ABOUT THIS COURSE

This course is designed to start you on a path toward future studies in web development and design, no matter how little experience or technical knowledge you currently have. The web is a very big place, and if you are the typical internet user, you probably visit several websites every day, whether for business, entertainment or education. But have you ever wondered how these websites actually work? How are they built? How do browsers, computers, and mobile devices interact with the web? What skills are necessary to build a website? With almost 1 billion websites now on the internet, the answers to these questions could be your first step toward a better understanding of the internet and developing a new set of internet skills.

By the end of this course you'll be able to describe the structure and functionality of the world wide web, create dynamic web pages using a combination of HTML, CSS, and Scripting language, apply essential programming language concepts when creating HTML forms, select an appropriate web hosting service, and publish your webpages for the world to see. Finally, you'll be able to develop a working model for creating your own personal or business websites in the future and be fully prepared to take the next step in a more advanced web development or design course or specialization.

HTML INTRODUCTION

What is HTML?

- HTML stands for **Hyper Text Markup Language**
- HTML is the standard markup language for creating Web pages
- HTML describes the structure of a Web page
- A markup language is a set of **markup tags**.
- HTML uses **markup tags to describe web pages**.
- HTML consists of a series of elements
- HTML elements tell the browser how to display the content
- HTML is **not case sensitive language**.
- HTML documents **contain HTML tags and plain text**.
- HTML tags are keywords surrounded by angle brackets like <html>

```

Example Explained

- The HTML `
` element defines a line break.
- Use `
` if you want a line break (a new line) without starting a new paragraph:
- The `
` tag is an empty tag, which means that it has no end tag.

- The text inside a `<pre>` element is displayed in a fixed-width font (usually Courier), and it preserves both spaces and line breaks:
