae are outlined.				
	3. The microbiology of wastewater, sewage sludge and solid waste treatment processes is also provided. Aspects on nutrient removal and the transmission of disease-causing organisms are also covered.				
	4. An exposure to toxicology due to industrial products and byproducts are also covered.				
	5. The course provides a basic understanding on microbiology relevant to environmental engineering for candidates with little prior knowledge of the subject.				
Unit I	Classification And Characteristics	5 Hours			
Classification of microorganisms – prokaryotic, eukaryotic, cell structure, characteristics, Preservation of microorganisms, DNA, RNA, replication, Recombinant DNA technology.					
Unit II	Microbes And Nutrient Cycles	10 Hours			
Distribution of microorganisms – Distribution / diversity of Microorganisms – fresh and marine, terrestrial – microbes in surface soil, Air – outdoor and Indoor, aerosols, biosafety in Laboratory – Extreme Environment – archaeobacteria – Significance in water supplies – problems and control. Transmissible diseases. Biogeochemical cycles----Hydrological - Nitrogen, Carbon, Phosphorus, Sulphur, Cycle – Role of Micro Organism in nutrient cycle.					
Unit III	Metabolism of Microorganisms	10 Hours			
Nutrition and metabolism in microorganisms, growth phases, carbohydrate, protein, lipid metabolism – respiration, aerobic and anaerobic-fermentation, glycolysis, Kreb’s cycle, hexose monophosphate					

pathway, electron transport system, oxidative phosphorylation, environmental factors, enzymes, Bioenergetics.		
Unit IV	Pathogens in Wastewater	10 Hours
Introduction to Water Borne pathogens and Parasites and their effects on Human, Animal and Plant health, Transmission of pathogens – Bacterial, Viral, Protozoan, and Helminths, Indicator organisms of water – Coliforms - total coliforms, E-coli, Streptococcus, Clostridium, Concentration and detection of virus. Control of microorganisms; Microbiology of biological treatment processes – aerobic and anaerobic, α -oxidation, β -oxidation, nitrification and de-nitrification, eutrophication. Nutrients Removal – BOD, Nitrogen, Phosphate. Microbiology of Sewage Sludge.		
Unit V	Toxicology	10 Hours
Ecotoxicology – toxicants and toxicity, Factors influencing toxicity. Effects – acute, chronic, Test organisms – toxicity testing, Bio concentration – Bioaccumulation, bio magnification, bioassay, bio monitoring, bioleaching.		
		Total: 45 Hours
Further Reading		
Identification and culturing of microorganisms from different sources		
Course Outcomes:		
After completion of the course, Student will be able to		
1. The candidate at the end of the course will have a basic understanding on the basics of microbiology and their diversity and on the genetic material in the living cell.		
2. The candidate would be able to understand and describe the type of microorganisms in the environment and the role of microorganisms in the cycling of nutrients in an ecosystem.		
3. The candidate would have understood the role microbial metabolism in a wastewater treatment plant.		
4. The candidate would know the role of microorganisms in contaminated water and the diseases caused.		
5. The candidate has the ability to conduct and test the toxicity due to various natural and synthetic products in the environment.

17EV104		TRANSPORT OF WATER AND WASTEWATER	L	T	P	C
			3	0	0	3
Course Objectives:						
	1. To educate the students in detailed design concepts related to water transmission mains, water distribution system, sewer networks and storm water drain					
	2. To educate the students in computer application on design.					
Unit I	General Hydraulics and Flow Measurement					8 Hours
Fluid properties; fluid flow – continuity principle, energy principle and momentum principle; frictional head loss in free and pressure flow, minor heads losses, Carrying Capacity–Flow measurement.						
Unit II	Water Transmission and Distribution					10 Hours
Need for Transport of water and wastewater-Planning of Water System –Selection of pipe materials, Water transmission main design- gravity and pumping main; Selection of Pumps- characteristics-economics; Specials, Jointing, laying and maintenance, water hammer analysis; water distribution pipe networks Design, analysis and optimization – appurtenances – corrosion prevention – minimization of water losses – leak detection Storage reservoirs.						
Unit III	Wastewater Collection and Conveyance					10 Hours
Planning factors – Design of sanitary sewer; partial flow in sewers, economics of sewer design; Wastewater pumps and pumping stations- sewer appurtenances; material, construction, inspection and maintenance of sewers; Design of sewer outfalls-mixing conditions; conveyance of corrosive wastewaters.						
Unit IV	Storm Water Drainage					7 Hours

Necessity- - combined and separate system; Estimation of storm water run-off Formulation of rainfall intensity duration and frequency relationships- Rational methods.		
Unit V	Case Studies and Software Applications	10 Hours
Use of computer software in water transmission, water distribution and sewer design – EPANET 2.0, LOOP version 4.0, SEWER, BRANCH, Canal ++ and GIS based softwares.		
		Total: 45 Hours
Further Reading		
Designing of pipelines and sewers for various project areas		
Course Outcomes:		
After completion of the course, Student will be able to		
1. Understand the fluid flow properties		
2. Design water supply main, distribution network and sewer for various field conditions		
3. Design the drainage network for wastewater		
4. Design the storm water drainage systems		
5. Troubleshooting in water and sewage transmission be able to use various computer software for the design of water and sewage network		

17EV105	PRINCIPLES AND DESIGN OF PHYSICO-CHEMICAL TREATMENT SYSTEMS	L	T	P	C
		3	0	0	3
Course Objectives:					
1. To educate the students on the principles and process designs of various treatment systems for water and wastewater					
2. To educate the students on design of treatment systems and the components comprising such systems, leading to the selection of specific process.					
Unit I	Introduction				5 Hours
Pollutants in water and wastewater – characteristics, Standards for performance - Significance of physio-chemical treatment – Selection criteria-types of reactors- reactor selection-batch- continuous type-kinetics.					
Unit II	Treatment Principles				10 Hours
Physical treatment - Screening – Mixing, Equalization – Sedimentation – Filtration – Evaporation – Incineration – gas transfer – mass transfer coefficient Adsorption – Isotherms – Membrane separation, Reverse Osmosis, nano filtration, ultra-filtration and hyper filtration electro dialysis, distillation – stripping and crystallization – Recent Advances. Principles of Chemical treatment – Coagulation flocculation – Precipitation – flotation solidification and stabilization – Disinfection, Ion exchange, Electrolytic methods, Solvent extraction – advanced oxidation /reduction – Recent Trends					
Unit III	Design of Municipal Water Treatment Plants				10 Hours
Selection of Treatment – Design of municipal water treatment plant units – Aerators – chemical feeding – Flocculation – clarifier – tube settling – filters – Rapid sand filters, slow sand filter, pressure filter, dual media Disinfection - Displacement and gaseous type - Flow charts – Layouts – Hydraulic Profile, PID - construction and O&M aspects – case studies, Residue management – Upgradation of existing plants – Recent Trends.					
Unit IV	Design of Industrial Water Treatment Plants				10Hours
Design of Industrial Water Treatment Units- Selection of process – Design of softeners – Demineralisers – Reverse osmosis plants –Flow charts – Layouts –Hydraulic Profile, PID - construction and O&M aspects – case studies, Residue management – Upgradation of existing plants – Recent Trends.					

Unit V	Design of Wastewater Treatment Plants	10 Hours
Design of municipal wastewater treatment units-screens-detritors-grit chamber-settling tanks- sludge thickening-sludge dewatering systems-sludge drying beds - Design of Industrial Wastewater Treatment Units-Equalization- Neutralization-Chemical Feeding Devices-mixers- floatation units-oil skimmer Flow charts – Layouts –Hydraulic Profile, PID, construction and O&M aspects – case studies, Retrofitting - Residue management – Upgradation of existing plants – Recent Trends.		
		Total: 45 Hours
Further Reading	Implementation of advanced treatment technologies for various wastewater treatment	
Course Outcomes:	After completion of the course, Student will be able to	
	1. Identify the pollutants type in the wastewater	
	2. Understand the various treatment principles	
	3. Design the sewage treatment plants	
	4. Design suitable treatment units for various industries	
	5. Develop conceptual schematics required for the treatment of wastewater	

17EV106	ENVIRONMENTAL CHEMISTRY LABORATORY	L	T	P	C
		0	0	2	1
Course Objectives:	1. To train in the analysis of physical parameters of water and waste water 2. To train in the analysis of chemical parameters of water and waste water				
List of Experiments:	1. Good Laboratory Practices, Quality control, calibration of Glassware 03				
	2. Sampling and Analysis of water (pH, alkalinity, hardness chloride, Sulphate, turbidity EC, TDS, nitrate, fluoride) 12				
	3. Wastewater analysis (BOD, COD, Phosphate, TKN, Oil & Grease, Surfactant and heavy metals). 12				
	4. Sampling and analysis of air pollutants Ambient & Stack (RSPM, SO ₂ and NO _x) 09				
	5. Sampling and characterization of soil (CEC & SAR, pH and K). 09				
				Total	45 Hours
				:	
Course Outcomes:	After completion of the course, Student will be able to				
	1. assess quality of environment				
	2. conduct analysis on characteristics of water and waste water				
References:	1. APHA, Standard Methods for the Examination of Water and Wastewater, 21st Ed. Washington, 2005. 2. Laboratory Manual for the Examination of water, wastewater soil Rump, H.H. and Krist, H. Second Edition, VCH, Germany, 1992. 3. Methods of air sampling & analysis, James P.Lodge Jr(Editor) 3rd Edition, Lewis publishers,Inc,USA,1989.				

17EV107		ENVIRONMENTAL MICROBIOLOGY LABORATORY	L	T	P	C
			0	0	2	1
Course Objectives:						
	1. To train in the analysis of physical parameters of water and waste water					
	2. To train in the analysis of chemical parameters of water and waste water					
List of Experiments:						
1. Preparation of culture media						
2. Isolation, culturing and Identification of Microorganisms						
3. Microorganisms from polluted habitats (soil, water and air)						
4. Measurement of growth of microorganisms, Assay of enzymes involved in biotransformation						
5. Biodegradation of organic matter in waste water Analysis of air borne microorganisms						
6. Staining of bacteria						
7. Effect of pH, temperature on microbial growth						
8. Pollutant removal using microbes from industrial effluent.						
9. Effect of pesticides on soil microorganisms						
10. Bacteriological analysis of wastewater (Coliforms, E.coli, Streptococcus) – MPN						
11. Bacteriological analysis of wastewater (Coliforms, Streptococcus) - MF techniques						
12. Effect of Heavy metals on microbial growth						
13. Detection of Anaerobic bacteria (Clostridium sp.)						
14. Bioreactors						
					Total	45 Hours
					:	
Course Outcomes:						
	After completion of the course, Student will be able to					
	1. Field oriented testing of water, wastewater and solid waste for microbial contamination.					
	2. Perform toxicity test.					
References:						
1. Standard methods for the examination of water and wastewater, American Public Health Association (21st edition) 2005.

17EV201		PRINCIPLES AND DESIGN OF BIOLOGICAL TREATMENT SYSTEMS	L	T	P	C
			3	0	0	3
Course Objectives:						
	To educate the students on the principles and process designs of various treatment systems for water and wastewater and students should gain competency in the process employed in design of treatment systems and the components comprising such systems, leading to the selection of specific process.					
Unit I	Introduction					10 Hours
Objectives of biological treatment – significance – Principles of aerobic and anaerobic treatment - kinetics of biological growth – Factors affecting growth – attached and suspended growth - Determination of Kinetic coefficients for organics removal – Biodegradability assessment -selection of process- reactors- batch-continuous type.						
Unit II	Aerobic Treatment of Wastewater					10 Hours
Design of sewage treatment plant units –Activated Sludge process and variations, Sequencing Batch reactors, Membrane Biological Reactors-Trickling Filters-Bio Tower-RBC-Moving Bed Reactors- fluidized bed reactors, aerated lagoons, waste stabilization ponds – nutrient removal systems – natural treatment systems, constructed wet land – Disinfection – disposal options – reclamation and reuse – Flow charts, layout, PID, hydraulic profile, recent trends.						
Unit III	Anaerobic Treatment of Wastewater					10 Hours
Attached and suspended growth, Design of units – UASB, up flow filters, Fluidized beds MBR, septic tank and disposal – Nutrient removal systems – Flow chart, Layout and Hydraulic profile – Recent trends.						
Unit IV	Sludge Treatment and Disposal					5 Hours
Design of sludge management facilities, sludge thickening, sludge digestion, biogas generation, sludge dewatering (mechanical and gravity) Layout, PID, hydraulics profile – upgrading existing plants – ultimate residue disposal – recent advances.						
Unit V	Construction Operations and Maintenance Aspects					10 Hours

Construction and Operational Maintenance problems – Trouble shooting – Planning, Organizing and controlling of plant operations – capacity building - Retrofitting Case studies – sewage treatment plants – sludge management facilities.		
		Total: 45 Hours
Course Outcomes:		
After completion of the course, Student will be able to		
1. Develop conceptual schematics required for biological treatment of wastewater		
2. Translate pertinent criteria into system requirements.

17EV202	AIR POLLUTION MONITORING AND CONTROL	L	T	P	C
		3	0	0	3
Course Objectives:					
To impart knowledge on the principles and design of control of indoor/particulate/gaseous air pollutant and its emerging trends					
Unit I	Introduction				7 Hours
Structure and composition of Atmosphere – Sources and classification of air pollutants - Effects of air pollutants on human health, vegetation & animals, Materials & Structures – Effects of air Pollutants on the atmosphere, Soil & Water bodies – Long- term effects on the planet – Global Climate Change, Ozone Holes – Ambient Air Quality and Emission Standards – Air Pollution Indices – Emission Inventories – Ambient and Stack Sampling and Analysis of Particulate and Gaseous Pollutants.					
Unit II	Air Pollution Modelling				5 Hours
Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns- Transport & Dispersion of Air Pollutants – Modeling Techniques - Air Pollution Climatology.					
Unit III	Control Of Particulate Contaminants				11 Hours
Factors affecting Selection of Control Equipment – Gas Particle Interaction, – Working principle, Design and performance equations of Gravity Separators (cyclone) , Centrifugal separators Fabric filters, Particulate Scrubbers, Electrostatic Precipitators – Operational Considerations - Process Control and Monitoring – Costing of APC equipment – Case studies for stationary and mobile sources.					
Unit IV	Control of Gaseous Contaminants				11 Hours
Factors affecting Selection of Control Equipment – Working principle, Design and performance equations of absorption, Adsorption, condensation, Incineration, Bio scrubbers, Bio filters – Process control and					

Monitoring - Operational Considerations - Costing of APC Equipment – Case studies for stationary and mobile sources.	
Unit V	Indoor Air Quality Management 11 Hours
Sources types and control of indoor air pollutants, sick building syndrome types – Radon Pollution and its control – Membrane process - UV photolysis – Internal Combustion Engines - Sources and Effects of Noise Pollution – Measurement – Standards –Control and Preventive measures.	
	Total: 45 Hours
Course Outcomes:	
	After completion of the course, Student will be able to
	1. Apply sampling techniques
	2. Apply modelling techniques
	3. Suggest suitable air pollution prevention equipment's and techniques for various gaseous and particulate pollutants to Industries. Discuss the emission standards

17EV203	INDUSTRIAL WASTE MANAGEMENT	L	T	P	C
		3	0	0	3
Course Objectives:					
	To impart knowledge on the concept and application of Industrial pollution prevention, cleaner technologies, industrial wastewater treatment and residue management.				
Unit I	Introduction				8 Hours
Industrial scenario in India– Industrial activity and Environment - Uses of Water by industry – Sources and types of industrial wastewater – Nature and Origin of Pollutants - Industrial wastewater and environmental impacts – Regulatory requirements for treatment of industrial wastewater – Industrial waste survey – Industrial wastewater monitoring and sampling -generation rates, characterization and variables –Toxicity of industrial effluents and Bioassay tests – Major issues on water quality management.					
Unit II	Industrial Pollution Prevention & Waste Minimisation				8 Hours
Prevention and Control of Industrial Pollution – Benefits and Barriers – Waste management Hierarchy - Source reduction techniques – Periodic Waste Minimisation Assessments – Evaluation of Pollution Prevention Options – Cost benefit analysis – Pay-back period – Implementing & Promoting Pollution Prevention Programs in Industries.					
Unit III	Industrial Wastewater Treatment				10 Hours
Flow and Load Equalization – Solids Separation – Removal of Fats, Oil & Grease- Neutralization – Removal of Inorganic Constituents – Precipitation, Heavy metal removal , Nitrogen & Phosphorous removal, Ion exchange, Adsorption, Membrane Filtration, Eletrodialysis & Evaporation – Removal of Organic Constituents – Biological treatment Processes, Chemical Oxidation Processes, Advanced Oxidation processes – Treatability Studies.					
Unit IV	Wastewater Reuse and Residual Management				9 Hours

Individual and Common Effluent Treatment Plants – Joint treatment of industrial and domestic wastewater - Zero effluent discharge systems - Quality requirements for Wastewater reuse – Industrial reuse , Present status and issues - Disposal on water and land – Residuals of industrial wastewater treatment – Quantification and characteristics of Sludge – Thickening, digestion, conditioning, dewatering and disposal of sludge – Management of RO rejects.		
Unit V	Case Studies	10 Hours
Industrial manufacturing process description, wastewater characteristics, source reduction options and waste treatment flow sheet for Textiles – Tanneries – Pulp and paper – metal finishing – Oil Refining – Pharmaceuticals – Sugar and Distilleries		
		Total: 45 Hours
Course Outcomes:		
	After completion of the course, Student will be able to	
	1. Define the Principles of pollution prevention and mechanism of oxidation processes.	
	2. Suggest the suitable technologies for the treatment of wastewater.	
	3. Discuss about the wastewater characteristics	
	4. Design the treatment systems	

17EV204	SOLID AND HAZARDOUS WASTE MANAGEMENT	L	T	P	C
		3	0	0	3
Course Objectives:					
	To impart knowledge and skills in the collection, storage, transport, treatment, disposal and recycling options for solid wastes including the related engineering principles, design criteria, methods and equipment.				
Unit I	Sources, Classification and Regulatory Framework	9 Hours			
Types and Sources of solid and hazardous wastes - Need for solid and hazardous waste management -- Salient features of Indian legislations on management and handling of municipal solid wastes, hazardous wastes, biomedical wastes, nuclear wastes - lead acid batteries, electronic wastes , plastics and fly ash – Elements of integrated waste management and roles of stakeholders - Financing and Public Private Participation for waste management.					
Unit II	Waste Characterization and Source Reduction	8 Hours			
Waste generation rates and variation - Composition, physical, chemical and biological properties of solid wastes – Hazardous Characteristics – TCLP tests – waste sampling and characterization plan - Source reduction of wastes –Waste exchange - Extended producer responsibility - Recycling and reuse.					
Unit III	Storage, Collection and Transport Of Wastes	9 Hours			
Handling and segregation of wastes at source – storage and collection of municipal solid wastes – Analysis of Collection systems - Need for transfer and transport – Transfer stations Optimizing waste allocation– compatibility, storage, labeling and handling of hazardous wastes – hazardous waste manifests and transport.					
Unit IV	Waste Processing Technologies	10 Hours			

Objectives of waste processing – material separation and processing technologies – biological and chemical conversion technologies – methods and controls of Composting - thermal conversion technologies and energy recovery – incineration – solidification and stabilization of hazardous wastes - treatment of biomedical wastes - Health considerations in the context of operation of facilities, handling of materials and impact of outputs on the environment.	
Unit V	Waste Disposal 9 Hours
Waste disposal options – Disposal in landfills - Landfill Classification, types and methods – site selection - design and operation of sanitary landfills, secure landfills and landfill bioreactors – leachate and landfill gas management – landfill closure and environmental monitoring – Rehabilitation of open dumps – landfill remediation.	
Total: 45 Hours	
Course Outcomes:	
	After completion of the course, Student will be able to
	1. Understand the characteristics of different types of solid and hazardous wastes and the factors affecting variation
	2. Define and explain important concepts in the field of solid waste management and suggest suitable technical solutions for treatment of municipal and industrial waste
	3. Understand the role legislation and policy drivers play in stakeholders' response to the waste and apply the basic scientific principles for solving practical waste management challenges

17EV205	ENVIRONMENTAL IMPACT ASSESSMENT	L	T	P	C
		3	0	0	3
Course Objectives:					
	1. To expose the students to the need, methodology, documentation and usefulness of environmental impact assessment and to develop the skill to prepare environmental management plan.				
	2. To provide knowledge related to the broad field of environmental risk assessment, important processes that control contaminant transport and tools that can be used in predicting and managing human health risks.				
Unit I	Introduction	8 Hours			
Historical development of Environmental Impact Assessment (EIA). EIA in Project Cycle. Legal and Regulatory aspects in India. – Types and limitations of EIA –.EIA process- screening – scoping - setting – analysis – mitigation. Cross sectoral issues and terms of reference in EIA – Public Participation in EIA.					
Unit II	Impact Identification and Prediction	10 Hours			
Matrices – Networks – Checklists –Cost benefit analysis – Analysis of alternatives – Software packages for EIA – Expert systems in EIA. Prediction tools for EIA – Mathematical modeling for impact prediction – Assessment of impacts – air – water – soil – noise – biological — Cumulative Impact Assessment.					
Unit III	Social Impact Assessment and EIA Documentation	8 Hours			
Social impact assessment - Relationship between social impacts and change in community and institutional arrangements. Individual and family level impacts. Communities in transition Documentation					

of EIA findings – planning – organization of information and visual display materials – Report preparation.	
Unit IV	Environmental Management Plan 7 Hours
Environmental Management Plan - preparation, implementation and review – Mitigation and Rehabilitation Plans – Policy and guidelines for planning and monitoring programmes – Post project audit – Ethical and Quality aspects of Environmental Impact Assessment- Case Studies.	
Unit V	Environmental Risk Assessment and Management 12 Hours
Environmental risk assessment framework-Hazard identification -Dose Response Evaluation – Exposure Assessment – Exposure Factors, Tools for Environmental Risk Assessment– HAZOP and FEMA methods – Event tree and fault tree analysis – Multimedia and multipathway exposure modeling of contaminant- Risk Characterization Risk communication - Emergency Preparedness Plans –Design of risk management programs.	
Total: 45 Hours	
Course Outcomes:	
	After completion of the course, Student will be able to
	1. Understand the necessity to study the impacts and risks that will be caused by projects or industries and the methods to overcome these impacts.
	2. Know about the legal requirements of Environmental and Risk Assessment for projects.

17EV206	UNIT OPERATIONS AND PROCESSES LABORATORY	L	T	P	C
		0	0	2	1
Course Objectives:					
	1. To develop the skill for conducting Treatability studies of water and wastewater treatment by various Unit Operations and Processes using laboratory scale models.				
	2. To develop the skill for conducting Treatability studies of water and wastewater treatment by various Unit Operations and Processes using laboratory scale models.				
List of Experiments:					
	1. Coagulation and Flocculation	7			
	2. Batch studies on settling	10			
	3. Studies on Filtration- Characteristics of Filter media	7			
	4. Water softening	7			
	5. Adsorption studies/Kinetics	7			
	6. Reverse Osmosis- Silt Density Index	7			
	7. Kinetics of suspended growth process (activated sludge process)- Sludge volume Index	14			
	8. Anaerobic Reactor systems / kinetics (Demonstration)	10			

9. Advanced Oxidation Processes – (Ozonation, Photocatalysis)		14
10. Disinfection for Drinking water		7
		Total : 45 Hours
Course Outcomes:		
	After completion of the course, Student will be able to	
	1. Conduct treatability studies for water and waste water treatment.	
	2. Design laboratory models for various unit operations and processes.

17EV001	AIR POLLUTION METEOROLOGY AND MODELING	L	T	P	C
		3	0	0	3
Course Objectives:					
	To introduce the emerging concepts of climate modeling and projecting future climate change, understand data analysis and application.				
Unit I	Atmospheric Pollution				9 Hours
Atmospheric Pollution, type of pollutants, gaseous and particulate pollutants, size of atmospheric particles, emission inventory, various sources of emissions, bio-mass burning, pollution formation in combustion, Visibility and Acid Deposition Industrial pollution.					
Unit II	Meteorology				9 Hours
Air pollution meteorology: sources of air pollution, methods for air pollution measurement and control, meteorological factors that contribute to air quality degradation, basic chemistry of the atmosphere and how it contributes to secondary pollutant formation. Effect of air pollution on Human health, material and vegetation, Deposition of particulate pollutants in the respiratory system.					
Unit III	Transport Models				9 Hours

Atmospheric chemical transport models, box models, three-dimensional atmospheric chemical transport models, components of air quality forecasting and modelling, evaluation and validation, air quality standards and index, long range transport of pollutants. Back trajectory construction and applications		
Unit IV	Dispersion Models	9 Hours
Transport and dispersion of air pollutants - wind velocity, wind speed and turbulence; estimating concentrations from point sources - the Gaussian Equation - atmospheric stability - Air pollution modelling and prediction - Plume rise, modelling techniques.		
Unit V	Software Modelling	9 Hours
Exposure to computer models for air quality.		
		Total: 45 Hours
Course Outcomes:		
After completion of the course, Student will be able to		
1. Know the causes of climate change		
2. Know the effects of climate change on various environments and various models.		
References:		
1. Rao.M.N. &RaoH.V.N., "Air Pollution", Tata McGraw Hill,2006.

17EV002	CLIMATE CHANGE AND MODELING	L	T	P	C
		3	0	0	3
Course Objectives:					
To introduce the emerging concepts of climate modeling and projecting future climate change, understand data analysis and application.					
Unit I	Climate Change and Climate Variability				9 Hours
Introduction – Atmosphere - weather and Climate - climate parameters (Temperature ,Rainfall, Humidity, Wind etc) – Equations governing the atmosphere - Numerical Weather Prediction Models - Introduction to GCMs - Application in Climate Change Projections.					
Unit II	IPCC SRES Scenarios				9 Hours
Intergovernmental Panel on Climate Change (IPCC) - An Overview - Key Assumptions - Scenario Family - Storyline (A1, B1, A2, B2).					
Unit III	Global Climate MODEL (GCM) and Regional Climate Model (RCM)				9 Hours

Some typical GCMs (HadCM3Q-UK Met Office) - Issues with GCMs - Introduction to RCMs and LAMs - some typical RCMs like PRECIS, Sim CLIM, MAGICC/SCENGENE - Advantages and Disadvantages of GCMs and RCMs.			
Unit IV	Downscaling Global Climate Model - An Overview		9 Hours
Need for downscaling - Selection of GCMs for regional climate change studies - Ensemble theory – Selection of - Ensembles, Model Domain (Spatial domain and temporal domain), Resolution and climate variables - Lateral boundary conditions - Methods of downscaling (Statistical and Dynamical) - examples from each and their limitations.			
Unit V	Analysis /Post Processing		9 Hours
a. Model validation - post processing – Introduction to Analysis tools - Ferret, R, Grads, IDL, SPSS, ArcGIS b. Climate change Impact - Vulnerability assessment – adaptation strategies.			
			Total: 45 Hours
Course Outcomes:			
After completion of the course, Student will be able to			
1.Know the causes of climate change			
2.Know the effects of climate change on various environments and various models.			
References:			
1. IPCC Fourth Assessment Report, Cambridge University Press, Cambridge, UK.			
2. McGuffie, K. and Henderson-Sellers, A. “A Climate Modelling Primer, Third Edition, John Wiley & Sons, Ltd, Chichester, UK. ,2005

17EV005		ENVIRONMENTAL POLICIES AND LEGISLATION	L	T	P	C
			3	0	0	3
Course Objectives:						
To impart knowledge on the policies, legislations, institutional frame work and enforcement mechanisms for environmental management in India.						
Unit I	Introduction					9 Hours
Indian Constitution and Environmental Protection – National Environmental policies – Precautionary Principle and Polluter Pays Principle – Concept of absolute liability – multilateral environmental agreements and Protocols – Montreal Protocol, Kyoto agreement, Rio declaration– Environmental Protection Act, Water (P&CP) Act, Air (P&CP) Act – Institutional framework(SPCB/CPCB/MoEF)						
Unit II	Water (P&CP) Act, 1974					8 Hours
Power & functions of regulatory agencies - responsibilities of Occupier Provision relating to prevention and control Scheme of Consent to establish, Consent to operate – Conditions of the consents – Outlet –						

Legal sampling procedures, State Water Laboratory – Appellate Authority – Penalties for violation of consent conditions etc. Provisions for closure/directions in apprehended pollution situation.			
Unit III	Air (P&CP) Act, 1981		8 Hours
Power & functions of regulatory agencies - responsibilities of Occupier Provision relating to prevention and control Scheme of Consent to establish, Consent to operate – Conditions of the consents – Outlet – Legal sampling procedures, State Air Laboratory – Appellate Authority – Penalties for violation of consent conditions etc. Provisions for closure/directions in apprehended pollution situation			
Unit IV	Environment (Protection) Act 1986		13 Hours
Genesis of the Act – delegation of powers – Role of Central Government - EIA Notification – Sitting of Industries – Coastal Zone Regulation - Responsibilities of local bodies mitigation scheme etc., for Municipal Solid Waste Management - Responsibilities of Pollution Control Boards under Hazardous Waste rules and that of occupier, authorization – Biomedical waste rules – responsibilities of generators and role of Pollution Control Boards			
Unit V	Other Topics		7 Hours
Relevant Provisions of Indian Forest Act, Public Liability Insurance Act, CrPC, IPC -Public Interest Litigation - Writ petitions - Supreme Court Judgments in Landmark cases.			
			Total: 45 Hours
Course Outcomes:			
After completion of the course, Student will be able to			
1. Know the National environmental legislations and the policies			
2. plan programmes to comply with the legal requirements related to organizations			

17EV008		MEMBRANE TECHNOLOGIES FOR WATER AND WASTE WATER TREATMENT	L	T	P	C
			3	0	0	3
Course Objectives:						
To introduce the concept and principles of membrane separation and its applications in water and wastewater treatment.						
Unit I	Membrane Filtration Processes					10 Hours
Solid Liquid separation systems- Theory of Membrane separation – mass Transport Characteristics- Cross Flow filtration - Membrane Filtration- Flux and Pressure drop -Types and choice of membranes, porous, non-porous, symmetric and asymmetric – Plate and Frame, spiral wound and hollow fibre membranes – Liquid Membranes						
Unit II	Membrane Systems					10 Hours
Microfiltration principles and applications – Ultra filtration principles and applications - Nano Filtration principles and applications – Reverse Osmosis: Theory and design of modules, assembly, plant						

process control and applications – Electro dialysis : Ion exchange membranes, process design- Pervaporation – Liquid membrane – Liquid Pertraction – Supported Liquid Membrane and Emulsion Liquid membrane - Membrane manufactures – Membrane Module/Element designs – Membrane System components – Design of Membrane systems - pump types and Pump selection– Plant operations – Economics of Membrane systems		
Unit III	Membrane Bioreactors	9 Hours
Introduction and Historical Perspective of MBRs, Biotreatment Fundamentals, Biomass Separation MBR Principles, Fouling and Fouling Control, MBR Design Principles, Design Assignment, Alternative MBR Configurations, Commercial Technologies, Case Studies.		
Unit IV	Pretreatment Systems	8 Hours
Membrane Fouling – Control of Fouling and Concentration Polarisation-Pretreatment methods and strategies – monitoring of Pretreatment – Langlier Index, Silt Density Index, Chemical cleaning , Biofoulant control.		
Unit V	Case Studies	8 Hours
Case studies on the design of membrane-based water and wastewater treatment systems – zero Liquid effluent discharge Plants – Desalination of brackish water.		
		Total: 45 Hours
Course Outcomes:		
After completion of the course, Student will be		
1. familiar with main membrane processes, principles, separation mechanisms, and applications		
2. understand the selection criteria for different membrane processes		
3. know the principle of the most common membrane applications		
4. Carry out design of project for a particular membrane technology application.		

17EV009	REMOTE SENSING AND GIS APPLICATIONS IN ENVIRONMENTAL MANAGEMENT	L	T	P	C
		3	0	0	3
Course Objectives:					
1. To educate the students on aspects of Remote Sensing					
2. Develop the different remote sensing technique					
3. To educate the students on aspects of GIS and data management					
4. Develop the GIS Applications for monitoring and management of environment					
Unit I	Remote Sensing Elements	8 Hours			
Historical Perspective, Principles of remote sensing, components of Remote Sensing, Energy source and electromagnetic radiation, Electromagnetic spectrum, Energy interaction, Spectral response pattern of earth surface features, Energy recording technology.					
Unit II	Remote Sensing Technology	9 Hours			

Classification of Remote Sensing Systems, Aerial photographs, Photographic systems – Across track and along track scanning, Multispectral remote sensing, Thermal remote sensing, Microwave remote sensing – Active and passive sensors, RADAR, LIDAR		
Unit III	Social Impact Assessment and EIA Documentation	9 Hours
Social impact assessment - Relationship between social impacts and change in community and institutional arrangements. Individual and family level impacts. Communities in transition Documentation of EIA findings – planning – organization of information and visual display materials – Report preparation.		
Unit IV	Environmental Management Plan	10 Hours
Environmental Management Plan - preparation, implementation and review – Mitigation and Rehabilitation Plans – Policy and guidelines for planning and monitoring programmes – Post project audit – Ethical and Quality aspects of Environmental Impact Assessment- Case Studies.		
Unit V	Environmental Risk Assessment and Management	9 Hours
Environmental risk assessment framework-Hazard identification -Dose Response Evaluation – Exposure Assessment – Exposure Factors, Tools for Environmental Risk Assessment– HAZOP and FEMA methods – Event tree and fault tree analysis – Multimedia and multipath way exposure modeling of contaminant- Risk Characterization Risk communication - Emergency Preparedness Plans –Design of risk management programs.		
		Total: 45 Hours
Course Outcomes:		
	After completion of the course, Student will be able to	
	1. Understand the necessity to study the impacts and risks that will be caused by projects or industries and the methods to overcome these impacts.	
	2. Know about the legal requirements of Environmental and Risk Assessment for projects.
