Nagapattinam (Dt) Tamil Nadu.

1704CA108

**LIFE SKILL I – BUSINESS ENGLISH**

L	T	P	C
0	0	2	1

**COURSE OBJECTIVES:**

1. To help students understand and develop the necessary skills to equip them for whatever career path they choose.
2. To guide students in making responsible decisions, to create a desire and to fulfill individual goals by improving their soft skill.
3. To get better students reading, listening, writing and speaking skills by breaking their barriers.
4. To help students improve their problem solving skills by ignite their minds through aptitude sessions.

**UNIT I**

**4 HOURS**

Career Opportunities  
Industry Expectations

**UNIT II SOFT SKILL TRAINING**

**6 HOURS**

Introduction to Soft Skill – motivational programming – personality development – self confidentiality – inner confidence beauty.

**UNIT III GOAL SETTING**

**4 HOURS**

Environmental awareness – Genetic Engineering – people management – time management - domain management – communication skills – trait attitude skills & videos

**UNIT IV**

**8 HOURS**

Communication skills – ICE breaking and activity sheets.

**UNIT V APTITUDE**

**8 HOURS**

Numbers: basics – H.C.F & L.C.M of numbers- Decimal fractions and problems on numbers.

**TOTAL: 30 HOURS**

**COURSE OUTCOMES:**

- Skill Development*
- On the successful completion of the course, students will be able to
- CO1: Understand how to make out opportunities in their career path.
  - CO2: Apply their soft skills in making decision in order to solve issues in their everyday life.
  - CO3: To some extent improvement in their reading, writing and speaking skills
  - CO4: Started to solve problems in a swift way.

<b>1702CA102</b>	<b>PROBLEM SOLVING AND C PROGRAMMING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

1. To understand the various problem solving techniques.
2. To understand the usage of top down design technique in problem solving.
3. To learn the syntax of C.
4. To get exposed to the file processing techniques of C.
5. To get familiarized with the pre-processor directives.

**UNIT I PROBLEM SOLVING 9 Hours**

Introduction – The Problem–Solving Aspect – Top-Down Design – Implementation of Algorithms – Program Verification – The Efficiency of Algorithms – The Analysis of Algorithms.

**UNIT II BASICS OF C PROGRAMMING 9 Hours**

Introduction– Keywords – Identifiers – Basic Data Types in C – Variables – Constants – Input / Output Statements in C – Operators in C – Conditional Branching Statements – Iterative Statements – Nested Loops – The Break and Continue Statements - Goto Statement.

**UNIT III FUNCTIONS, ARRAYS AND STRINGS 9 Hours**

Functions-Definitions - Prototypes – Passing Parameters to the Function – Scope of Variables – Storage Classes – Recursive Functions - Arrays – Declaration – Usage – Passing Arrays to Functions – Reading and Writing Strings – String Operations.

**UNIT IV POINTERS AND AGGREGATE DATA TYPES 9 Hours**

Pointer Variable Declarations and Initialization – Operators – Uses - Pointer Expressions and Pointer Arithmetic – Relationship between Pointers and Arrays – Arrays of Pointers – Pointers to Functions - Structures-Definition – Initialization – Unions – Bitwise Operators – Enumeration Constants.

**UNIT V FILES AND PREPROCESSOR DIRECTIVES 9 Hours**

Introduction to Files – Using Files in C – Read and Write Data with Files - Random Access Files – Types of Pre-processor Directives –#define - # include- Conditional Directives.

**TOTAL: 45 HOURS**

**FURTHER READING:**

1. Apply Graphics commands in C language.
2. Demonstration of Test Data on programs.

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Design and implement C programs for a given problem.
  - CO2: Work with existing programs and modify it as per the requirements.
  - CO3: Identify the errors in a C program.
  - CO4: Identify the output of a C program without actually executing it.

E.G.S. Pillay Engineering College,  
Thethi, Nagarc - 611 002,  
Nagapattinam (Dt) Tamil Nadu.

1702CA103

**DATABASE MANAGEMENT SYSTEMS**

L	T	P	C
3	0	0	3

**COURSE OBJECTIVES:**

1. To learn the fundamentals of data models and to conceptualize and depict a database system using ER diagram.
2. To make a study of SQL and relational database design.
3. To understand the internal storage structures using different file and indexing techniques which will help in physical DB design.
4. To know the fundamental concepts of transaction processing - concurrency control techniques and recovery procedure.
5. To have an introductory knowledge about the Storage and Query processing Techniques.

**UNIT I RELATIONAL DATABASES**

9 Hours

Purpose of Database System – Views of data – Data Models – Database System Architecture – Entity Relationship model – E-R Diagrams - Introduction to relational databases - The relational Model – Keys - Relational Algebra – Relational Calculus – SQL fundamentals - Advanced SQL features – Embedded SQL – Dynamic SQL.

**UNIT II DATABASE DESIGN**

9 Hours

Functional Dependencies – Non-loss Decomposition – Functional Dependencies – First – Second - Third Normal Forms - Dependency Preservation – Boyce/Codd Normal Form - Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form.

**UNIT III DATA STORAGE AND QUERYING**

9 Hours

Overview of Physical Storage Media – RAID – File Organization – Organization of Records in Files – Indexing and Hashing – Ordered Indices – B+ tree Index Files – B tree Index Files – Static Hashing – Dynamic Hashing – Query Processing Overview – Measures of Query Cost- Selection Operation, Sorting, Join operation.

**UNIT IV TRANSACTION MANAGEMENT**

9 Hours

Transaction Concepts - Transaction State – Implementation of Atomicity and Durability – Concurrent Executions- Serializability- Recoverability- Implementation of Isolation- Testing for Serializability- Lock Based Protocols- Time-Stamp based Protocols- Deadlock Handling-Failure Classification- Storage Structure-Recovery and Atomicity-Log-Based Recovery-Recovery with Concurrent Transactions.

**UNIT V ADVANCED TOPICS**

9 Hours

OODBMS- Object-Based Databases - OO Data Model - OO Languages – Persistence – Object Relational Databases - XML – Structure of XML - Temporal Databases – Mobile Databases – Spatial Databases – Case Study for Design and Manage the Database for any Project.

**TOTAL: 45 HOURS**

**FURTHER READING:**

1. Data mining and Warehousing
2. Big Data

**COURSE OUTCOMES:**

- Employability
- On the successful completion of the course, students will be able to
- CO1: Design and create tables in relational database and query them.
  - CO2: Know how transaction processing and concurrency control is done.
  - CO3: Compare different types of databases.

1702CA104	DATA STRUCTURES	L	T	P	C
		2	2	0	3

**COURSE OBJECTIVES:**

1. To gain comprehensive introduction of common data structures
2. To master the linear and hierarchical data structures and its applications
3. To learn about sorting techniques and disjoint set ADT

**UNIT I LINEAR DATA STRUCTURES – LIST, STACK AND QUEUE 12 Hours**

Abstract Data Types (ADTs) – List ADT – Array-Based Implementation – Linked List Implementation – Doubly-Linked Lists – Circular Linked Lists – Applications – Cursor-Based Implementation of Linked Lists – Stack ADT: Implementation of Stacks – Applications - Queue ADT: Implementation of Queues – Applications of Queues-Priority Queues.

**UNIT II HIERARCHICAL DATA STRUCTURES 12 Hours**

Trees: Preliminaries – Implementation of Trees – Tree Traversals with an Application – Binary Trees: Implementation – Expression Trees – Search Tree ADT: Binary Search Trees.

**UNIT III SORTING AND HASHING 12 Hours**

Sorting – Bubble sort - Quick Sort - Insertion Sort – Heap sort – Hashing -Hashing functions - Collision Resolution Techniques - Separate chaining - Open addressing – Multiple hashing.

**UNIT IV GRAPHS 12 Hours**

Definitions – Representation of graph - Graph Traversals - Depth-first traversal – breadth-first traversal - applications of graphs - Topological sort – shortest-path algorithms – minimum spanning tree – Prim's and Kruskal's algorithms – Biconnectivity – Euler circuits.

**UNIT V ADVANCED DATA STRUCTURES 12 Hours**

AVL Trees – B-Tree – R-B Tree - Binary Heap - D Heaps – Leftist Heaps – Skew Heaps – Binomial Heap

**TOTAL: 60 HOURS**

**FURTHER READING:**

1. Implementation of the data structures in different language platforms

**COURSE OUTCOMES:**

*Employability*

On the successful completion of the course, students will be able to

- CO1: Describe, explain and use abstract data types including stacks, queues and lists
- CO2: Design and Implement Tree data structures and Sets
- CO3: Implement hashing techniques and heaps for applications
- CO4: Implement a variety of algorithms for sorting

1704CA208

**Life Skill II- Verbal Ability**

**L T P C**  
**0 0 2 0**

**Course Objective (s):**

1. To help students comprehend and use vocabulary words in their day to day communication.
2. To apply appropriate reading strategies for interpreting technical and non-technical documents used in job-related settings.
3. To ensure students will be able to use targeted grammatical structures meaningfully and appropriately in oral and written production.
4. To enable the students to arrange the sentences in meaningful unit and to determine whether constructions rely on active or passive voice
5. To Apply the principles of effective business writing to hone communication skills

**Course Outcomes:**

1. Students are enabled to use new words in their day to day communication.
2. Students are capable to gather information swiftly while reading passages.
3. Students are proficient during their oral and written communication.
4. Students are equipped to rearrange the sentences and able to identify the voice of the sentence.
5. Students use their knowledge of the best practices to craft effective business documents

**SKILL DEVELOPMENT**

**Unit 1 VOCABULARY USAGE**

6

Introduction - Synonyms and Antonyms based on Technical terms – Single word Substitution – Newspaper, Audio and video listening activity.

**Unit 2 COMPREHENSION ABILITY**

6

Skimming and Scanning – Social Science passages – Business and Economics passages – latest political and current event based passages – Theme detection – Deriving conclusion from passages

**Unit 3 BASIC GRAMMAR AND ERROR DETECTION**

6

Parallelism – Redundancy – Ambiguity – Concord - Common Errors – Spotting Errors – Sentence improvement – Error Detection FAQ in Competitive exams.

**Unit 4 REARRANGEMENT AND GENERAL USAGE**

6

Jumble Sentences – Cloze Test - Idioms and Phrases – Active and passive voice – Spelling test.

**Unit 5 APPLICATION OF VERBAL ABILITY**

6

Business Writing - Business Vocabulary - Delivering Good / Bad News - Media Communication - Email Etiquette – Report Writing - Proposal writing – Essay writing– Indexing –Market surveying.

1702CA201

**COMPUTER COMMUNICATION AND NETWORKS**

L	T	P	C
3	0	0	3

**COURSE OBJECTIVES:**

1. To explore various data communication techniques
2. To know network fundamentals and protocols
3. To understand network addressing and routing concepts
4. To understand the requirement of reliable and unreliable communication
5. To understand the functionality and concepts of various application layer protocols

**UNIT I DATA COMMUNICATIONS**

**9 Hours**

Data communications and Networking: Communication model, Data transmission concepts and terminology, Transmission media, Data encoding techniques – Digital data communication techniques: Error detection and correction, Line configurations – Multiplexing: FDM, TDM, Statistical TDM.

**UNIT II NETWORK FUNDAMENTALS**

**9 Hours**

Network Architecture: The OSI model, TCP/IP model – Network interface layer: Framing – Reliable transmission: stop and wait protocol, sliding window protocols – MAC: Ethernet, Token ring, Wireless LAN, Blue Tooth – Bridges.

**UNIT III DATA LINK LAYER**

**9 Hours**

Data link control - Flow Control – Error Detection and Error Correction - MAC – Ethernet, Token ring, Wireless LAN MAC – Blue Tooth - Bridges.

**UNIT IV NETWORK LAYER**

**9 Hours**

Network layer functions – circuit switching – packet switching – IP datagram – IPv4 – Sub netting and classless addressing – IPv6 – ARP – Routing protocols: distance vector, link state – ICMP – ICMPv6.

**UNIT V TRANSPORT LAYER AND APPLICATION LAYER**

**9 Hours**

Transport Layer: Duties of transport layer– User Datagram Protocol – Transmission Control Protocol – Congestion – Congestion control. Application Layer: Application layer Protocols – World Wide Web and HTTP – FTP – Domain name system– Telnet –Electronic mail protocols – SNMP

**TOTAL: 45 HOURS**

**FURTHER READING:**

Multimedia in the Internet – real-time interactive protocols – Session Initialization Protocol (SIP) – Peer-to-Peer Paradigm: Chord, Pastry – Transport layer security – Application layer security.

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Explain how communication works in data networks and the Internet
  - CO2: Explain the role of protocols in data networks
  - CO3: Describe the importance of addressing and naming schemes at various layers of data networks.
  - CO4: Describe the protocols and services provided by the application layer in the OSI model and describe how this layer operates in sample networks.

OPERATING SYSTEMS

L T P C  
3 0 0 3

COURSE OBJECTIVES:

1. To Learn the Operating System basics.
2. To Study the process management of Operating system .
3. To Gain knowledge in storage management and I/O systems of Operating system
4. To Explore the case studies with various operating systems

UNIT I OPERATING SYSTEMS OVERVIEW

9 Hours

Operating system -Types of Computer Systems - Computer-system operation - I/O structure -Hardware Protection - System components - System calls - System programs - System structure- Process concept - Process scheduling - Operations on processes - Cooperating processes - Inter-process communication - Communication in client-server systems - Threads-Multithreading Models-Thread Libraries-Threading Issues.

UNIT II PROCESS MANAGEMENT

9 Hours

Scheduling criteria - Scheduling algorithms - Multiple-processor scheduling - Real time scheduling -Thread Scheduling- Process Scheduling Models - The critical- section problem - Synchronization hardware - Semaphores - Classic problems of Synchronization - Critical regions - Monitors-Usage-Dining philosopher solution using monitor -Deadlock - Deadlock characterization - Methods for handling deadlocks - Recovery from deadlock

UNIT III STORAGE MANAGEMENT

9 Hours

Memory Management - Swapping - Contiguous memory allocation - Paging - Segmentation - Segmentation with paging- Virtual Memory - Background - Demand paging - Process creation - Page replacement - Allocation of frames - Thrashing:

UNIT IV FILE AND I/O SYSTEMS

9 Hours

File concept - Access methods - Directory structure - File-system mounting - Protection - Directory implementation - Allocation methods - Free-space management -Secondary Storage Structure-Mass Storage-Disk Storage and Attachment- Disk scheduling - Disk management - Swap-space management

UNIT V CASE STUDY

9 Hours

The Linux System - History - Design Principles - Kernel Modules - Process Management - Scheduling - Memory management - File systems - Input and Output - Inter-process Communication - Network Structure - Security - Windows 7 - History - Design Principles - System Components - Environmental subsystems - File system - Networking.

TOTAL: 45 HOURS

FURTHER READING:

The course doesn't cover the modern operating system like Mobile and Embedded OS and hence it will be provided us additional content.

COURSE OUTCOMES:

- Employability
- On the successful completion of the course, students will be able to
- CO1: Explain the basics of OS.
  - CO2: Able to demonstrate the mapping between the physical memory and virtual memory
  - CO3: Able to understand the operating system components and services with the recent OS
  - CO4: Able to understand file handling concepts in OS perspective

1702CA203

**SOFTWARE ENGINEERING METHODOLOGIES**

L T P C  
3 0 0 3

**COURSE OBJECTIVES:**

1. To provide an insight into the processes of software development.
2. To understand and practice the various fields such as analysis, design, development, testing of Software Engineering.
3. To develop skills to construct software of high quality with high reliability.
4. To apply metrics and testing techniques to evaluate the software.

**UNIT I INTRODUCTION**

9 Hours

Software Engineering – Product and process – process models - Waterfall Life cycle model – Spiral Model – Prototype Model – fourth Generation Techniques – Agile methods.

**UNIT II REQUIREMENT ANALYSIS**

9 Hours

Software Requirements Analysis and Specification – Software Requirements – Problem Analysis – Requirements Specification – Validation – Metrics – Summary.

**UNIT III SOFTWARE DESIGN**

9 Hours

Abstraction – Modularity – Software Architecture – Cohesion – Coupling – Various Design Concepts and notations – Real time and Distributed System Design – Documentation – Dataflow Oriented design – Designing for reuse – Programming standards.

**UNIT IV SOFTWARE TESTING**

9 Hours

Coding – Programming Practice – Top-down and Bottom-up - structured programming – Information Hiding – Programming style – Internal Documentation Verification – Code Reading – Static Analysis – Symbolic Execution – Code Inspection or Reviews – Unit Testing – Fundamentals – Functional Testing versus structural Testing Coding.

**UNIT V SOFTWARE MAINTENANCE AND SOFTWARE METRICS**

9 Hours

Need for Software maintenance – Maintenance models - SCM – Version Control – SCM process – Software Configuration Items – Taxonomy – Basics of Case tools - Scope of Software Metrics – Classification of metrics – Measuring Process and Product attributes – Direct and Indirect measures – Reliability – Software Quality Assurance – Standards.

**TOTAL: 45 HOURS**

**FURTHER READING:**

Case Study for Project Plan and SRS, Design of any Application Project, Testing Techniques, COCOMO model, Web Engineering

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Understand the basic concepts of various models in software engineering.
- CO2: Model the software projects into high level design using DFD,UML diagrams.
- CO3: Evaluate the system with various testing techniques and strategies
- CO4: Apply various software metrics on software quality products.

**DESIGN AND ANALYSIS OF ALGORITHMS**

L	T	P	C
3	0	0	3

**COURSE OBJECTIVES:**

1. To understand the problem solving process and writing algorithms
2. To use algorithm design paradigms for algorithm design
3. To analyze the algorithms for time/space complexity

**UNIT I ALGORITHM ANALYSIS**

9 Hours

The Role of Algorithms in Computing – Insertion sort – Analyzing algorithms – Designing Algorithms – Growth of Functions – Asymptotic Notation – Standard Notations and Common Functions

**UNIT II HEAP SORT AND QUICK SORT**

9 Hours

Heap Sort: Heaps – Maintaining the Heap Property – Building a Heap – Heap Sort Algorithm – Priority Queues – Quick Sort: Description – Performance – Randomized Version – Analysis

**UNIT III DESIGN AND ANALYSIS TECHNIQUES**

9 Hours

Introduction to Dynamic Programming – Matrix Chain Multiplication – Longest Common Subsequence – Greedy Algorithms – Activity Selection Problem – Huffman Codes

**UNIT IV GRAPH ALGORITHMS**

9 Hours

Representation of Graphs – Representing Attributes – Breadth-First Search – Breadth-First Trees – Depth-First Search – Topological Sort – Strongly Connected Components – Minimum Spanning Trees: Growing a Minimum Spanning Trees – Algorithms of Kruskal and Prim – Single Source Shortest Path – Bellman-Ford Algorithm – Single Source Shortest Path in Directed Acyclic Graphs – Dijkstra's Algorithm

**UNIT V NP PROBLEMS**

9 Hours

Polynomial Time – Polynomial-time Verification – NP - completeness and Reducibility – NP- Completeness Proofs – NP-complete Problems – Approximation Algorithms – Vertex Cover Problem-Clique decision problem-Node Cover-Chromatic number decision Problem.

**TOTAL: 45 HOURS**

**FURTHER READING:**

Backtracking, Branch and Bound Method

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Analyze the algorithms for time/space complexity.
  - CO2: Implement heap sort and quick sort.
  - CO3: Design algorithms using dynamic programming and Greedy approaches and graph structure to solve real-life problems.
  - CO4: Analyze problems in terms of polynomial time.

**DATA MINING TECHNIQUES**

**L T P C**  
**3 0 0 3**

**PREREQUISITE :**

Database Management Techniques

**COURSE OBJECTIVES:**

1. To Understand Data mining principles and techniques and Introduce DM as a cutting edge Business intelligence
2. To expose the students to the concepts of Data warehousing Architecture and Implementation.
3. To know the data mining techniques in details for better organization and retrieval of data
4. To learn to use association rule mining for handling large data
5. To identify Business applications and Trends of Data mining.

**UNIT I DATA MINING & DATA PREPROCESSING**

**8 Hours**

Introduction to KDD process – Knowledge Discovery from Databases - Need for Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction.

**UNIT II ASSOCIATION RULE MINING**

**10 Hours**

Introduction - Data Mining Functionalities - Association Rule Mining –Market Basket Analysis – Mining Frequent Item sets with Candidate Generation –Mining Frequent Item sets without Candidate Generation Mining Various Kinds of Association Rules

**UNIT III CLASSIFICATION & PREDICTION**

**10 Hours**

Classification Vs Prediction – Data preparation for Classification and Prediction –Naïve Bayes Classifier– Classification by Decision Tree Introduction –Associative Classification – Support Vector Machines – Prediction: Introduction –Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Model Section

**UNIT IV CLUSTERING**

**9 Hours**

Cluster Analysis - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods– Grid-Based Methods –Clustering High- Dimensional Data – Constraint-Based Cluster Analysis – Outlier Analysis.

**UNIT V OPEN SOURCE DATA MINING TOOLS**

**8 Hours**

Introduction –Rapid Miner-Attributes-Modeling-Design and Analysis process-Visualization

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR :**

Bootstrap

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Preprocess the data for mining applications
- CO2: Apply the association rules for mining the data
- CO3: Design and deploy appropriate classification techniques
- CO4: Cluster the high dimensional data for better organization of the data
- CO5: Able to understand the Open Source Mining tools

**OBJECT ORIENTED ANALYSIS AND DESIGN**

L	T	P	C
3	0	0	3

**PREREQUISITE :**

Software Engineering Methodologies

**COURSE OBJECTIVES:**

1. To provide a brief, hands-on overview of object-oriented analysis in software process
2. To discuss Case studies based project specifications to develop object-oriented models
3. To identify implementation strategies.
4. To demonstrate and apply basic object oriented techniques to create and modify object oriented analysis and design models.
5. To understand and apply testing techniques for object oriented software

**UNIT I INTRODUCTION**

**9 Hours**

An overview – Object basics – Object state and properties – Behavior – Methods – Messages – Information hiding – Class hierarchy – Relationships – Associations – Aggregations- Identity – Dynamic binding – Persistence – Meta classes – Object oriented system development life cycle.

**UNIT II METHODOLOGY AND UML**

**9 Hours**

Introduction – Survey – Rumbaugh, Booch, Jacobson methods – Patterns – Frameworks– Unified approach – Unified modeling language – Static and Dynamic models – UML diagrams – Class diagram – Use case diagrams – Dynamic modeling – Model organization – Extensibility.

**UNIT III OBJECT ORIENTED ANALYSIS**

**9 Hours**

Identifying Use case – Business object analysis – Use case driven object oriented analysis – Use case model – Documentation – Classification – Identifying object, relationships, attributes, methods – Super-sub class – A part of relationships Identifying attributes and methods – Object responsibility

**UNIT IV OBJECT ORIENTED DESIGN**

**9 Hours**

Design process – Axioms – Corollaries – Designing classes – Class visibility – Refining attributes – Methods and protocols – Object storage and object interoperability –Databases – Object relational systems – Designing interface objects – Macro and Micro level processes – The purpose of a view layer interface

**UNIT V SOFTWARE QUALITY**

**9 Hours**

Quality assurance – Testing strategies – Object orientation testing – Test cases – Test Plan – Debugging principles – Usability – Satisfaction – Usability testing – Satisfaction testing

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR :**

Plant UML

**COURSE OUTCOMES:**

**EMPLOYABILIT**

- On the successful completion of the course, students will be able to
- CO1: Understand the basic concepts to identify state & behavior of real world objects
  - CO2: Learn the various object oriented methodologies and choose the appropriate one for solving the problem with the help of various case studies
  - CO3: Understand the concept of analysis, design & testing to develop a document for the project
  - CO4: Implement analysis, design & testing phases in developing a software project
  - CO5: Understand the testing strategies and know about automated testing tools

**WEB PROGRAMMING**

L	T	P	C
3	0	0	3

**PREREQUISITE:**

1. Problem Solving and C Programming
2. Object Oriented Programming

**COURSE OBJECTIVES:**

1. To understand the concepts and architecture of the World Wide Web.
2. To understand and practice Markup languages
3. To understand and practice embedded dynamic scripting on client side Internet Programming
4. To understand and practice web development techniques on client-side

**UNIT I INTRODUCTION TO WWW**

**9 Hours**

Internet Standards – Introduction to WWW – WWW Architecture – SMTP – POP3 – File Transfer Protocol - Overview of HTTP, HTTP request – response — Generation of dynamic web pages.

**UNIT II DESIGN MARKUP LANGUAGE (HTML):**

**9 Hours**

Introduction to HTML and HTML5 - Formatting and Fonts –Commenting Code – Anchors – Backgrounds – Images – Hyperlinks – Lists – Tables – Frames - HTML Forms. Cascading Style Sheet (CSS): The need for CSS, Introduction to CSS – Basic syntax and structure -Inline Styles – Embedding Style Sheets - Linking External Style Sheets – Backgrounds – Manipulating text - Margins and Padding - Positioning using CSS.

**UNIT III INTRODUCTION TO JAVASCRIPT**

**9 Hours**

Introduction - Core features - Data types and Variables - Operators, Expressions, and Statements -Functions - Objects - Array, Date and Math related Objects - Document Object Model - Event Handling - Controlling Windows & Frames and Documents - Form handling and validations.

**UNIT IV ADVANCED JAVASCRIPT**

**9 Hours**

Browser Management and Media Management – Classes – Constructors – Object-Oriented Techniques in JavaScript – Object constructor and Prototyping - Sub classes and Super classes –JSON - jQuery and AJAX.

**UNIT V PHP**

**9 Hours**

Introduction - Setting up the environment (LAMP server) - Programming basics -Print/echo - Variables and constants – Strings and Arrays – Operators, Control structures and looping structures – Functions – Establishing connectivity with MySQL database.

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR :**

1. Angular JS
2. Node JS

**EMPLOYABILITY**

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Acquire knowledge about functionalities of world wide web
- CO2: Explore markup languages features and create interactive web pages using them
- CO3: Learn and design Client side validation using scripting languages
- CO4: Acquire knowledge about Open source JavaScript libraries
- CO5: Able to design front end web page and connect to the back end databases.

1703CA001

**SERVICE ORIENTED ARCHITECTURE**

L	T	P	C
3	0	0	3

**PREREQUISITE:**

1. Computer Communication and Networks
2. Cryptography and Network Security

**COURSE OBJECTIVES:**

1. To learn SOA fundamentals
2. To understand SOAD Design
3. To gain knowledge about SOAP, UDDI and XML to create web services.
4. To study about service composition and to explore Restful services and SOA security
5. To know about the Cloud Computing architecture and services.

**UNIT I SOA BASICS**

**9 Hours**

Roots of SOA – Characteristics of SOA - Comparing SOA to client server and distributed internet architectures – Anatomy of SOA - How components in an SOA interrelate -Principles of service Orientation – Service Layers.

**UNIT II XML AND WEB SERVICES**

**9 Hours**

XML structure – Elements – Creating Well-formed XML - Name Spaces – Schema Elements, Types, Attributes – XSL Transformations – Parser – Web Services Overview – Architecture.

**UNIT III WSDL, SOAP and UDDI**

**9 Hours**

WSDL - Overview Of SOAP – HTTP – XML-RPC – SOAP: Protocol – Message Structure – Intermediaries – Actors – Design Patterns And Faults – SOAP With Attachments – UDDI.

**UNIT IV SOA IN J2EE AND .NET**

**9 Hours**

SOA platform basics – SOA support in J2EE – Java API for XML-based web services (JAX-WS) - Java architecture for XML binding (JAXB) – Java API for XML Registries (JAXR) - Java API for XML based RPC (JAX-RPC) – JAX-RS SOA support in .NET – ASP.NET web services

**UNIT V CLOUD COMPUTING**

**9 Hours**

Vision of Cloud computing – Cloud Definition – Characteristics and Benefits – Virtualization – Cloud computing Architecture – Cloud Reference Model, Types of Clouds – Cloud Platforms in Industry

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR :**

SOAML Diagrams and tools

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Known about the basic principles of service oriented architecture , its components and techniques
- CO2: Understand the architecture of web service
- CO3: Design and develop web services using protocol
- CO4: Understand technology underlying the service design
- CO5: Acquire the fundamental knowledge of cloud computing

**WEB PROGRAMMING LABORATORY**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>0</b>	<b>0</b>	<b>4</b>	<b>2</b>

**PREREQUISITE :**

Problem Solving and Programming

**COURSE OBJECTIVES:**

1. To learn web page creation.
2. To understand CSS concepts
3. To understand and practice markup languages
4. To understand and practice embedded dynamic scripting on client side Internet Programming

**LIST OF EXPERIMENTS:**

1. Create a web page with the following using HTML5
  - (i) To embed an image map in a web page
  - (ii) To fix the hot spots
  - (iii) Show all the related information when the hot spots are clicked
2. Create a web page with all types of Cascading style sheets.
3. Creation of web pages having dynamic contents and validation using Java script
4. Write a JavaScript for Loan Calculation.
5. Develop PHP program using Arrays, control structures, looping structures and Form Handling
6. Using PHP and MySQL, develop a program to accept book information viz. Accession number, title, authors, edition and publisher from a web page and store the information in a database and to search for a book with the title specified by the user and to display the search results with proper headings.
7. Develop and demonstrate a HTML file that includes JavaScript that uses functions for the following problems:
  - (a) Parameter: A string  
Output: The position in the string of the left-most vowel
  - (b) Parameter: A number  
Output: The number with its digits in the reverse order
8. Designing Quiz Application Personal Information System/ Using JavaScript

**TOTAL: 60 HOURS**

**ADDITIONAL EXPERIMENTS / INNOVATIVE EXPERIMENTS :**

1. Application involving applet based GUI, JDBC, Servlet, JSP/PHP, cookies and session tracking.
2. Develop PHP program using Arrays, control structures, looping structures and Form Handling

**COURSE OUTCOMES :**

On the successful completion of the course, students will be able to

- CO1: Make Web site creation and validation.
- CO2: Explore markup languages features and create interactive web pages using them
- CO3: Acquire knowledge about Open source JavaScript libraries
- CO4: Learn and design Client side validation using scripting languages

**CASE TOOLS LABORATORY**

L	T	P	C
0	0	4	2

**PREREQUISITE :**

Software Engineering

**COURSE OBJECTIVES:**

1. To understand the software engineering methodologies for project development.
2. To gain knowledge about open source tools for Computer Aided Software Engineering.
3. To develop an efficient software using case tools

**LIST OF EXPERIMENTS:**

1. Practicing the different types of case tools such as Rational Rose / other Open Source be used for all the phases of Software development life cycle.
2. Data modeling
3. Source code generators
4. Apply the following to typical application problems:
  - (a) Project Planning
  - (b) Software Requirement Analysis
  - (c) Software Design
  - (d) Data Modeling & Implementation
  - (e) Software Estimation
  - (f) Software TestingA possible set of applications may be the following:
  - (a) Library System
  - (b) Student Marks Analyzing System
  - (c) Text Editor.
  - (d) Create a dictionary.
  - (e) Telephone directory.
  - (f) Inventory System.

EMPLOYABILIT

**TOTAL : 60 HOURS**

**ADDITIONAL EXPERIMENTS / INNOVATIVE EXPERIMENTS :**

1. To develop the application by use of different types of case tools such as Rational Rose/other source
2. To develop the School Management System application by use of different types of case tools such as Rational Rose/other source

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to  
CO1: Use open source CASE tools to develop software.  
CO2: Analyze and design software requirements in an efficient manner.

TECHNICAL SEMINAR AND REPORT WRITING

L	T	P	C
0	0	2	1

**COURSE OBJECTIVES:**

1. To help students develop listening skills for academic and professional purposes.
2. To help students acquire the ability to speak effectively in English in real-life situations
3. To inculcate reading habit and to develop effective reading skills.
4. To learn and use client server architecture based applications.
5. To explore server side functionalities of an application.

The goal of this course is to train the students to critically evaluate a well-defined set of research subjects and to summarize the findings concisely in a paper of scientific quality. The paper will be evaluated based on the ability to understand a topic, communicate it and identify the issues. Results from this term paper will be presented to fellow students and a committee of faculty members:

1. Every student selects a topic related to current trends and the same should be approved by the respective committee. This selection should have at least 5 distinct primary sources.
2. Every student must write a short review of the topic and present it to fellow students and faculty (discuss the topic – expose the flaws – analyze the issues) every week.

The faculty should evaluate the short review and award marks with respect to the following.

1. Has the student analyzed – not merely quoted – the most significant portions of the primary sources employed?
2. Has the student offered original and convincing insights?
3. Plagiarism to be checked.
4. Every student should re-submit and present the review article including issues/ comments/conclusions which had arisen during the previous discussion.
5. Every student should submit a final paper as per project specifications along with all short review reports (at least 4 internal reviews) and corresponding evaluation comments.
6. Every student should appear for a final external review exam to defend themselves.

**COURSE OUTCOMES:**

*Employability*

TOTAL : 30 HOURS

On the successful completion of the course, students will be able to

- CO1: Gain confidence in facing the placement interview.
- CO2: Develop effective communication skills (spoken and written).
- CO3: Interact with each other and face a wide variety of issues, topics, and situations that they are likely to come across as entry level professionals

**LIFE SKILL III - APTITUDE – I**

L	T	P	C
0	0	2	1

**COURSE OBJECTIVES:**

1. To brush up problem solving skill and to improve intellectual skill of the students
2. To be able to critically evaluate various real life situations by resorting to Analysis Of key issues and factors
3. To be able to demonstrate various principles involved in solving mathematical problems and thereby reducing the time taken for performing job functions.
4. To enhance analytical ability of students
5. To augment logical and critical thinking of Student

**UNIT I INTRODUCTION TO NUMBER SYSTEM, BASIC SHORTCUTS OF ADDITION, MULTIPLICATION, DIVISION 6 Hours**

Classification of numbers – Types of Numbers - Divisibility rules - Finding the units digit - Finding remainders in divisions involving higher powers - LCM and HCF Models - Fractions and Digits – Square, Square roots – Cube, Cube roots – Shortcuts of addition, multiplication, Division

**UNIT II RATIO AND PROPORTION, AVERAGES 6 Hours**

Definition of Ratio - Properties of Ratios - Comparison of Ratios - Problems on Ratios - Compound Ratio - Problems on Proportion, Mean proportional and Continued Proportion Definition of Average - Rules of Average - Problems on Average - Problems on Weighted Average - Finding average using assumed mean method

**UNIT III PERCENTAGES, PROFIT AND LOSS 6 Hours**

Introduction Percentage - Converting a percentage into decimals - Converting a Decimal into a percentage - Percentage equivalent of fractions - Problems on percentages - Problems on Profit and Loss percentage- Relation between Cost Price and Selling price - Discount and Marked Price - Two different articles sold at same Cost Price - Two different articles sold at same Selling Price - Gain% / Loss% on Selling Price.

**UNIT IV CODING AND DECODING, DIRECTION SENSE 6 Hours**

Coding using same set of letters - Coding using different set of letters - Coding into a number - Problems on R-model - Solving problems by drawing the paths - Finding the net distance travelled - Finding the direction - Problems on clocks - Problems on shadows - Problems on direction sense using symbols and notations.

**UNIT V NUMBER AND LETTER SERIES NUMBER AND LETTER ANALOGIES, ODD MAN OUT 6 Hours**

Difference series - Product series - Squares series - Cubes series - Alternate series - Combination series - Miscellaneous series - Place values of letters - Definition of Analogy - Problems on number analogy - Problems on letter analogy - Problems on verbal analogy - Problems on number Odd man out - Problems on letter Odd man out - Problems on verbal Odd man out

**SKILL DEVELOPMENT**

**TOTAL: 30 HOURS**

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Learners should be able to understand number and solving problems least time using various shortcut
  - CO2: Solve problems on averages; compare two quantities using ratio and proportion.
  - CO3: Calculate concept of percentages, implement business transactions using profit and loss.
  - CO4: Workout concepts of Coding and Decoding, ability to visualize directions and understand the logic behind a sequence.
  - CO5: Learners should be able to find a series the logic behind a sequence.

**CRYPTOGRAPHY AND NETWORK SECURITY**

L	T	P	C
3	0	0	3

**PREREQUISITE :**

1. Computer Networks

**COURSE OBJECTIVES:**

1. To understand the fundamentals of Cryptography.
2. To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
3. To understand the various key distribution and management schemes.
4. To understand how to deploy encryption techniques to secure data in transit across data networks.
5. To design security applications in the field of Information technology.

**UNIT I INTRODUCTION 9 Hours**

An Overview of Computer Security - Security Services - Security Mechanisms - Security Attacks - Access Control Matrix, Policy - Security policies, Confidentiality policies, Integrity policies and Hybrid policies.

**UNIT II CRYPTOSYSTEMS & AUTHENTICATION 10 Hours**

Classical Cryptography - Substitution Ciphers - permutation Ciphers - Block Ciphers -DES - Modes of Operation - Linear Cryptanalysis, Differential Cryptanalysis - Hash Function - SHA 512 - Message Authentication Codes - HMAC.

**UNIT III PUBLIC KEY CRYPTOSYSTEMS 10 Hours**

Introduction to Public Key Cryptography - Number theory - The RSA Cryptosystem and Factoring Integer - Attacks on RSA - The ElGamal Cryptosystem - Digital Signature Algorithm - Key management - Session and Interchange keys, Key exchange and generation - PKI.

**UNIT IV SYSTEM IMPLEMENTATION 8 Hours**

Design Principles, Representing Identity, Access Control Mechanisms. Secure Software Development: Secured Coding - OWASP/SANS Top Vulnerabilities - Buffer Overflows - Incomplete mediation - XSS - Anti Cross Site Scripting Libraries - Canonical Data Format - Command Injection - Redirection - Inference - Application Controls.

**UNIT V NETWORK SECURITY 8 Hours**

Secret Sharing Schemes-Kerberos- Pretty Good Privacy (PGP)-Secure Socket Layer (SSL)-Intruders - HIDS- NIDS - Firewalls - Viruses.

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:**

AES - Finite Fields - Elliptic Curves Cryptography- Authentication Protocols

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Explain the fundamentals of networks security, security architecture and security policies. (K2)
  - CO2: Apply different symmetric cryptographic algorithms in network communication. (K3)
  - CO3: Apply RSA and Digital Signature and public key cryptographic algorithms in network communication. (K3)
  - CO4: Apply different key management techniques in network communication.(K3)
  - CO5: Discuss the design principles of system implementation and application controls. (K2)
  - CO6: Explain the various network security practices and counter measures for system level security. (K2)

**MOBILE COMPUTING**

L	T	P	C
3	0	0	3

**PREREQUISITE :**

1. Computer Networks

**COURSE OBJECTIVES:**

1. To understand the basics of wireless voice and data communication technologies.
2. To learn the basic concepts, aware of the GSM, Routing and GPRS Architecture.
3. To study the working principles of wireless LAN and its standards
4. To build knowledge on various Mobile Computing algorithms
5. To Know the Network, Transport Functionalities of Mobile communication
6. To understand the concepts of Adhoc and wireless sensor networks.

**UNIT I WIRELESS COMMUNICATION FUNDAMENTALS 9 Hours**

Introduction – Wireless transmission – Frequencies for radio transmission – Signals –Antennas – Signal Propagation – Multiplexing – Modulations – Spread spectrum – MAC– SDMA – FDMA – TDMA – CDMA – Cellular Wireless Networks.

**UNIT II TELECOMMUNICATION SYSTEMS 9 Hours**

GSM – System Architecture – Protocols – Routing – Handover – Security – GPRS–System Architecture – Protocols

**UNIT III MOBILE WIRELESS NETWORK 8 Hours**

Wireless LAN – IEEE 802.11– System Architecture–Protocol Architecture –Blue Tooth – Architecture

**UNIT IV MOBILE NETWORK LAYER,TRANSPORT LAYER 9 Hours**

Mobile IP– DSDV – DSR – AODV – ZRP – ODMR–Traditional TCP – Indirect TCP – Snooping TCP – Mobile TCP – Fast transmit/ Fast Recovery – Transmission/ Timeout Freezing – Selective Retransmission – Transaction Oriented TCP.

**UNIT V MOBILE APPLICATION DEVELOPMENT USING ANDROID 10 Hours**

Introduction – Android architecture –Application Components – Android layouts – Android Controls – Android Event Handling – Android Styles and themes–Android Custom components – Android Advanced Concepts.

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:**

- 1.Mobile Adhoc Networks(MANET)

**COURSE OUTCOMES:**

- Empolyability
- On the successful completion of the course, students will be able to
- CO1: Describe the fundamentals of Wireless Communication. (K2)
  - CO2: Explain the architectures and protocols of Telecommunication Systems. (K2)
  - CO3: Explain the architectures and protocols of Wireless LAN. (K2)
  - CO4: Categorize the various algorithms in Mobile Network Layer and Transport Layer.(K2)
  - CO5: Develop an application using Application Components, Fonts and Colors in Android (K3)
  - CO6: Develop an application using Layout Managers and Event Listeners in Android.(K3)

**INTERNET OF THINGS**

L	T	P	C
3	0	0	3

**PREREQUISITE :**

1. Computer Organization and Design
2. Computer Communications and Networks

**COURSE OBJECTIVES:**

1. To understand the fundamentals of Internet of Things.
2. To build a small low cost IoT application using Raspberry Pi and Arduino.
3. To apply the concept of Internet of Things in the real world scenario.

**UNIT I FUNDAMENTALS OF IoT** **9 Hours**  
Internet of Things – Physical Design – Logical Design – IoT Enabling Technologies – IoT Levels & Deployment Templates – Domain Specific IoTs – IoT and M2M – IoT System Management with NETCONF – YANG – IoT Platforms Design Methodology.

**UNIT II IoT ARCHITECTURE** **8 Hours**  
M2M high-level ETSI architecture – IETF architecture for IoT – OGC architecture – IoT reference model – Domain model – Information model – functional model – communication model – IoT reference architecture.

**UNIT III IoT PROTOCOLS** **8 Hours**  
Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus – Zigbee Architecture – Network layer – 6LowPAN – CoAP – Security.

**UNIT IV BUILDING IoT WITH RASPBERRY PI AND ARDUINO** **11 Hours**  
Building IOT with Rasperry Pi – IoT Systems – Logical Design using Python – IoT Physical Devices & Endpoints – IoT Device – Building blocks – Raspberry Pi – Board – Linux on Raspberry Pi – Raspberry Pi Interfaces – Programming Raspberry Pi with Python – Other IoT Platforms – Arduino Basics – Arduino Software IDE – Arduino Boards – Arduino Programming Language – Developing IoT Applications using Arduino.

**UNIT V CASE STUDIES AND ADVANCED TOPICS** **9 Hours**  
Real world design constraints – Applications – Asset management, Industrial automation, Smart grid, Commercial building automation, Smart cities – Participatory sensing – Data Analytics for IoT – Software & Management Tools for IoT – Cloud Storage Models & Communication APIs – Cloud for IoT – Amazon Web Services for IoT.

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:**

Webinars, Security in IOT

**COURSE OUTCOMES:**

- Employability*
- On the successful completion of the course, students will be able to
- CO1: Explain the fundamentals of IoT. (K2)
  - CO2: Describe the Architecture of IoT. (K2)
  - CO3: Categorize the Protocols of IoT. (K2)
  - CO4: Develop IoT applications using Raspberry Pi. (K3)
  - CO5: Develop IoT applications using Arduino. (K3)
  - CO6: Make use of Cloud to deploy real time IoT Applications. (K3)

1703CA016

**BIG DATA ANALYTICS**

L	T	P	C
3	0	0	3

**PREREQUISITE :**

1. Database Management Systems

**COURSE OBJECTIVES:**

1. To explore the fundamental concepts of big data analytics.
2. Learn to analyze the big data using intelligent techniques.
3. To learn to use various techniques for mining data stream.
4. To understand the applications of Hadoop and Map Reduce Concepts.
5. To gain knowledge on Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data analytics.

**UNIT I INTRODUCTION TO BIG DATA 9 Hours**

Introduction to Big Data Platform Characteristic Features –Big Data Applications -Big Data vs Traditional Data– Challenges of Conventional Systems -Intelligent data analysis – Nature of Data - Analytic Processes and Tools - Analysis vs Reporting - Modern Data Analytic Tools - Statistical Concepts: Sampling Distributions - Re-Sampling - Statistical Inference - Prediction Error.

**UNIT II MINING DATA STREAMS 9 Hours**

Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform(RTAP) – Applications- Case Studies - Real Time Sentiment Analysis, Stock Market Predictions.

**UNIT III HADOOP FRAMEWORK 9 Hours**

History of Hadoop- The Hadoop Distributed File System – Components of Hadoop- Analyzing the Data with Hadoop- Scaling Out- Hadoop Streaming- Design of HDFS-Java interfaces to HDFS-Basics-Setting up a Hadoop Cluster - Cluster specification - Cluster Setup and Installation - Hadoop Configuration- Security in Hadoop - Administering Hadoop – HDFS - Monitoring-Maintenance-Hadoop benchmarks-Hadoop in the cloud

**UNIT IV MAPREDUCE FRAMEWORK 9 Hours**

Developing a Map Reduce Application-How Map Reduce Works-Anatomy of a Map Reduce Job run-Failures-Job Scheduling-Shuffle and Sort – Task execution - Map Reduce Types and Formats- Map Reduce Features-YARN- Architecture

**UNIT V BIG DATA FRAMEWORKS 9 Hours**

Introduction to NoSQL –Aggregate Data Models –Hbase: Data Model and Implementations –Hbase Clients – Examples –.Cassandra: Data Model –Examples –Cassandra Clients –Hadoop Integration. Pig – Grunt –Pig Data Model –Pig Latin –developing and testing Pig Latin scripts. Hive –Data Types and File Formats –HiveQL Data Definition –HiveQL Data Manipulation –HiveQL Queries.

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:**

Logical data warehouses and federation technology, like data lake, Apis

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Describe the fundamentals of big data. (K2)
  - CO2: Apply various statistical techniques used in big data analytics.(K3)
  - CO3: Explain the basics of Data stream Mining.(K2)
  - CO4: Demonstrate the process of installation, configuration and execution of Hadoop.(K2)
  - CO5: Explore the Map Reduce techniques in Big Data applications.(K2)
  - CO6: Develop Big data applications using Big data frameworks. (K3)

**ADVANCED JAVA PROGRAMMING  
LABORATORY**

L	T	P	C
0	0	4	2

**COURSE OBJECTIVES:**

1. To learn Java and Enterprise Java intensively.
2. To understand many advanced technologies of Java such as Multithreading, Streaming, Networking, Generic collections, RMI.
3. To understand and apply the fundamentals core java, packages, database connectivity for computing.
4. To enhance the knowledge to server side programming.

**LIST OF EXPERIMENTS:**

1. Writing Java programs by making use of class, interface, package, etc for the following different types of inheritance study
  - I. Uses of 'this' keyword
  - II. Polymorphism
2. Writing Java programs by making use of class, interface, package, etc for the following different types of inheritance study.
  - I. Creation of user specific packages
  - II. Creation of jar files and using them
3. Writing Java programs by making use of class, interface, package, etc for the following different types of inheritance study.
  - I. User specific exception handling.
4. Writing window based GUI applications using frames and applets such as Calculator application, Fahrenheit to Centigrade conversion etc.,
5. Application of threads examples.
6. Reading and writing text files.
7. Writing an RMI application to access a remote method.
8. Create a Personal Information System using Swing.
9. Create student information system using JDBC and servlet.
10. FTP Using Sockets.

**TOTAL: 60 HOURS**

**ADDITIONAL EXPERIMENTS / INNOVATIVE EXPERIMENTS :**

1. Writing a Servlet program with database connectivity for a web based application such as students result status checking, PNR number enquiry etc.
2. Creation and usage of Java bean.

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Design Java applications using classes, objects, interfaces, packages and Multithreading. (K3)
  - CO2: Develop programs for reading and writing text files using Java Streams.(K3)
  - CO3: Develop file transfer applications using sockets.(K3)
  - CO4: Design student information system using Servlet and JDBC. (K3)
  - CO5: Design and Develop Calculator application, Fahrenheit to Centigrade conversion using frames and applets (K3)
  - CO6: Develop programs using Event Handling in Swing(K3)
  - CO7: Develop Java RMI application to access remote methods(K3)
  - CO8: Create Mini Projects using Java. (K6)

**MOBILE APPLICATION DEVELOPMENT  
LABORATORY**

L	T	P	C
0	0	4	2

**COURSE OBJECTIVES:**

1. To know about various platforms and tools available for developing mobile applications.
2. To realize the differences between the development of conventional applications and mobile applications.
3. To learn programming skills in J2ME and Android SDK.
4. To study about micro browser based applications to access the Internet using Sun Java Toolkit.

**LIST OF EXPERIMENTS:**

1. Survey of Mobile Application Development Tools.
2. Form design for mobile applications using layout manager.
3. Develop mobile Applications using GUI controls.
4. Graphical and Multimedia applications.
5. Data retrieval applications.
6. Networking applications.
7. Develop a native application that uses GPS location information.
8. Gaming applications. (Perform the experiments from 2 to 7 in J2ME and Android SDK framework)
9. Micro browser based applications using WAP, WML and WML scripts. (Perform experiments in 8 using Sun Java Wireless toolkit)

**TOTAL: 60 HOURS**

**ADDITIONAL EXPERIMENTS / INNOVATIVE EXPERIMENTS :**

1. Create a mobile Application Development Tools
2. Develop the gaming Applications by use of Forms, Controls, Graphical and multimedia, Data retrieval Applications.

**COURSE OUTCOMES:**

- Employability
- On the successful completion of the course, students will be able to
- CO1: Develop simple Mobile Application using eclipse .(K3)
  - CO2: Design and implement Mobile Applications using layout manager in Android. (K3)
  - CO3: Build graphical and Multimedia application using eclipse. (K3)
  - CO4: Design data retrieval application using android SDK. (K3)
  - CO5: Develop Mobile Application for hand held device. (K3)
  - CO6: Develop Game and GPS application using J2ME. (K3)

1704CA406

**SOFT SKILLS DEVELOPMENT LABORATORY**

L	T	P	C
0	0	2	1

**COURSE OBJECTIVES:**

1. To provide opportunities to learners to practice their communicative skills to make them become proficient users of English.
2. To enable learners to fine-tune their linguistic skills (LSRW) with the help of technology to communicate globally.
3. To enhance the performance of learners at placement interviews and group discussions and other recruitment procedures.

**LIST OF EXPERIMENTS:**

**1. PC based session (Weightage 40%)**

**A. English Language Lab:**

**(15 Hours)**

1. **Listening Comprehension: (5)** Listening and typing – Listening and sequencing of sentences – Filling in the blanks - Listening and answering questions.
2. **Reading Comprehension: (5)** Filling in the blanks - Cloze exercises – Vocabulary building - Reading and answering questions.
3. **Speaking: (5)** Phonetics: Intonation – Ear training - Correct Pronunciation – Sound recognition exercises – Common Errors in English. Conversations: Face to Face Conversation – Telephone conversation– Role play activities

**2. B. Audio-visual materials based session (Samples to learn and practice)**

**(06 Hours)**

1. **Resume / Report Preparation / Letter Writing (1)** Structuring the resume / report - Letter writing / Email Communication - Samples.
2. **Presentation skills: (1)** Elements of effective presentation – Structure of presentation - Presentation tools – Voice Modulation – Audience analysis - Body language – Video samples
3. **Soft Skills: (2)** Time management – Articulateness – Assertiveness – Psychometrics – Innovation and Creativity - Stress Management & Poise - Video Samples
4. **Group Discussion: (1)** Why is GD part of selection process? - Structure of GD – Moderator – led and other GDs Strategies in GD – Team work - Body Language - Mock GD – Video samples
5. **Interview Skills: (1)** Kinds of interviews – Required Key Skills – Corporate culture – Mock interviews- Video samples.

**3. Practice Session (Weightage – 60%)**

**1. RESUME / REPORT PREPARATION / LETTER WRITING:**

**(06 Hours)**

**2. SOFTSKILLS**

**(08 Hours)**

Hard skills & soft skills – soft skills: self-management skills & people skills - training in soft skills persuasive skills – sociability skills – interpersonal skills – team building skills – leadership skills – problem solving skills – adaptability - stress management – motivation techniques – life skills

**3. GROUPDISCUSSIONSKILLS**

**(05 Hours)**

Participating in group discussions – understanding group dynamics - brainstorming the topic – questioning and clarifying –GD strategies (expressing opinions, accepting or refusing others' opinions, turn taking) – activities to improve GD skills – viewing recorded GD - mock GD.

**4. INTERVIEWSKILLS**

**(05 Hours)**

Interview etiquette – dress code – body language – mock interview –attending job interviews – answering questions confidently – technical interview – telephone/Skype interview- practice in different types of questions – one to one interview & panel interview – FAQs related to job interview- Emotional and cultural intelligence

**TOTAL: 45 HOURS**

**ADDITIONAL EXPERIMENTS / INNOVATIVE EXPERIMENTS :**

Word building

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Practice the presentations and participate in group discussions with high level of self-confidence.
  - CO2: Perform well in the interviews.
  - CO3: Practice reading and writing skills needed for workplace situations.

1704CA407

**LIFE SKILL III APTITUDE – II**

L	T	P	C
0	0	2	1

**PREREQUISITE :**

Life Skill III-Aptitude I

**COURSE OBJECTIVES:**

1. To brush up problem solving skill and to improve intellectual skill of the students.
2. To be able to critically evaluate various real life situations by resorting to Analysis Of key issues and factors.
3. To be able to demonstrate various principles involved in solving mathematical problems and thereby reducing the time taken for performing job functions.
4. To enhance analytical ability of students.
5. To augment logical and critical thinking of Student.

**UNIT I PARTNERSHIP, MIXTURES AND ALLEGATIONS, PROBLEM ON AGES, SIMPLE INTEREST, COMPOUND INTEREST 6 Hours**

Introduction Partnership - Relation between capitals, Period of investments and Shares- Problems on mixtures - Allegation rule - Problems on Allegation – Problems on ages - Definitions Simple Interest - Problems on interest and amount - Problems when rate of interest and time period are numerically equal - Definition and formula for amount in compound interest - Difference between simple interest and compound interest for 2 years on the same principle and time period.

**UNIT II BLOOD RELATIONS, , CLOCKS, CALENDARS 6 Hours**

Defining the various relations among the members of a family - Solving Blood Relation puzzles - Solving the problems on Blood Relations using symbols and notations - Finding the angle when the time is given - Finding the time when the angle is known - Relation between Angle, Minutes and Hours - Exceptional cases in clocks - Definition of a Leap Year - Finding the number of Odd days - Framing the year code for centuries - Finding the day of any random calendar date

**UNIT III TIME AND DISTANCE, TIME AND WORK 6 Hours**

Relation between speed, distance and time - Converting kmph into m/s and vice versa - Problems on average speed - Problems on relative speed - Problems on trains - Problems on boats and streams - Problems on circular tracks - Problems on races - Problems on Unitary method - Relation between Men, Days, Hours and Work - Problems on Man-Day-Hours method - Problems on alternate days - Problems on Pipes and Cisterns.

**UNIT IV DATA INTERPRETATION AND DATA SUFFICIENCY 6 Hours**

Problems on tabular form - Problems on Line Graphs - Problems on Bar Graphs - Problems on Pie Charts - Different models in Data Sufficiency - Problems on data redundancy

**UNIT V ANALYTICAL AND CRITICAL REASONING 6 Hours**

Problems on Linear arrangement - Problems on Circular arrangement - Problems on Double line-up - Problems on Selections - Problems on Comparisons - Finding the Implications for compound statements - Finding the Negations for compound statements- Problems on assumption - Problems on conclusions - Problems on inferences - Problems on strengthening and weakening of arguments

**TOTAL: 30 HOURS**

**COURSE OUTCOMES:**

*Skill Development*

On the successful completion of the course, students will be able to

- CO1: Solve problems on Partnership, Mixture & Allegation and ages least time using shortcuts and apply real life situations.
- CO2: Workout family relationships concepts, ability to visualize clocks & calendar and understand the logic behind a Sequence
- CO3: Calculate concepts of speed, time and distance, understand timely completion using time and work.
- CO4: Learners should be able to understand various charts and interpreted data least time.
- CO5: Workout puzzles, ability to arrange things in an orderly fashion.
- CO6: Solve problems on Partnership, Mixture & Allegation and ages least time using shortcuts and apply real life situations.

**SOFTWARE TESTING**

L	T	P	C
3	0	0	3

**PREREQUISITE :**

1. Software Engineering Methodologies
2. Object Oriented Analysis and Design

**COURSE OBJECTIVES:**

1. To provide an insight into software life cycle and various software process models
2. To estimate the resources for developing the application and to prepare the schedule
3. To know the various designing concepts and notations for modeling the software
4. To prepare the test cases for the project, apply various testing techniques, strategies and metrics to evaluate the software.
5. To construct software with high quality and reliability.

**UNIT I INTRODUCTION TO TESTING AND FUNDAMENTALS 9 Hours**

Introduction: Evolving Profession of Software Engineering – Role of Process in Software Quality – Testing as a process – Testing Maturity Model. Fundamentals: Software Testing Principals – Tester Role in Software Development Organization. Software Development Life Cycle Model: Phases of Software Project – Quality – Quality Assurance – Quality Control – Life Cycle Model.

**UNIT II DEFECTS, HYPOTHESES AND TEST 9 Hours**

Origin of Defects –Defect Classes: Requirement and Specification Defects Classes – Design Defect Classes –Coding Defect Classes – Defect Repository – Testing Defect – Tester Support for Developing a Defect Repository.

**UNIT III SOFTWARE TESTING STRATEGIES AND TECHNIQUES 9 Hours**

Introduction to Testing Design Strategies – Test Case Specification –Test Case Design Techniques – Functional: Equivalence Partitioning – Boundary Value Analysis – Extreme Input Testing – State Transition Testing – Cause Effect Graphing. Test Case Design Techniques - Structural: Statement Testing – Branch/Decision Testing –Dynamic and Static Analysis.

**UNIT IV LEVELS OF TESTING 9 Hours**

Unit Testing – Integration Test : Goals – Integration Strategies for Procedures and functions – Integration Strategies for Classes – Designing Integration Test – Integration Test Planning – System Test: Functional Testing – Performance Testing – Stress Testing – Configuration Testing – Security Testing – Recovery Testing . Regression Test – Alpha beta and Acceptance Test

**UNIT V TESTING GOALS, POLICIES, PLANS AND DOCUMENTATION 9 Hours**

Introduction – Testing, Debugging Goals and Policies – Test Planning – Test Plan Components – Test plan Attachments –Locating Test Items – Reporting test Results – Role of three Critical Groups in Testing, Planning and Test Policy Development.

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:**

1. Software Testing Tools: Selenium
2. Apache Master

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

CO1: Describe the fundamentals of Software Testing.  
CO2: Perform automated testing using test tools.  
CO3: Evaluate the system with various testing techniques and strategies.  
CO4: Explain the various levels of testing.  
CO5: Describe the Concepts of Document testing procedures.

VIRTUALIZATION AND CLOUD COMPUTING

L	T	P	C
2	0	2	3

**PREREQUISITE :**

1. Database management system

**COURSE OBJECTIVES:**

1. To introduce the broad perceptives of cloud architecture and model
2. To understand the concept of Virtualization and design of cloud Services
3. To understand the concept of cloud and utility computing and its various issues
4. To appreciate the emergence of cloud as the next generation computing paradigm
5. To be able to set up a private cloud

**UNIT I VIRTUALIZATION 6 Hours**

Basics of Virtualization - Types of Virtualization - Implementation Levels of Virtualization -Virtualization Structures - Tools and Mechanisms - Virtualization of CPU, Memory, I/O Devices -Virtual Clusters and Resource management – Virtualization for Data-center Automation.

**UNIT II SERVER CONSOLIDATION 6 Hours**

Hardware Virtualization – Virtual Hardware Overview - Sever Virtualization – Physical and Logical Partitioning - Types of Server Virtualization – Business cases for Sever Virtualization – Uses of Virtual server Consolidation – Planning for Development –Selecting server Virtualization Platform.

**UNIT III CLOUD ARCHITECTURE AND MODEL 6 Hours**

Technologies for Network-Based System – System Models for Distributed and Cloud Computing –NIST Cloud Computing Reference Architecture. Cloud Models:- Characteristics – Cloud Services – Cloud models (IAAS, PAAS, SAAS – Lab Experiment using VMWare) – Public vs Private Cloud –Cloud Solutions - Cloud ecosystem – Service management – Computing on demand.

**UNIT IV CLOUD INFRASTRUCTURE 6 Hours**

Architectural Design of Compute and Storage Clouds – Layered Cloud Architecture Development –Design Challenges - Inter Cloud Resource Management – Resource Provisioning and Platform Deployment – Global Exchange of Cloud Resources.

**UNIT V VIRTUALIZATION AND CLOUD SECURITY 6 Hours**

Guest hopping, attacks on the VM (delete the VM, attack on the control of the VM, code or file injection into the virtualized file structure), VM migration attack, hyperjacking-Cloud Security and Trust Management– Cloud Security Challenges – Cloud Security Defense Strategies– Distributed Intrusion/Anomaly Detection – Data and Software Protection Techniques.

**TOTAL: 30+30 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:**

1. Network Virtualization
2. Software Defined Network

**COURSE OUTCOMES:**

- Employability*
- On the successful completion of the course, students will be able to
- CO1: Identify the architecture and delivery models of cloud computing
  - CO2: Apply suitable virtualization concept
  - CO3: Explain the main concepts, key technologies, strengths and limitations of cloud computing
  - CO4: Describe the architecture, infrastructure and delivery models of cloud computing
  - CO5: Explain the core issues of cloud computing such as security, privacy and interoperability

**PYTHON PROGRAMMING**

L	T	P	C
4	0	0	4

**PREREQUISITE :**

1. Object Oriented Programming
2. Advanced Java Programming

**COURSE OBJECTIVES:**

1. To introduce the basics of Python
2. To implement python programs with conditionals and loops
3. Demonstrate the use of Python lists and dictionaries
4. Describe and apply object-oriented programming methodology

**UNIT I INTRODUCTION PYTHON 12 Hours**

Introduction –Python –Interpreter-keywords and identifier-Data types-Variables-operators-Expression-Comments- list-statements-tuple assignment- operators-module-illustrative programs.

**UNIT II CONTROL FLOW AND FUNCTION 12 Hours**

Conditionals- Boolean values and operators- conditional (if)-alternative (if-else),-chained conditional (if-elif-else);-Iteration: state-while-for-break- continue- pass- functions- return values-parameters-local and global scope-function composition- recursion-Strings-string slices- immutability- string functions and methods- string module- Lists as arrays.

**UNIT III LISTS,TUPLES,DICTIONARIES 12 Hours**

Lists: list operations-list slices- list methods-list loop- mutability-aliasing-cloning lists-list parameters-Tuples: tuple assignment- tuple as return valued-Dictionaries-operations and methods-advanced list processing - list comprehension- Illustrative programs-selection sort- insertion sort,-Mergesort-histogram.

**UNIT IV NumPy 12 Hours**

NumPy- NumPy Array-NumPy Side Effects-Subsetting NumPy Arrays-2D NumPy Arrays-2D Arithmetic - Basic Statistics.

**UNIT V FILES,MODULES AND PACKAGES 12 Hours**

Files and exception-text files- reading and writing files-format operator-command line arguments-errors and exceptions-handling modules-packages- Represent compound data using Python lists, tuples, dictionaries - word count- copy file.

**TOTAL: 60 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:**

1. Intermediate Python Resources

**COURSE OUTCOMES:**

- Empellability*
- On the successful completion of the course, students will be able to
- CO1: Describe the basics of python programming
  - CO2: Develop the python programs using Conditional Statements.
  - CO3: Develop the python program using Lists, Tuples, Dictionaries
  - CO4: Develop the real time application using NumPy array concepts,
  - CO5: Develop the python programs using files and packages.

**SOFTWARE TESTING LABORATORY**

L	T	P	C
0	0	4	2

**COURSE OBJECTIVES:**

1. To apply various testing techniques and to detect the errors in the software.
2. To generate and apply the test cases using the automated testing tool.
3. To learn the functionality of automated testing tools to apply in the specialized environment
4. To get insight into the levels of testing in the user environment.

**LIST OF EXPERIMENTS:**

The following experiments should be practiced:

1. Study of software testing tools such as Rational Rose Test Suite, Selenium Tool
2. Implementation of testing techniques using Automation Tools.
3. Mini-project: Developing automated test case generation.

**TOTAL: 60 HOURS**

**ADDITIONAL EXPERIMENTS / INNOVATIVE EXPERIMENTS:**

1. Using Selenium IDE, Write a test suite containing minimum 4 test cases.
2. Write and test a program to update 10 student records into table into Excel file.

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- Empathy ability*
- CO1: Test the software by applying various testing techniques.
  - CO2: Debug the project and to test the entire computer based systems at all levels.
  - CO3: Test the applications in the specialized environment using various automation tools.
  - CO4: Design and develop automated test case generation tools.

**PYTHON PROGRAMMING LABORATORY**

L	T	P	C
0	0	4	2

**COURSE OBJECTIVES:**

1. To write, test, and debug simple Python programs
2. To implement Python programs with conditionals and loops.
3. Use functions for structuring Python programs
4. Represent compound data using Python lists, tuples, dictionaries
5. Read and write data from/to files in Python.

**LIST OF EXPERIMENTS:**

1. Compute the GCD of two numbers
2. Find the square root of a number (Newton's method)
3. Exponentiation (power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Programs that take command line arguments (word count)
11. Find the most frequent words in a text read from a file
  1. Simulate elliptical orbits in Pygame
  2. Simulate bouncing ball using Pygame

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Write, test, and debug simple Python programs
- CO2: Develop the python programs using Conditional Statements.
- CO3: Develop the python programs using sorting.
- CO4: Develop the python program using Lists
- CO5: Develop the python programs using files.

**INTELLIGENT DATA ANALYSIS**

L	T	P	C
3	0	0	3

**PREREQUISITE :**

1. Data Base Management System
2. Data mining Techniques

**COURSE OBJECTIVES:**

1. To understand data mining principles and techniques.
2. To expose the students to the concepts of Big Data.
3. To understand various data analysis tasks.

**UNIT I INTRODUCTION TO BIG DATA 8 Hours**

Introduction to Big Data Platform–Challenges of conventional systems–Web data–Evolution of Analytic scalability –analytic processes and tools –Analysis vs reporting–Modern data analytic tools –Statistical concepts–Sampling distributions–re-sampling –statistical inference–prediction error.

**UNIT II DATA PREPROCESSING & ASSOCIATION RULE MINING 8 Hours**

Need for Data Preprocessing–Data Cleaning–Data Integration and Transformation– Data Reduction –Data Discretization and Concept Hierarchy Generation–Association Rule Mining - Mining Frequent Item sets with and without Candidate Generation–Mining Various Kinds of Association Rules.

**UNIT III DATA ANALYSIS 10 Hours**

Regression modeling - Multivariate analysis - Bayesian modeling - inference and Bayesian networks–Support vector and kernel methods–Analysis of time series–linear systems analysis–nonlinear dynamics–Rule induction–Neural networks–learning and generalization – competitive learning–principal component analysis and neural networks–Fuzzy logic–extracting fuzzy Models from data- fuzzy decision trees – Stochastic search methods.

**UNIT IV CLUSTERING 9 Hours**

Cluster Analysis–Types of Data in Cluster Analysis –A Categorization of Major Clustering Methods–Partitioning Methods–Hierarchical methods– Density-Based Methods– Grid-Based Methods–Model-Based Clustering Methods–Clustering High-Dimensional Data–Constraint.

**UNIT V CLASSIFICATION & PREDICTION 10 Hours**

Classification VS Prediction–Data preparation for Classification and Prediction–Classification by Decision Tree Introduction–Bayesian Classification–Rule Based Classification–Classification by Back propagation–Support Vector Machines–Associative Classification– Other Classification Methods–Prediction–Accuracy and Error Measures–Evaluating the Accuracy of a Classifier or Predictor –Ensemble Methods–Model Section.

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:**

Machine Learning, Deep Learning, R tool.

**COURSE OUTCOMES:**

- Employability
- On the successful completion of the course, students will be able to
- CO1: Explain the fundamental concepts of Big Data Analytics.
  - CO2: Apply Data mining techniques for Big Data Analysis.
  - CO3: Employ Statistical models in Data Analytics.
  - CO4: Perform Clustering of data using clustering methods.
  - CO5: Perform Classification and Prediction of data.

**HUMAN RESOURCES MANAGEMENT**

L	T	P	C
3	0	0	3

**PREREQUISITE :**

1. Software Quality Management
2. Software Project Management

**COURSE OBJECTIVES:**

1. To enable the students to understand the various HR functions in-depth.
2. To familiarize students with contemporary practices.
3. To enable the students to understand the challenges in domestic and IHRM

**UNIT I PERSPECTIVES IN HUMAN RESOURCE MANAGEMENT 8 Hours**

Evolution of human resource management – The importance of the human factor – Challenges – HR functions -Role of human resource manager – Human resource policies – Computer applications in human resource management – Human resource accounting and audit – environment of HRM.

**UNIT II THE CONCEPT OF BEST FIT EMPLOYEE 8 Hours**

Importance of Human Resource Planning – Forecasting human resource requirement –matching supply and demand - Internal and External sources. Recruitment - Selection – induction – Socialization benefits.

**UNIT III TRAINING AND EXECUTIVE DEVELOPMENT 10 Hours**

Types of training methods –purpose- benefits- resistance. Executive Development Programme – Common Practices - Benefits – Self development – Knowledge management.

**UNIT IV SUSTAINING EMPLOYEE INTEREST 9 Hours**

Compensation plan – Reward, remuneration, incentives and benefits – Career management – Development of mentor – Protégé relationships.

**UNIT V PERFORMANCE EVALUATION AND IHRM 10 Hours**

Method of performance evaluation–Feedback–Promotion–Demotion- Transfer and Separation – Implication of job change - The control process – Importance– Methods–grievances–Causes–Implications – Redressal methods.

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:**

1. HRIS, Social networking, e-learning, Recent trends in compensation
2. Changing roles of HR during the transition from Local to Global

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Design policies and methods for all HR sub-functions.
- CO2: Deal with multi-cultural workforce.
- CO3: Forecast human resource requirement.
- CO4: Apply techniques in recruitment, career management and compensation planning.
- CO5: Identify and explain how to best implement a performance management system.

MINI PROJECT USING .NET

L	T	P	C
0	0	4	2

**COURSE OBJECTIVES:**

1. To enable students to understand the Phases involved in Software development.
2. To prepare the students to develop socially relevant projects.
3. To explore the latest tools and technologies in software development.

**LIST OF EXPERIMENTS:**

1. Students are required to develop Mini Project that is socially relevant using latest technologies.
2. Project Phases: Requirement Analysis – System Design – Application Development – Testing.
3. Suggested Applications: Management Systems – Mobile Applications – Web Applications – Gaming Applications – System Software.
4. Assessment Pattern: Review I - Review II - Project Presentation - Report - Viva Voce.
5. User Based Testing and feedback from the benefited society required.

**TOTAL: 60 HOURS**

**COURSE OUTCOMES:**

*Employability*

On the successful completion of the course, students will be able to

- CO1: Apply the fundamentals of software engineering principles.
- CO2: Apply the Software Development Phases involved in Software applications.
- CO3: Develop software applications using latest technologies.
- CO4: Apply the database connectivity concepts.
- CO5: Create Project Report and Presentation

1704CA507	LIFE SKILL V- COMPETITIVE EXAM PREPARATION	L	T	P	C
		0	0	2	1

**PREREQUISITE :**

1. To write, test, and debug simple Python programs
2. To implement Python programs with conditionals and loops.
3. Use functions for structuring Python programs
4. Represent compound data using Python lists, tuples, dictionaries
5. Read and write data from/to files in Python.

**COURSE OBJECTIVES:**

1. To enhance analytical ability of students for interviews and exams.
2. To be able to demonstrate various principles involved in solving mathematical problems and thereby reducing the time taken for performing job functions.
3. To brush up problem solving skill, and to improve intellectual skill of the students
4. To be able to critically evaluate various real life situations by resorting to Analysis of key issues and factors.
5. To enhance analytical ability of students.
6. To augment logical and critical thinking of Student.

**SKILL DEVELOPMENT**

**UNIT I                    Programming in C and C++                    10 Hours**

Programming in C and C++ Programming in C: Elements of C–Tokens, identifiers, data types in C. Control structures in C. Sequence, selection and iteration(s). Structured data types in C–arrays, struct, union, string, and point- C++ Programming: Elements of C++ –Tokens, identifiers. Variables and constants, Data types, Operators, Control statements. Functions parameter passing. Class and objects. Constructors and destructors. Overloading, Inheritance, Templates, Exception handling.

**UNIT II                    Relational Database Design and SQL                    10 Hours**

E-R diagrams and their transformation to relational design-normalization– 1NF, 2NF, 3NF, BCNF and 4NF–Limitations of 4NF and BCNF–SQL : Data Definition Language (DDL) –Data Manipulation Language (DML) –Data Control Language (DCL) commands–Database objects like Views, indexes, sequences, synonyms, data dictionary.

**UNIT III                    Data and File structures                    10 Hours**

Data, Information–Definition of data structure Arrays, stacks, queues, linked lists, trees, graphs, priority queues and heaps– File Structures : Fields, records and files– Sequential, direct, index-sequential and relative files–Hashing, inverted lists and multilists–B trees and B+ trees.

**TOTAL: 30 HOURS**

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Learners should be able to crack both analytical and logical problems in an active manner  
CO2: Able to work challenging and Critical work place  
CO3: Learners know about various competitive exams

2002CA102

**ADVANCED DATA STRUCTURES AND ALGORITHMS**

L	T	P	C
3	0	0	3

**PREREQUISITE :**

Problem Solving And Programming

**COURSE OBJECTIVES:**

1. To understand the linear and non linear data structures available in solving problems
2. To know about the sorting and searching techniques and its efficiencies
3. Using the Graph data structures and algorithms in real time applications
4. To use algorithm design paradigms for algorithm design

**UNIT I LINEAR DATA STRUCTURES**

9 Hours

Introduction – Arrays – Structures- Abstract Data Types (ADT)- Stack- Representing Stacks- Applications of stack – Infix to postfix conversion – evaluation of expression- Queue- Representing Queue- Applications of Queue- Linked Lists –singly Linked list- Doubly Linked lists.

**UNIT II TREE STRUCTURES**

9 Hours

Binary Trees – Operations on Binary trees – Binary Tree Representations – Node representation – Internal and External nodes- Binary tree Traversals - Binary search tree -Huffman Algorithm-

**UNIT III BALANCED SEARCH TREES, SORTING AND INDEXING**

9 Hours

Red-Black trees –B-Trees - Sorting – Bubble sort - Quick Sort - Insertion Sort – Heap sort – Hashing - Hashing functions - Collision Resolution Techniques - Separate chaining - Open addressing - Multiple Hashing.

**UNIT IV GRAPHS**

9 Hours

Definitions – Representation of graph - Graph Traversals - Depth-first traversal – breadth-first traversal - applications of graphs - Topological sort – shortest-path algorithms – minimum spanning tree – Prim's and Kruskal's algorithms – Single Source Shortest Path -Dijkstra's Algorithm -biconnectivity – Euler circuits.

**UNIT V ALGORITHM DESIGN AND ANALYSIS**

9 Hours

Algorithm Analysis – Asymptotic Notations - Divide and Conquer – Merge Sort – Binary Search -Greedy Algorithms – Activity Selection Problem – Dynamic Programming – Matrix Chain Multiplication – Longest Common Subsequence- Backtracking – Sum of Subset Problem-NP Problems -Polynomial Time – Polynomial-time Verification -Vertex Cover Problem-Clique .

**TOTAL: 45 HOURS**

**FURTHER READING:**

Geometric Algorithms

**EMPLOYABILITY**

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: To select and apply the data structure to suit any given problem
  - CO2: Design and Implement Tree data structures and Sets
  - CO3: Implement a variety of algorithms for sorting
  - CO4: To apply the algorithm design techniques to any of the real world problem.
  - CO5: Design algorithms using dynamic programming and Greedy approaches and graph structure to solve real-life problems.
  - CO6: Analyze problems in terms of polynomial time.

**COMPUTER COMMUNICATIONS AND NETWORKS**

**L T P C**  
**3 0 0 3**

Computer Organization and Architecture

**COURSE OBJECTIVES:**

1. To explore various data communication techniques.
2. To know network fundamentals and protocols.
3. To understand network addressing and routing concepts.
4. To understand the requirement of reliable and unreliable communication
5. To understand the functionality and concepts of various application layer protocols

**UNIT I DATA COMMUNICATIONS**

**08 Hours**

Data communications and Networking: Communication model, Data transmission concepts and terminology, Transmission media, Data encoding techniques – Digital data communication techniques: Error detection and correction, Line configurations – Multiplexing: FDM, TDM, Statistical TDM.

**UNIT II NETWORK FUNDAMENTALS**

**08 Hours**

Network Architecture: The OSI model, TCP/IP model – Network interface layer: Framing – Reliable transmission: stop and wait protocol, sliding window protocols.

**UNIT III DATA LINK LAYER**

**10 Hours**

Data link control - Flow Control - Error Detection and Error Correction - MAC – Ethernet, Token ring, Wireless LAN MAC – Blue Tooth – Bridges – Spanning Tree Algorithm.

**UNIT IV NETWORK LAYER**

**09 Hours**

Network layer functions – circuit switching – packet switching – IP datagram – IPv4 – Sub netting and classless addressing – IPv6 – ARP – Routing protocols: distance vector, link state – ICMP – ICMPv6 – Case study on Network Design.

**UNIT V TRANSPORT LAYER AND APPLICATION LAYER**

**10 Hours**

Transport Layer: Duties of transport layer– User Datagram Protocol – Transmission Control Protocol – Congestion – Congestion control. Application Layer: Application layer Protocols – World Wide Web and HTTP – FTP – Domain name system– Telnet –Electronic mail protocols –SNMP – Case study on Software Defined Networks.

**TOTAL: 45 HOURS**

**FURTHER READING :**

Network Simulation 3 Tool

**EMPLOYABILITY**

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Analyze the Communication Model and Data encoding techniques used in Computer Communications
- CO2: Create simple networks by applying networking Protocols
- CO3: Establish Data communication layer in simple networks using Data Link Protocols.
- CO4: Categorize IP addresses using classes of IP and create subnets.
- CO5: Establish Transport layer and application layer in simple networks using protocols.

**ADVANCED DATABASES**

L T P C  
3 0 0 3

**PREREQUISITE:**

1. Basic Data Structures
2. Database management system

**COURSE OBJECTIVES:**

1. To learn the fundamentals of Parallel and Distributed Databases
2. To make a study on Object Oriented Databases
3. To explore the concepts of XML Databases and Mobile Databases
4. To gain knowledge on the intelligent Databases.

**UNIT I PARALLEL AND DISTRIBUTED DATABASES**

**09 Hours**

Database System Architectures: Centralized and Client-Server Architectures – Server System Architectures – Parallel Systems- Distributed Systems – Parallel Databases: I/O Parallelism – Inter and Intra Query Parallelism – Inter and Intra operation Parallelism – Distributed Database Concepts - Distributed Data Storage – Distributed Transactions – Commit Protocols – Concurrency Control – Distributed Query Processing – Three Tier Client Server Architecture- Case Studies.

**UNIT II OBJECT AND OBJECT RELATIONAL DATABASES**

**09 Hours**

Concepts for Object Databases: Object Identity – Object structure – Type Constructors – Encapsulation of Operations – Methods – Persistence – Type and Class Hierarchies – Inheritance – Complex Objects – Object Database Standards, Languages and Design: ODMG Model – ODL – OQL – Object Relational and Extended – Relational Systems : Object Relational features in SQL / Oracle – Case Studies.

**UNIT III XML DATABASES**

**09 Hours**

XML Databases: XML Data Model – DTD - XML Schema - XML Querying – Web Databases – JDBC- Information Retrieval – Data Warehousing – Data Mining.

**UNIT IV MOBILE DATABASES**

**09 Hours**

Mobile Databases: Location and Handoff Management - Effect of Mobility on Data Management - Location Dependent Data Distribution - Mobile Transaction Models - Concurrency Control - Transaction Commit Protocols- Mobile Database Recovery Schemes.

**UNIT V INTELLIGENT DATABASES**

**09 Hours**

Active databases – Deductive Databases – Knowledge bases – Multimedia Databases- Multidimensional Data Structures – Image Databases – Text/Document Databases- Video Databases– Audio Databases – Multimedia Database Design – Spatial Databases.

**TOTAL: 45 HOURS**

**FURTHER READING:**

Data mining and Warehousing, Big Data

**EMPLOYABILITY**

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Develop transaction processing systems with concurrency control.
- CO2: Design Object oriented databases for real time applications.
- CO3: Develop XML databases for web applications.
- CO4: Design Mobile databases for mobile devices.
- CO5: Apply intelligent rules in database development

**PYTHON PROGRAMMING**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**PREREQUISITE :**

1. Objected Oriented Programming
2. Advanced Java Programming

**COURSE OBJECTIVES:**

1. To introduce the basics of Python .
2. To implement python programs with conditionals and loops
3. Demonstrate the use of Python lists and dictionaries
4. Describe and apply object-oriented programming methodology

**UNIT I INTRODUCTION PYTHON**

**9 Hours**

Introduction –Python –Interpreter-keywords and identifier-Data types-Variables-operators-Expression-Comments-list—statements-tuple assignment- operators-module--illustrative programs..

**UNIT II CONTROL FLOW AND FUNCTION**

**9 Hours**

Conditionals- Boolean values and operators- conditional (if)-alternative (if-else),-chained conditional (if-elif-else);- Iteration: state-while-for-break- continue- pass- functions- return values-parameters-local and global scope-function composition- recursion-Strings-string slices- immutability- string functions and methods- string module- Lists as arrays.

**UNIT III LISTS,TUPLES,DICTIONARIES**

**9 Hours**

Lists: list operations-list slices- list methods-list loop- mutability-aliasing-cloning lists-list parameters-Tuples: tuple assignment- tuple as return valued-Dictionaries-operations and methods-advanced list processing - list comprehension- Illustrative programs-selection sort- insertion sort,-Mergesort-histogram.

**UNIT IV NumPy**

**9 Hours**

NumPy- NumPy Array-NumPy Side Effects-Subsetting NumPy Arrays-2D NumPy Arrays-2D Arithmetic - Basic Statistics

**UNIT V FILES,MODULES AND PACKAGES**

**9 Hours**

Files and exception-text files- reading and writing files-format operator-command line arguments-errors and exceptions-handling modules-packages- Represent compound data using Python lists, tuples, dictionaries - word count- copy file.

**TOTAL: 45 HOURS**

**FURTHER READING:**

1. Intermediate Python Resources

**EMPLOYABILIT**

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Describe the basics of python programming
- CO2: Develop the python programs using Conditional Statements.
- CO3: Develop the python program using Lists, Tuples, Dictionaries
- CO4: Develop the real time application using NumPy array concepts,
- CO5: Develop the python programs using files and packages.

**SOFTWARE ENGINEERING AND PROJECT MANAGEMENT**      **L**   **T**   **P**   **C**  
**3**   **0**   **0**   **3**

**COURSE OBJECTIVES:**

1. To provide an insight into the processes of software development.
2. To understand and practice the various fields such as analysis, design, development, testing of Software Engineering.
3. To develop skills to construct software of high quality with high reliability.
4. To apply metrics and testing techniques to evaluate the software.

**UNIT I REQUIREMENT ANALYSIS** **9 Hours**

Introduction: Software Engineering – Product and process – process models - Waterfall Life cycle model –Spiral Model – Prototype Model – fourth Generation Techniques – Agile methods. Requirement Analysis: Software Requirements Analysis and Specification – Software Requirements – Problem Analysis – Requirements Specification – Validation – Metrics – Summary.

**UNIT II SOFTWARE DESIGN AND TESTING** **9 Hours**

Abstraction – Modularity – Software Architecture – Cohesion – Coupling – Various Design Concepts and notations – Real time and Distributed System Design – Coding – Programming Practice – Top-down and Bottom-up - Internal Documentation Verification – Code Reading –Code Inspection or Reviews – Unit Testing – Fundamentals –Functional Testing versus structural Testing Coding – Software Metrics Overview

**UNIT III SOFTWARE PROJECT PLANNING** **9 Hours**

Business Case – Project selection and Approval – Project charter – Project Scope management: Scope definition and Project Scope management – Creating the Work Breakdown Structures – Scope Verification – Scope Control.

**UNIT IV PROJECT SCHEDULING AND PROCUREMENT MANAGEMENT** **9 Hours**

Relationship between people and Effort: Staffing Level – Estimation, Effect of schedule Change on Cost – Degree of Rigor & Task set selector – Project Schedule – Schedule Control – CPM (Numericals) – Basic Planning Purchases and Acquisitions, Planning Contracting – Requesting Seller – Responses – Selecting Sellers – Out Sourcing: The Beginning of the outsourcing phenomenon – Types of outsourcing relationship – The realities of outsourcing – Managing the outsourcing relationship.

**UNIT V OBJECT ORIENTED SOFTWARE ENGINEERING** **9 Hours**

Introduction-Defining Models-Requirement Process-Use Cases-Object Oriented Development Cycle-Overview of the Unified Modeling Language: UML Fundamentals and Notation-Object Oriented Analysis- Design-Implementation.

**TOTAL: 45 HOURS**

**FURTHER READING:**

Case Study for Project Plan and SRS, Design of any Application Project, Testing Techniques, COCOMO model, Web Engineering

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1:Describe the different types of Software requirements and their techniques.
- CO2:Transfer the requirement model into the design model.
- CO3:Develop Project Planning for a given Project.
- CO4:Develop Project Scheduling for a given Project
- CO5:Develop the Object Oriented design and modeling activity in a CASE environment

**ADVANCED DATA STRUCTURES AND ALGORITHMS  
LABORATORY**

L	T	P	C
0	0	4	2

**COURSE OBJECTIVES:**

1. To develop skills in design and implementation of data structures and their applications.
2. To learn and implement linear, non linear and tree data structures.
3. To learn Set ADT and Graph data structures and its applications
4. To study, implement and analyze the different sorting techniques.
1. Create the sales report for M sales person and N products using arrays.
2. Generate Student mark sheets using structures
3. Stack ADT implementation with arrays and linked lists.
4. Queue ADT implementation with arrays and linked lists
5. List ADT implementation with arrays and linked lists.
6. BST implementation.
7. Implementation of Quick sort algorithm.
8. Hashing implementation.
9. Implementation of Shortest path algorithm.
10. Sum of subset problem using backtracking

**TOTAL: 60 HOURS**

**FURTHER READING:**

1. Algorithm Design: Dynamic Programming and Heuristics
2. Algorithm Design: Greedy and Backtrack

**COURSE OUTCOMES:**

**SKILL DEVELOPMENT**

On the successful completion of the course, students will be able to

- CO1: Work with basic data structures that are suitable for the problems to be solved efficiently
- CO2: Design and implement linear, tree, and graph structures and its applications.
- CO3: Design various sorting techniques, its algorithm design and analysis.

**PYTHON PROGRAMMING LABORATORY**

L	T	P	C
(	0	4	2

**COURSE OBJECTIVES:**

1. To write, test, and debug simple Python programs
2. To implement Python programs with conditionals and loops.
3. Use functions for structuring Python programs
4. Represent compound data using Python lists, tuples, dictionaries
5. Read and write data from/to files in Python.

**LIST OF EXPERIMENTS:**

1. Compute the GCD of two numbers
2. Find the square root of a number (Newton,,s method)
3. Exponentiation (power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Programs that take command line arguments (word count)
11. Find the most frequent words in a text read from a file
12. Implementation of linear regression and probability concepts.

**TOTAL : 60 HOURS**

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

CO1: Write, test, and debug simple Python programs

CO2: Develop the python programs using Conditional Statements.

CO3: Develop the python programs using sorting.

CO4: Develop the python program using Lists

CO5: Develop the python programs using files.

CO6: Develop the python program for regression and probability problems.

**2004CA109 LIFE SKILL I : Verbal Ability**

**L T P C**  
**0 0 2 1**

**Course Objectives:**

1. To help students comprehend and use vocabulary words in their day to day communication.
2. To apply appropriate reading strategies for interpreting technical and non-technical documents used in job related settings.
3. To ensure students will be able to use targeted grammatical structures meaningfully and appropriately in oral and written production.
4. To enable the students to arrange the sentences in meaningful unit and to determine whether constructions rely on active or passive voice
5. To Apply the principles of effective business writing to hone communication skills
6. To apply the principles of business etiquettes and Market surveying.

**Unit 1 VOCABULARY USAGE**

**6 hours**

Introduction - Synonyms and Antonyms based on Technical terms – Single word Substitution – Newspaper, Audio and video listening activity.

**Unit 2 COMPREHENSION ABILITY**

**6 hours**

Skimming and Scanning – Social Science passages – Business and Economics passages – latest political and current event based passages – Theme detection – Deriving conclusion from passages

**Unit 3 BASIC GRAMMAR AND ERROR DETECTION**

**6 hours**

Parallelism – Redundancy – Ambiguity – Concord - Common Errors – Spotting Errors – Sentence improvement – Error Detection FAQ in Competitive exams.

**Unit 4 REARRANGEMENT AND GENERAL USAGE**

**6 hours**

Jumble Sentences – Cloze Test - Idioms and Phrases – Active and passive voice – Spelling test.

**Unit 5 APPLICATION OF VERBAL ABILITY**

**6 hours**

Business Writing - Business Vocabulary - Delivering Good / Bad News - Media Communication - Email Etiquette – Report Writing - Proposal writing – Essay writing– Indexing –Market surveying.

**Course Outcomes:**

After the completion of this course, the Students will be able to,

**SKILL DEVELOPMENT**

- |  |    |
|--|----|
| 1. Construct new words in their day to day communication.                                | K2 |
| 2. Predict the information swiftly while reading passages.                               | K2 |
| 3. Elaborate their oral and written communication.                                       | K2 |
| 4. Rephrase the sentences and able to identify the voice of the sentence.                | K2 |
| 5. Summarize their knowledge of the best practices to craft effective business documents | K2 |
| 6. Make use of the etiquettes in business.   | K3 |

2002CA201

**ADVANCED JAVA PROGRAMMING**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**PREREQUISITE :**

1. Programming Concepts using C and C++

**COURSE OBJECTIVES:**

1. To understand and apply the fundamentals core java, packages, database connectivity for computing
2. To enhance the knowledge to server-side programming
3. To provide knowledge on advanced features like Swing , Sockets and MVC architecture.

**UNIT I JAVA FUNDAMENTAL**

**08 Hours**

Java features – Java Platform – Expressions, Operators, and Control Structures – Classes, Methods and Inheritance- Packages and Interfaces – Exception Handling - Garbage Collection – Multithreading

**UNIT II GUI and I/O PROGRAMMING**

**09 Hours**

**AWT package** – Layouts – Event Package – Event Model – Painting- Swing Fundamentals- Swing Classes- Working with Text Fields, Buttons, List and Scroll panes - Input Output Package

**UNIT III JDBC AND WEB APPLICATION DEVELOPMENT**

**12 Hours**

Accessing Database with JDBC – Basics – Manipulating Databases with JDBC – Overview of Servlets – Servlet API – Servlet Life Cycle – **Servlet Configuration** – Running Servlet with Database Connectivity – Session Tracking – **Basics of JSP** – Java Server Faces – Multitier Application Architecture – MVC Architecture of JSF Apps – Common JSF Components – **Session Tracking.**

**UNIT IV DISTRIBUTED APPLICATION AND NETWORKING BASICS**

**07 Hours**

Remote Method Invocation-Java and the Net – Inet Address – TCP/IP Client Sockets – URL –URL Connection – TCP/IP Server Sockets –Datagrams.

**UNIT V ADVANCED FRAMEWORKS**

**09 Hours**

Understanding Struts – MVC framework – Struts Control Flow –Building Model View Controller Component – Hibernate – Architecture – Understanding O/R mapping – Query language – Spring Framework – Architecture – Case Studies.

**TOTAL: 45 HOURS**

**FURTHER READING:**

1. Enterprise Java Beans

**EMPLOYABILIT**

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Develop programs using Java Classes, Interfaces and Exception Handling (K3)
- CO2: Create GUI application using AWT packages and Swing (K6)
- CO3: Create dynamic web applications with database connectivity using server-side technologies(K6)
- CO4: Design and Implement applications using RMI, TCP and UDP sockets(K3)
- CO5: Design and development of applications using advanced frameworks(K3)

2002CA202

**MOBILE TECHNOLOGIES**

L T P C  
3 0 0 3

**PREREQUISITE :**

1. Computer Networks

**COURSE OBJECTIVES:**

1. To understand the basics of wireless voice and data communication technologies.
2. To learn the basic concepts, aware of the GSM, Routing and GPRS Architecture.
3. To study the working principles of wireless LAN and its standards
4. To build knowledge on various Mobile Computing algorithms
5. To Know the Network, Transport Functionalities of Mobile communication
6. To understand the concepts of Adhoc and wireless sensor networks.

**UNIT I WIRELESS COMMUNICATION FUNDAMENTALS 9 Hours**

Introduction – **Wireless transmission** – Frequencies for radio transmission – Signals – Antennas – Signal Propagation – Multiplexing – Modulations – Spread spectrum – MAC– SDMA – FDMA – TDMA – CDMA – Cellular Wireless Networks- Comparison of 2G and 3 G .

**UNIT II TELECOMMUNICATION SYSTEMS 9 Hours**

**GSM** – Mobile services -System Architecture – Protocols – Localization and calling – Handover – Security – GPRS– System Architecture –Protocols- SMS Architecture- Value Added Service through SMS.

**UNIT III MOBILE WIRELESS NETWORK SHORT RANGE NETWORKS 8 Hours**

Introduction-WLAN Equipment-WLAN Topologies-WLAN Technologies-IEEE 802.11 Architecture- Protocol architecture- WAP Architecture- Bluetooth- Bluetooth Protocol- Security in Bluetooth- IrDA- ZigBee.

**UNIT IV MOBILE NETWORK LAYER,TRANSPORT LAYER 9 Hours**

Mobile IP– Mobile IP- **Mobile IP** – Goals – Assumptions and Requirement – Entities – IP packet Delivery –Agent Advertisement and Discovery – Registration – Tunneling and Encapsulation- IPv6 – DHCP – Ad hoc Networks- DSDV – DSR.- Traditional TCP – Indirect TCP – Snooping TCP – Mobile TCP – Fast Retransmit/ Fast Recovery – Transmission/ Timeout Freezing – Selective Retransmission .

**UNIT V PLATFORMS AND RECENT TRENDS 10 Hours**

Mobile Applications Development- **Android Application** Architecture- The Android Application Life Cycle- Creating User Interfaces- Appcelerator Architecture-types mobile os- Geo services- creating mobile applications like game, Clock, calendar, Converter, phone book, Text Editor

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:**

I. Mobile Adhoc Networks(MANET)

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Analyze the terminals signal separation and cell capacity of SDMA, FDMA and CDMA in wireless communication. (K4)
- CO2: Categorize the GSM and GPRS system architecture in Telecommunication system. (K2)
- CO3: Categorize the System architectures and protocols of Wireless LAN. (K2)
- CO4: Analyze the performance of fast transmit and fast recovery for a given Mobile Network.
- CO5: Develop the game application using Android Controls. (K3)
- CO6: Develop the mobile application for location tracking system using GPRS.(K3)

**PREREQUISITE :**

1. Database Management Techniques

**COURSE OBJECTIVES:**

1. To Understand Data mining principles and techniques and Introduce DM as a cutting edge Business intelligence
2. To expose the students to the concepts of Data warehousing Architecture and Implementation.
3. To know the data mining techniques, in details for better organization and retrieval of data
4. To learn to use association rule mining for handling large data
5. To identify Business applications and Trends of Data mining.

**UNIT I DATA MINING & DATA PREPROCESSING 12 Hours**

Introduction to KDD process – Knowledge Discovery from Databases - Need for Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction.

**UNIT II ASSOCIATION RULE MINING 12 Hours**

Introduction - Data Mining Functionalities - Association Rule Mining –Market Basket Analysis – Mining Frequent Itemsets with Candidate Generation –Mining Frequent Itemsets without Candidate Generation Mining Various Kinds of Association Rules

**UNIT III CLASSIFICATION AND PREDICTION 12 Hours**

Classification vs Prediction – Data preparation for Classification and Prediction –Naïve Bayes Classifier– Classification by Decision Tree Introduction –Associative Classification – Support Vector Machines – Prediction: Introduction –Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Model Section

**UNIT IV CLUSTERING AND CLUSTER ANALYSIS IN PYTHON 12 Hours**

Cluster Analysis - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods– Grid-Based Methods –Clustering High- Dimensional Data – Constraint-Based Cluster Analysis – Outlier Analysis.- K means clustering in python-DBSCAN-HAC.

**UNIT V OPEN SOURCE DATA MINING TOOLS 12 Hours**

Introduction –Rapid Miner-Attributes-Modeling-Design and Analysis process-Visualization

**TOTAL: 60 HOURS**

**FURTHER READING:**

1. Bootstrap **EMPLOYABILIT**

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Preprocess the data for mining applications
- CO2: Apply the association rules for mining the data
- CO3: Design and deploy appropriate classification techniques
- CO4: Cluster the high dimensional data for better organization of the data
- CO5: Able to understand the Open Source Mining tools

**Dr. S. RAMABALAN, M.E., Ph.D.,  
PRINCIPAL**

**E.G.S. Pillay Engineering College,  
Thethi, Nagore - 611 002.  
Nagapattinam (Dt) Tamil Nadu.**

**Lab Modules:**

**Module 1**

1. Explore visualization features of the tool for analysis and WEKA.
2. Perform data preprocessing tasks
3. Demonstrate performing association rule mining on data sets.
4. Demonstrate performing classification on data sets.
5. Demonstrate performing clustering on data sets.

**Module 2**

6. Navigate the options available in the WEKA(ex.select attributes panel, preprocess panel, classify panel, cluster panel, associate panel and visualize)
7. Explore the available data sets in WEKA.
8. List attribute names and types of Dataset in SuperMarket.
9. Plot Histogram of Different Datasets in the SuperMarket using WEKA Tool.
10. Load each dataset into Weka and run Apriori algorithm with different support and confidence values. Study the rules generated.

2002CA204

INTERNET OF THINGS

L	T	P	C
2	0	2	3

PREREQUISITE:

1. Computer Organization and Design
2. Computer Communications and Networks

COURSE OBJECTIVES:

1. To understand the fundamentals of Internet of Things.
2. To build a small low cost IoT application using Raspberry Pi and Arduino.
3. To apply the concept of Internet of Things in the real world scenario.

UNIT I FUNDAMENTALS OF IoT

12 Hours

Internet of Things – Physical Design – Logical Design – IoT Enabling Technologies – IoT Levels & Deployment Templates – Domain Specific IoTs – IoT and M2M – IoT System Management with NETCONF – YANG – IoT Platforms Design Methodology.

UNIT II IoT ARCHITECTURE

12 Hours

M2M high-level ETSI architecture – IETF architecture for IoT – OGC architecture – IoT reference model – Domain model – Information model – functional model – communication model – IoT reference architecture.

UNIT III IoT PROTOCOLS

12 Hours

Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus – Zigbee Architecture – Network layer – 6LowPAN – CoAP – Security.

UNIT IV BUILDING IoT WITH RASPBERRY PI AND ARDUINO

12 Hours

Building IOT with Raspberry Pi – IoT Systems – Logical Design using Python – IoT Physical Devices & Endpoints – IoT Device – Building blocks – Raspberry Pi Board – Linux on Raspberry Pi – Raspberry Pi Interfaces – Programming Raspberry Pi with Python – Other IoT Platforms – Arduino Basics – Arduino Software IDE – Arduino Boards – Arduino Programming Language – Developing IoT Applications using Arduino – Case study Applications.

UNIT V CASE STUDIES AND ADVANCED TOPICS

12 Hours

Real world design constraints – Applications – Asset management, Industrial automation, Smart grid, Commercial building automation, Smart cities – Participatory sensing – Data Analytics for IoT – Software & Management Tools for IoT – Cloud Storage Models & Communication APIs – Cloud for IoT – Amazon Web Services for IoT.

TOTAL: 60 HOURS

FURTHER READING:

FOG Computing

EMPLOYABILIT

COURSE OUTCOMES:

On the successful completion of the course, students will be able to

- CO1: Explain the fundamentals of IoT. (K2)
- CO2: Describe the Architecture of IoT.(K2)
- CO3: Categorize the Protocols of IoT.(K2)
- CO4: Develop IoT applications using Raspberry Pi. (K3)
- CO5: Develop IoT applications using Arduino.(K3)
- CO6: Make use of Cloud to deploy real time IoT Applications.(K3)

**PROFESSIONAL PRACTICE AND ETHICS**

**L T P C**  
**3 0 0 3**

**PREREQUISITE :**

Software Quality Assurance

**COURSE OBJECTIVES:**

1. To explore the basic software development ethics.
2. To make understand the essentials of the Project Management.
3. To provide knowledge on the various software architectures.
4. To expose the principles to be followed in OOAD.
5. To understand the ethics of software testing.

**UNIT I INTRODUCTION**

**09 Hours**

What We're Doing-How to Develop Software-A Model That's not a Model At All: Code and Fix-Cruising over the Waterfall-Evolving the Incremental Model-eXtreme Programming (XP)

**UNIT II PROJECT MANAGEMENT ESSENTIALS**

**09 Hours**

Project Planning- Project Organization-Risk Analysis-Resource Requirements-Work Breakdown and Task Estimates-Project Schedule-Project Oversight-Requirements: Types of Requirements-Requirements Digging.

**UNIT III SOFTWARE ARCHITECTURE**

**09 Hours**

General Architectural Patterns-Pipe-and-filter Architecture-An Object-Oriented Architectural Pattern-Design Process-Desirable Design Characteristics-Designers and Creativity

**UNIT IV OBJECT-ORIENTED ANALYSIS AND DESIGN—AN OVERVIEW**

**09 Hours**

An Object-Oriented Analysis and Design Process-Doing the Process-List of Fundamental Object-Oriented Design Principles-The Open-Closed Principle (OCP)- Don't Repeat Yourself Principle (DRY)- The Single Responsibility Principle (SRP).- Liskov Substitution Principle (LSP)- The Dependency Inversion Principle (DIP)- The Interface Segregation Principle (ISP)

**UNIT V DESIGN PATTERNS**

**09 Hours**

Approach to Debugging-Source Code Control-Unit Testing: The Problem with Testing-Characteristics of Tests-Walkthroughs-Code Reviews-Code Inspections

**TOTAL: 45 HOURS**

**FURTHER READING:**

Code of Ethics for Software Development

**EMPLOYABILIT**

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Analyze the architectures of the software development.
- CO2: Develop Project Plan using Project management principles.
- CO3: Compare different software architectural patterns used in software development.
- CO4: Apply object-oriented design principles for developing software applications.
- CO5: Adapt testing principles in software testing.

2002CA206

**JAVA AND WEB PROGRAMMING LABORATORY**

L	T	P	C
0	0	4	2

**Course Objectives:** The student should be able to

1. To understand and apply the fundamentals of core Java
2. To implement inheritance, polymorphism, interfaces, multithreading, streaming, networking and RMI.
3. To develop web applications using client side and server-side programming.
4. To learn and use MVC architecture for application development.

**List of Experiments:**

1. Design and Implement java programs that deals with the following
  - a. Classes and Objects, Interfaces and User defined Packages
  - b. Exception Handling with user defined Exceptions.
  - c. Implementation of Thread Synchronization using any application.
2. Create applet application for Calculator, Fahrenheit to Centigrade conversion.
3. Create a Personal Information System using Swing
4. Reading and writing text files in Java
5. Create student information system using JDBC and servlet
6. Writing an RMI application to access a remote method
7. Reading websites using URL class.
8. FTP Using Sockets.
9. Development of Hibernate framework based application for O/R mapping
10. Web application development using Struts framework & Spring framework

**TOTAL: 60 HOURS**

**ADDITIONAL EXPERIMENTS / INNOVATIVE EXPERIMENTS :**

1. Creation and usage of Enterprise Java bean

**EMPLOYABILIT**

**Course Outcomes:**

After completion of the course, Student will be

1. Design Java applications using classes, objects, interfaces, packages and Multithreading. (K3)
2. Develop programs for reading and writing text files using Java Streams.(K3)
3. Develop file transfer applications using sockets.(K3)
4. Create student information system using Servlet and JDBC. (K6)
5. Create Calculator application, Fahrenheit to Centigrade conversion using applets (K6)
6. Develop programs using Event Handling in Swing(K3)
7. Develop Java RMI application to access remote methods(K3)
8. Create Mini Projects using Java. (K6)

**ATTESTED**

  
**Dr. S. RAMABALAN, M.E., Ph.D.,**

**MOBILE APPLICATION DEVELOPMENT LABORATORY**

L	T	P	C
0	0	4	2

**Course Objectives:**

1. To know about various platforms and tools available for developing mobile applications
2. To create a simple Android Application using Eclipse IDE.
3. To demonstrate the basic application using UI in android
4. To design android application using linear layout

List of Experiments: The following experiments to be practiced

1. Develop an application that uses GUI components. Font and Colours
2. Develop an application that uses Layout Managers and event listeners.
3. Develop a tip calculator application.
4. Graphical and Multimedia applications
5. Developing an android application using Relative layout to display Date and time.
6. Develop an application that makes use of RSS Feed.
7. Develop a native application that uses GPS location information.
8. Implement an application that writes data to the SD card.)
9. Develop an application that makes use of database.
10. Mobile Chatting Application using TCP with mobile client
11. Mobile Chatting Application using UDP with Mobile Client
12. M-Commerce Applications
13. M-service Applications

Total:

60 Hours

**ADDITIONAL EXPERIMENTS / INNOVATIVE EXPERIMENTS :**

1. Create a mobile Application Development Tools
2. Develop the gaming Applications by use of Forms, Controls, Graphical and multimedia, Data retrieval Applications.

**Course Outcomes:**

After completion of the course, Student will be

1. Be able to develop useful mobile applications for the current scenario in mobile computing and pervasive computing

EMPLOYABILIT

2004CA208 LIFE SKILL II - APTITUDE – I

L T P C  
0 0 2 1

Course Objective (s):

- To brush up problem solving skill and to improve intellectual skill of the students
- To be able to critically evaluate various real life situations by resorting to Analysis Of key issues and factors
- To be able to demonstrate various principles involved in solving mathematical problems and thereby reducing the time taken for performing job functions.
- To enhance analytical ability of students
- To augment logical and critical thinking of Student

**Unit 1 Introduction to Number System, Basic Shortcuts of addition, Multiplication, Division** 6 Hours  
Classification of numbers – Types of Numbers - Divisibility rules - Finding the units digit - Finding remainders in divisions involving higher powers - LCM and HCF Models - Fractions and Digits – Square, Square roots – Cube, Cube roots – Shortcuts of addition, multiplication, Division.

**Unit 2 Ratio and proportion, Averages** 6 Hours  
Definition of Ratio - Properties of Ratios - Comparison of Ratios - Problems on Ratios - Compound Ratio - Problems on Proportion, Mean proportional and Continued Proportion Definition of Average - Rules of Average - Problems on Average - Problems on Weighted Average - Finding average using assumed mean method.

**Unit 3 Percentages, Profit And Loss** 6 Hours  
Introduction Percentage – Converting a percentage into decimals - Converting a Decimal into a percentage - Percentage equivalent of fractions - Problems on percentages - Problems on Profit and Loss percentage- Relation between Cost Price and Selling price - Discount and Marked Price - Two different articles sold at same Cost Price - Two different articles sold at same Selling Price - Gain% / Loss% on Selling Price.

**Unit 4 Coding and decoding, Direction sense** 6 Hours  
Coding using same set of letters - Coding using different set of letters - Coding into a number - Problems on R-model - Solving problems by drawing the paths - Finding the net distance travelled - Finding the direction - Problems on clocks - Problems on shadows - Problems on direction sense using symbols and notations.

**Unit 5 Number and letter series Number and Letter Analogies, Odd man out** 6 Hours  
Difference series - Product series - Squares series - Cubes series - Alternate series - Combination series - Miscellaneous series - Place values of letters - Definition of Analogy - Problems on number analogy - Problems on letter analogy - Problems on verbal analogy - Problems on number Odd man out - Problems on letter Odd man out - Problems on verbal Odd man out

Total 30 Hours

SKILL DEVELOPMENT

COURSE OUTCOMES:

On the successful completion of the course, students will be able to

CO1: Learners should be able to understand number and solving problems least time using various shortcut

CO2: Solve problems on averages; compare two quantities using ratio and proportion.

CO3: Calculate concept of percentages, implement business transactions using profit and loss. CO4: Workout concepts of Coding and Decoding, ability to visualize directions and understand the logic behind a sequence.

CO5: Learners should be able to find a series the logic behind a sequence.

2002CA301	<b>CRYPTOGRAPHY AND NETWORK SECURITY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>PREREQUISITE :</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

Data Communications and Network Security

**COURSE OBJECTIVES:**

1. To understand the basics of cryptography
2. To learn to find the vulnerabilities in programs and to overcome them
3. To know the different kinds of security threats in networks and its solution
4. To know the different kinds of security threats in databases and solutions available
5. To learn about the models and standards for security.

**UNIT I                      ELEMENTARY CRYPTOGRAPHY                      12 Hours**

Terminology and Background – Substitution Ciphers – Transpositions – Making Good Encryption Algorithms- Data Encryption Standard- AES Encryption Algorithm – Public Key Encryption –Cryptographic Hash Functions – Key Exchange – Digital Signatures – Certificates

**UNIT II                      PROGRAM SECURITY                      12 Hours**

Secure programs – Non-malicious Program Errors – **Viruses** – Targeted Malicious code – Controls Against Program Threat – Control of Access to General Objects – User Authentication – Good Coding Practices – Open Web Application Security Project Flaws – Common Weakness Enumeration Most Dangerous Software Errors

**UNIT III                      SECURITY IN NETWORKS                      12 Hours**

Threats in networks – Encryption – Virtual Private Networks – PKI – SSH – SSL – IPsec – Content Integrity – Access Controls – Wireless Security – Honeypots – Traffic Flow Security – Firewalls –Intrusion Detection Systems – Secure e-mail.

**UNIT IV                      SECURITY IN DATABASES                      12 Hours**

Security requirements of database systems – Reliability and Integrity in databases –Redundancy –Recovery – Concurrency/ Consistency – Monitors – Sensitive Data – Types of disclosures – Inference-finding and confirming sql injection

**UNIT V                      SECURITY MODELS AND STANDARDS                      12 Hours**

Secure SDLC – Secure Application Testing – Security architecture models – Trusted Computing Base– Bell-LaPadula Confidentiality Model – Biba Integrity Model – Graham-Denning Access Control Model – Harrison-Ruzzo-Ulman Model – Secure Frameworks – COSO – CobiT – Compliances – PCI DSS – Security Standards - ISO 27000 family of standards – NIST.

**TOTAL: 60 HOURS**

**FURTHER READING:**

*Employability* 1. Challenge –Handshake Authentication Protocol (CHAP)

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Apply cryptographic algorithms for encrypting and decryption for secure data transmission
- CO2: Understand the importance of Digital signature for secure e-documents exchange
- CO3: Understand the program threats and apply good programming practice
- CO4: Get the knowledge about the security services available for internet and web applications
- CO5: Gain the knowledge of security models and published standards

2002CA302

**DISTRIBUTED SYSTEMS AND CLOUD COMPUTING**

L	T	P	C
3	0	0	3

**PREREQUISITE:**

1. Computer Networks
2. Operating Systems

**COURSE OBJECTIVES:**

1. To understand the basic concepts of distributed systems
2. To expose the usage of cluster computing and virtualization.
3. To enable development of cloud programs.

**UNIT I DISTRIBUTED SYSTEM MODELS AND ENABLING TECHNOLOGIES 09 Hours**

Introduction – Scalable computing over the Internet – Technologies for Network-Based systems – System Models for Distributed and Cloud Computing – Software Environments for Distributed Systems and Cloud – Performance, Security and Energy Efficiency.

**UNIT II COMPUTER CLUSTERS FOR SCALABLE PARALLEL COMPUTING 09 Hours**

Clustering for Massive Parallelism – Computer clusters and MPP Architectures – Design Principles of Computer Clusters – Cluster Job and Resource Management – Case studies of Top Supercomputer Systems

**UNIT III VIRTUAL MACHINES AND VIRTUALIZATION OF CLUSTERS AND DATA CENTERS 09 Hours**

Virtualization Basics – Implementation levels of Virtualization – Virtualization Structures, Tools and Mechanisms – Virtualization of CPU, Memory and I/O Devices – Virtual Clusters and Resource Management – Virtualization for Data Center Automation.

**UNIT IV COMPUTING CLOUDS, SERVICE ORIENTED ARCHITECTURE AND PROGRAMMING 09 Hours**

Cloud computing and service models - Data-center Design and Interconnection Networks – Architectural Design of Compute and Storage clouds - Public Cloud Platforms: GAE, AWS and Azure – Inter cloud Resource Management – Cloud Security and Trust Management.

**UNIT V CLOUD PROGRAMMING AND SOFTWARE ENVIRONMENTS 09 Hours**

Features of Cloud and Grid Platforms – Parallel and Distributed Programming Paradigms – Programming support of Google App Engine – Programming on Amazon AWS and Microsoft Azure – Emerging Cloud Software Environments – Case Study on Popular cloud Market Applications.

**TOTAL: 45 HOURS**

**FURTHER READING:**

Fog Computing

*Employability*

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Explain the core concepts of distributed systems – K2
  - CO2: Describe Cluster computing and its uses – K2
  - CO3: Discuss system virtualization and its role in cloud computing – K2
  - CO4: Categorize different service models and business applications of cloud – K4
  - CO5: Analyze various cloud programming models and apply them to solve problems on the cloud - K4

**HUMAN RESOURCES MANAGEMENT**

**L T P C**  
**3 0 0 3**

**PREREQUISITE:**

1. Software Quality Management
2. Software Project Management

**COURSE OBJECTIVES:**

1. To enable the students to understand the various HR functions in-depth.
2. To familiarize students with contemporary practices.
3. To enable the students to understand the challenges in domestic and HRM

**UNIT I PERSPECTIVES IN HUMAN RESOURCE MANAGEMENT 08 Hours**

Evolution of human resource management – The importance of the human factor – Challenges – HR functions - Role of human resource manager – Human resource policies – Computer applications in human resource management – Human resource accounting and audit – environment of HRM.

**UNIT II THE CONCEPT OF BEST FIT EMPLOYEE 08 Hours**

Importance of Human Resource Planning – Forecasting human resource requirement –matching supply and demand - Internal and External sources. Recruitment - Selection – induction – Socialization benefits.

**UNIT III TRAINING AND EXECUTIVE DEVELOPMENT 10 Hours**

Types of training methods –purpose- benefits- resistance. Executive Development Programme – Common practices - Benefits – Self development – Knowledge management.

**UNIT IV SUSTAINING EMPLOYEE INTEREST 09 Hours**

Compensation plan – Reward, remuneration, incentives and benefits – Career management – Development of mentor – Protégé relationships.

**UNIT V PERFORMANCE EVALUATION AND IHRM 10 Hours**

Method of performance evaluation–Feedback–Promotion–Demotion- Transfer and Separation – Implication of job change - The control process – Importance– Methods–grievances–Causes–Implications – Redressal methods.

**TOTAL: 45 HOURS**

**FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR :**

1. HRIS, Social networking, e-learning, Recent trends in compensation
2. Changing roles of HR during the transition from Local to Global

*Employability*

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Explain the importance of human resource and their effective management in organization.
  - CO2: Describe the procedures and practices using recruitment and selection
  - CO3: Summarize how to implement the successful training program using types of training methods.
  - CO4: Classify the employee benefit packages with compensation plans.
  - CO5: Associate the activities involved in Performance Appraisal by discussing challenges and implications in grievance redressal methods.

**DATA ANALYTICS**

**L T P C**  
**3 0 0 3**

**PREREQUISITE :**

Data Mining

**COURSE OBJECTIVES:**

1. To understand the competitive advantages of big data analytics.
2. To understand the big data frameworks
3. To learn data analysis methods
4. To learn stream computing
5. To gain knowledge on Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data analytics

**UNIT I INTRODUCTION TO BIG DATA**

**9 Hours**

Big Data – Definition, Characteristic Features – Big Data Applications - Big Data vs Traditional Data - Risks of Big Data - Structure of Big Data - Challenges of Conventional Systems - Web Data – Evolution of Analytic Scalability - Evolution of Analytic Processes, Tools and methods - Analysis vs Reporting - Modern Data Analytic Tools.

**UNIT II HADOOP FRAMEWORK**

**9 Hours**

Distributed File Systems - Large-Scale File System Organization – HDFS concepts - MapReduce Execution, Algorithms using MapReduce, Matrix-Vector Multiplication – Hadoop YARN

**UNIT III DATA ANALYTIC METHODS USING R**

**8 Hours**

Introduction to R - R Graphical User Interfaces- Data Import and Export - Attribute and Data Types - Descriptive Statistics- Visualization Before Analysis- Decision Trees in R - Naïve Bayes in R

**UNIT IV MINING DATA STREAMS**

**9 Hours**

Streams: Concepts – Stream Data Model and Architecture - Sampling data in a stream - Mining Data Streams and Mining Time-series data - Real Time Analytics Platform (RTAP) Applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions.

**UNIT V BIG DATA FRAMEWORKS**

**10 Hours**

Introduction to NoSQL – Aggregate Data Models – Hbase: Data Model and Implementations – Hbase Clients – Examples – .Cassandra: Data Model – Examples – Cassandra Clients – Hadoop Integration. Pig – Grunt – Pig Data Model – Pig Latin – developing and testing Pig Latin scripts. Hive – Data Types and File Formats – HiveQL Data Definition – HiveQL Data Manipulation – HiveQL Queries

**TOTAL: 45 HOURS**

**FURTHER READING:**

Logical data warehouses and federation technology, like data lake, APIs

**COURSE OUTCOMES:**

On the successful completion of the course, students will be able to

- CO1: Understand how to leverage the insights from big data analytics
- CO2: Analyze the HADOOP and Map Reduce technologies associated with big data analytics
- CO3: Analyze data by utilizing various statistical and data mining approaches
- CO4: Perform analytics on real-time streaming data
- CO5: Understand the various NoSQL alternative database models
- CO6: Explore on Big Data applications Using Pig and Hive

2002CA305

**DATA ANALYTICS LABORATORY**

L	T	P	C
0	0	4	2

**COURSE OBJECTIVES:**

1. To analyze big data using linear models
  2. To analyze big data using machine learning techniques such as SVM / Decision tree classification and clustering
  3. Discover the use of external modules in creating excel files and navigating the File systems.
  4. Learn to use in-built data structures in python
1. Write a R program to take input from the user (name and age) and display the values
  2. Write a R program to create a sequence of numbers from 20 to 50 and find the mean of numbers from 20 to 60 and sum of numbers from 51 to 91
  3. Write a R program to create a vector which contains 10 random integer values between -50 and +50
  4. Write a R program to create a Data Frames which contain details of 5 employees and display summary of the data
  5. Write a R program to create the system's idea of the current date with and without time
  6. Implement Linear and logistic Regression
  7. Implement SVM / Decision tree classification techniques
  8. Implement clustering techniques
  9. Visualize data using any plotting framework
  10. Write a Python program to find all prime numbers
  11. Write a Python program to print 'n terms of Fibonacci series using iteration
  12. Write a program to check that a given year is Leap Year or not.
  13. Write a Python Program to read a word and prints the number of letters, vowels and percentage of vowels in the word using dictionary
  14. Write a Python Event driven Program for file operations Press 1: to open file in read mode 2: open the file in write mode 3: current position of the file pointer 4: Reposition the pointer at the beginning 5: exit.
  15. Write a Python program to create a small GUI application for insert, update and delete in a table using Oracle as backend and front end fo creating form

**TOTAL: 60 HOURS**

**FURTHER READING:**

- 1 Implement word count / frequency programs using MapReduce
2. Implement an MR program that processes a weather dataset

*Employability*

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Work with basic data structures that are suitable for the problems to be solved efficiently
  - CO2: Design, code, and test small Python programs with a basic understanding of top-down design.
  - CO3: Learn how to create GUI and solve real-world problem using language idioms, data structures and standard library
  - CO4: Build and apply linear and logistic regression
  - CO5: Perform data analysis with machine learning methods
  - CO6: Perform graphical data analysis

**DISTRIBUTED SYSTEM AND CLOUD LABORATORY**

L	T	P	C
0	0	4	2

**COURSE OBJECTIVES:**

1. To understand the working model of distributed system.
2. To explore the concept of virtualiation in distributed computing.
3. To learn creation of simple cloud applications
4. To use tools related with cloud computing applications.
1. Develop a C Program for implementing non token based algorithm for distributed mutual exclusion
2. Develop a C Program to implement Lamports logical clock
3. Develop a Java Program to implement chat server
4. Install Virtualbox/VMware Workstation with different flavours of linux or windows OS on top of windows 7 or 8.
5. Install a C compiler in the virtual machine created using virtual box and execute Simple Programs
6. Install Google App Engine. Create hello world app and other simple web applications using python/java.
7. Use GAE launcher to launch the web applications.
8. Simulate a cloud scenario using CloudSim and run a scheduling algorithm that is not present in CloudSim.
9. Find a procedure to transfer the files from one virtual machine to another virtual machine.
10. Find a procedure to launch virtual machine using trystack (Online Openstack Demo Version)
11. Install Hadoop single node cluster and run simple applications like wordcount.

**TOTAL: 60 HOURS**

**FURTHER READING:**

1. Open source tools for distributed and cloud computing

**COURSE OUTCOMES:**

- On the successful completion of the course, students will be able to
- CO1: Design simple real time applications for distributed systems.
  - CO2: Apply virtualization in computer systems
  - CO3: Develop cloud applications in public cloud.
  - CO4: Make use of simulation tools to demonstrate the cloud scheduling models.
  - CO5: Develop virtual cluster for handling Big Data.

2004CA308 LIFE SKILL III - APTITUDE – II

L T P C  
0 0 2 1

Course Objective (s):

- To brush up problem solving skill and to improve intellectual skill of the students
- To be able to critically evaluate various real life situations by resorting to Analysis Of key issues and factors
- To be able to demonstrate various principles involved in solving mathematical problems and thereby reducing the time taken for performing job functions.
- To enhance analytical ability of students
- To augment logical and critical thinking of Student

**Unit 1 Partnership, Mixtures and Allegations, Problem on Ages, Simple Interest, Compound Interest** 6 Hours

Introduction Partnership - Relation between capitals, Period of investments and Shares- Problems on mixtures - Allegation rule - Problems on Allegation – Problems on ages - Definitions Simple Interest - Problems on interest and amount - Problems when rate of interest and time period are numerically equal - Definition and formula for amount in compound interest - Difference between simple interest and compound interest for 2 years on the same principle and time period.

**Unit 2 Blood relations, , Clocks, Calendars** 6 Hours

Defining the various relations among the members of a family - Solving Blood Relation puzzles - Solving the problems on Blood Relations using symbols and notations - Finding the angle when the time is given - Finding the time when the angle is known - Relation between Angle, Minutes and Hours - Exceptional cases in clocks - Definition of a Leap Year - Finding the number of Odd days - Framing the year code for centuries - Finding the day of any random calendar date .

**Unit 3 Time and Distance, Time and Work** 6 Hours

Relation between speed, distance and time - Converting kmph into m/s and vice versa - Problems on average speed - Problems on relative speed - Problems on trains - Problems on boats and streams - Problems on circular tracks - Problems on races - Problems on Unitary method - Relation between Men, Days, Hours and Work - Problems on Man-Day-Hours method - Problems on alternate days - Problems on Pipes and Cisterns.

**Unit 4 Data Interpretation and Data Sufficiency** 6 Hours

Problems on tabular form - Problems on Line Graphs - Problems on Bar Graphs - Problems on Pie Charts - Different models in Data Sufficiency - Problems on data redundancy

**Unit 5 Analytical and Critical Reasoning** 6 Hours

Problems on Linear arrangement - Problems on Circular arrangement - Problems on Double line-up - Problems on Selections - Problems on Comparisons - Finding the Implications for compound statements - Finding the Negations for compound statements- Problems on assumption - Problems on conclusions - Problems on inferences - Problems on strengthening and weakening of arguments .

**Total 30 Hours**

Course Outcomes:

**SKILL DEVELOPMENT**

- Solve problems on Partnership, Mixture & Allegation and ages least time using shortcuts and apply real life situations.
- Workout family relationships concepts, ability to visualize clocks & calendar and understand the logic behind a Sequence.
- Calculate concepts of speed, time and distance, understand timely completion using time and work.
- Learners should be able to understand various charts and interpreted data least time.
- Workout puzzles, ability to arrange things in an orderly fashion

2004CA307

**TECHNICAL SEMINAR AND REPORT WRITING**

L	T	P	C
0	0	2	1

**Course Objectives:**

1. To help students develop listening skills for academic and professional purposes.
2. To help students acquire the ability to speak effectively in English in real-life situations
3. To inculcate reading habit and to develop effective reading skills.
4. To learn and use client server architecture based applications.
5. To explore server side functionalities of an application.

**List of Experiments:**

The goal of this course is to train the students to critically evaluate a well-defined set of research subjects and to summarize the findings concisely in a paper of scientific quality. The paper will be evaluated based on the ability to understand a topic, communicate it and identify the issues. Results from this term paper will be presented to fellow students and a committee of faculty members:

1. Every student selects a topic related to current trends and the same should be approved by the respective committee. This selection should have at least 5 distinct primary sources.
2. Every student must write a short review of the topic and present it to fellow students and faculty (discuss the topic – expose the flaws – analyze the issues) every week.

The faculty should evaluate the short review and award marks with respect to the following.

3. Has the student analyzed – not merely quoted – the most significant portions of the primary sources employed?
4. Has the student offered original and convincing insights?
5. Plagiarism to be checked.
6. Every student should re-submit and present the review article including issues/ comments/conclusions which had arisen during the previous discussion.
7. Every student should submit a final paper as per project specifications along with all short review reports (at least 4 internal reviews) and corresponding evaluation comments.
8. Every student should appear for a final external review exam to defend themselves.

**Total: 30 Hours**

**Course Outcomes:**

**EMPLOYABILITY**

After completion of the course, Student will be

1. Gain confidence in facing the placement interview.
2. Develop effective communication skills (spoken and written).
3. Interact with each other and face a wide variety of issues, topics, and situations that they are likely to come across as entry level professionals

ELECTIVE II

2003CA006

MACHINE LEARNING TECHNIQUES

L	T	P	C
3	0	0	3

PREREQUISITE :

Data Analytics

COURSE OBJECTIVES:

1. To introduce students to the basic concepts and techniques of Machine Learning
2. To have a thorough understanding of the Supervised and Unsupervised learning techniques
3. To study the various probability based learning techniques
4. To understand graphical models of machine learning algorithms

UNIT I INTRODUCTION

9 Hours

Learning – Types of Machine Learning – Supervised Learning – The Brain and the Neuron – Design a Learning System – Perspectives and Issues in Machine Learning – Concept Learning Task – Concept Learning as Search – Finding a Maximally Specific Hypothesis – Version Spaces and the Candidate Elimination Algorithm – Linear Discriminants – Perceptron – Linear Separability – Linear Regression.

UNIT II LINEAR MODELS

9 Hours

Multi-layer Perceptron – Going Forwards – Going Backwards: Back Propagation Error – Multilayer Perceptron in Practice – Examples of using the MLP – Overview – Deriving BackPropagation – Radial Basis Functions and Splines – Concepts – RBF Network – Curse of Dimensionality – Interpolations and Basis Functions – Support Vector Machines.

UNIT III TREE AND PROBABILISTIC MODELS

8 Hours

Learning with Trees – Decision Trees – Constructing Decision Trees – Classification and Regression Trees – Ensemble Learning – Boosting – Bagging – Different ways to Combine Classifiers – Probability and Learning – Data into Probabilities – Basic Statistics – Gaussian Mixture Models – Nearest Neighbor Methods – Unsupervised Learning – K means Algorithms – Vector Quantization – Self Organizing Feature Map.

UNIT IV DIMENSIONALITY REDUCTION AND EVOLUTIONARY MODELS

9 Hours

Dimensionality Reduction – Linear Discriminant Analysis – Principal Component Analysis – Factor Analysis – Independent Component Analysis – Locally Linear Embedding – Isomap – Least Squares Optimization – Evolutionary Learning – Genetic algorithms – Genetic Offspring: - Genetic Operators – Using Genetic Algorithms – Reinforcement Learning – Overview – Getting Lost Example – Markov Decision Process.

UNIT V GRAPHICAL MODELS

10 Hours

Markov Chain Monte Carlo Methods – Sampling – Proposal Distribution – Markov Chain Monte Carlo – Graphical Models – Bayesian Networks – Markov Random Fields – Hidden Markov Models – Tracking Methods

TOTAL: 45 HOURS

FURTHER READING:

Mobile Adhoc Networks(MANET)

COURSE OUTCOMES: EMPLOYABILITY

On the successful completion of the course, students will be able to

- CO1: Distinguish between, supervised, unsupervised and semi-supervised learning
- CO2: Apply the appropriate machine learning strategy for any given problem
- CO3: Suggest supervised, unsupervised or semi-supervised learning algorithms for any given problem
- CO4: Design systems that uses the appropriate graph models of machine learning
- CO5: Modify existing machine learning algorithms to improve classification efficiency

**PREREQUISITE :**

Problem Solving and Programming

**COURSE OBJECTIVES:**

5. To explore the concepts of Dynamic web
6. To introduce the fundamentals of PHP
7. To make understand the usage of functions and objects
8. To explore the basic concepts of MYSQL database
9. To provide the knowledge of connecting PHP with MYSQL database

**UNIT I Introduction to Dynamic Web Content****12 Hours**

HTTP and HTML: Berners-Lee's Basics, the Benefits of PHP, MySQL, and JavaScript, The Apache Web Server Setting up a Development Server : What is a WAMP, MAMP, or LAMP?, Installing a WAMP on Windows, Installing a LAMP on Linux, Working Remotely, Using a Program Editor, Using an IDE

**UNIT II Introduction to PHP****12 Hours**

Incorporating PHP within HTML, The Structure of PHP, Expressions and Control Flow in PHP, Expressions, Operators, Conditionals, Looping, Implicit and Explicit Casting, PHP Dynamic Linking

**UNIT III PHP Functions and Objects****12 Hours**

PHP Functions, Including and Requiring Files, PHP Version Compatibility, PHP Objects, PHP Arrays : Basic Access, The foreach...as Loop, Multidimensional Arrays, Using Array Functions

**UNIT IV Practical PHP****12 Hours**

Using printf, Date and Time Functions, File Handling, Introduction to MySQL: MySQL Basics, Summary of Database Terms, Accessing MySQL via the Command Line, Indexes

**UNIT V DATA INTERACTION****12 Hours**

Accessing MySQL Using PHP Querying a MySQL Database with PHP, Practical MySQL- Form Handling Building Forms, Retrieving Submitted Data

**TOTAL: 60 HOURS****FURTHER READING:**

2. Plant UML

**COURSE OUTCOMES: EMPLOYABILITY**

On the successful completion of the course, students will be able to

- CO1: Explain the basic concepts of Dynamic Web
- CO2: Develop PHP programs using control structures
- CO3: Construct PHP programs using functions and objects
- CO4: Create MYSQL Databases using Command line
- CO5: Create PHP applications using MYSQL as backend

**LIFE SKILL I – BUSINESS ENGLISH**

L	T	P	C
0	0	2	1

**COURSE OBJECTIVES:**

1. To help students understand and develop the necessary skills to equip them for whatever career path they choose.
2. To guide students in making responsible decisions, to create a desire and to fulfill individual goals by improving their soft skill.
3. To get better students reading, listening, writing and speaking skills by breaking their barriers.
4. To help students improve their problem solving skills by ignite their minds through aptitude sessions.

**UNIT I**

**4 HOURS**

Career Opportunities  
Industry Expectations

**UNIT II SOFT SKILL TRAINING**

**6 HOURS**

Introduction to Soft Skill – motivational programming – personality development – self confidentiality – inner confidence beauty.

**UNIT III GOAL SETTING**

**4 HOURS**

Environmental awareness – Genetic Engineering – people management – time management - domain management – communication skills – trait attitude skills & videos

**UNIT IV**

**8 HOURS**

Communication skills – ICE breaking and activity sheets.

**UNIT V APTITUDE**

**8 HOURS**

Numbers: basics – H.C.F & L.C.M of numbers- Decimal fractions and problems on numbers.

**TOTAL: 30 HOURS**

**COURSE OUTCOMES:**

- Skill Development*
- On the successful completion of the course, students will be able to
