**ENGINEERING MATHEMATICS III (LINEAR** L Т P  $\mathbf{C}$ 1901MA301 ALGEBRA AND VECTOR CALCULUS) 2 4 **COURSE OBJECTIVES:** 1. To introduce the effective mathematical tools for the solutions of partial differential equations that model physical processes; To introduce Fourier series analysis which is central to many applications in engineering. To understand the classifications of Partial Different Equations and its applications. To introduce the Fourier transforms and Theorem To develop Z- transform techniques which will perform the same task for discrete time systems as Laplace Transform, a valuable aid in analysis of continuous time systems. UNIT I PARTIAL DIFFERENTIAL EQUATIONS Formation of partial differential equations - Singular integrals — Solutions of standard types of first order partial differential equations, Lagrange's linear equation — Linear partial differential equations of second order with constant coefficients of homogeneous type. FOURIER SERIES **UNIT II** 12 Hours Dirichlet's conditions - General Fourier series, Odd and even functions - Half range sine series - Half range cosine series - Parseval's identity - Harmonic analysis. APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS Classification of PDE - Solutions of one-dimensional wave equation, One dimensional equation of heat conduction, Steady state solution of two-dimensional equation of heat conduction. FOURIER TRANSFORMS 12 Hours Statement of Fourier integral theorem - Fourier transform pair, Fourier sine and cosine transforms, Properties, Transforms of simple functions – Convolution theorem, Parseval's identity Z – TRANSFORMS AND DIFFERENCE EQUATIONS 12 Hours Z - transforms - Elementary properties, Inverse Z - transform (using partial fraction and residues), Convolution theorem – Formation of difference equations, Solution of difference equations using Z – transform. Total: 60 Hours **FURTHER READING:** Linear partial differential equations of higher order Solution of non-homogeneous partial differential equations **COURSE OUTCOMES:** After completion of the course, Student will be able to: 1. Compute the solution of partial differential equations (K2) 2. Use Fourier series analysis which is central to many applications in engineering (K2) 3. Solve boundary value problem using partial differential equation.(K3) - moloyabilos Apply Fourier transform techniques used in wide variety of situations.(K3) 5. Apply Z transform techniques for discrete time systems. (K3) TEXT BOOK: Education Pvt. Ltd., New Delhi, 2012.

L 1902BM301 FUNDAMENTALS OF BIOCHEMISTRY 3 0 3 **COURSE OBJECTIVES:** To understand about the functioning of physiological system. To analyse the biochemical reactions and the various methods to analyze them. To know the significance of bio molecules in biological systems. To give an introduction about the clinical diseases To understand the concepts of Enzymes and Kinetics. UNIT I INTRODUCTION TO BIOCHEMISTRY 9 Hours Biomolecules, structure of water & its importance - Important non covalent forces - Hydrogen bonds, electrostatic, hydrophobic &vanderwaals forces – Acid, base & buffers – pH, Henderson Hassel Balch equation. Biological buffers and their significance - Principle of viscosity - surface tension, adsorption, diffusion, osmosis & their applications in biological systems. BIOENERGETICS UNIT II 9 Hours High energy compounds - electronegative potential of compounds, respiratory chain - ATP cycle, Calculation of ATP during oxidation of glucose and fatty acids. DNA-RNA, Proteins, Lipids, Carbohydrates. MACROMOLECULES, VITAMINS, HORMONES, ENZYMES 9 Hours Physical and chemical properties- structure of hemoglobin: immunoglobulin and nucleoprotein, classification and their properties, occurrence, functions, requirements, deficiency manifestations and role of vitamins as coenzyme, chemical nature and properties, hormones, Nomenclature - enzyme kinetics- classification and their properties, mechanism of action, enzyme induction and inhibition, coenzyme significance and enzymes of clinical importance. CLINICAL DISEASES Diabetes mellitus- insulin dependent diabetes mellitus, non-insulin dependent diabetes mellitus, measurement of HbA1c levels-atherosclerosis, fatty liver, and obesity-hormonal disorders, aging, inborn errors of metabolism organ function tests **UNIT V ENZYME AND ITS KINETICS** 9 Hours Classification of enzymes: apoenzyme, coenzyme, holoenzyme and cofactors. Kinetics of enzymes -Michaelis, Menten equation. Factors affecting enzymatic activity: temperature, pH, substrate concentration and enzyme concentration. Inhibitors of enzyme action- Competitive, non- competitive, irreversible. Enzyme- Mode of action, allosteric and covalent regulation. Clinical significance of enzymes. Measurement of enzyme activity and interpretation of units Total: 45 Hours **FURTHER READING:** Study metabolic pathways in pathological conditions. • Assess the significance of bio molecules in biological systems. Analyze the etiology and biological parameters in metabolic diseases. **COURSE OUTCOMES:** After completion of the course, Student will be able to Comprehend and appreciate the significance and role of this course in the present contemporary world. They will generate and test hypotheses, analyze data using statistical methods where appropriate, and appreciate the limitations of conclusions drawn from experimental data. Students will analyze the pathological conditions like obesity, Diabetes mellitus, atherosclerosis, fatty liver, and hormonal disorders, aging. Students will be able to understand and compare the Physical and chemical properties and structure of hemoglobin, immunoglobulins and nucleo protein. 5. Students will analyze the clinical significance of enzyme activity. Levelo pinent TEXT BOOKS: 1. Lehninger A.L., Nelson D.L. and Cox M.M. Principles of Biochemistry. C 1902BM302 BIO MEDICAL CIRCUITS AND NETWORKS 3 0 0 4 **COURSE OBJECTIVES:** 

- 1. Ability in identifying passive and active circuit elements/components and basic knowledge on their operation and application.
- 2. To prepare the students to have a basic knowledge in the analysis of Electric Networks
- 3. To understand and solve the given circuit with various theorems and methods and to distinguish between tie set and cut set methods for solving various circuits.
- 4. To gain knowledge about coupled circuits.
- 5. In depth knowledge in Integral & Differential Calculus and fundamental knowledge on Laplace Theorem & its inverse.

UNIT I MESH CURRENT AND NETWORK ANALYSIS Kirchhoff's Voltage Law- Formulation of Mesh Equations- Solution of mesh equations by Cramer's rule and

matrix method, Driving point impedance, Transfer impedance.

**NODAL ANALYSIS OF CIRCUITS** 

Graph of Network: Concept of Tree Branch, Tree link, junctions, Incident matrix, Tie-set matrix, Cutset matrix, determination of loop current and node voltages.

**RESONANT CIRCUITS** 

Series and Parallel Resonance, Impedance and Admittance Characteristics -Quality Factor, Half-Power Points, Bandwidth, Resonant voltage rise, Transform diagrams

## **NETWORK ANALYSIS**

9 Hours

Kirchoff's Current Law- Formulation of node equations and solutions- Driving point admittance, Transfer admittance, Solutions of Problems with DC and AC sources. Definition and implications of Superposition Theorem, Thevenin's Theorem- Norton's Theorem- Reciprocity Theorem- Compensation Theorem- Maximum Power Transfer Theorem- Millman's Theorem, Star-Delta transformations, Solutions and Problems with DC and AC sources.

#### UNIT V COUPLED CIRCUITS

9 Hours

Magnetic Coupling- polarity of coils, polarity of induced voltage, concept of self and mutual inductance, coefficient of coupling, Solution of Problems Circuit Transients- DC Transient in R-L & R-C circuits with and without initial charge, R-L-C circuits, AC transients in sinusoidal RL, R-C, & R-L-C circuits.

45 Hours

#### **FURTHER READING:**

- Understand, Describe and Analyze the Transients in electrical networks and solve related problems.
- Apply Laplace Transform and form Transfer Function for different kinds of electrical networks for analyzing them and solve related problems

## **COURSE OUTCOMES:**

### After completion of the course, Student will be able to

- 1. Understand, Describe, Analyze and Design series and parallel RLC circuits and solve related problems.
- 2. Analyze circuits using Node Voltage & Mesh Current Analysis in electrical networks and solve related problems.
- Apply and Analyze Network Theorems to electrical networks to evaluate network parameters in simplified 3.
- 4. Understand, Describe, Analyze and Design Graph and Trees for a given network and build network matrices
- and solve related problems

  5. Understand Describe, Analyze and Design Coupled (Magnetic and Electromagnetic) Circuits and solve related problems.

#### **TEXT BOOKS:**

- 1. Electric Circuits and Networks a text book written by Suresh Kumar K S., Published by Pearson Education ISBN:9788131713907 Pages: 840
- Circuit Theory and Network by S.p.Ghosh and A.K. Chakraborty, 2011

1902BM304 **HUMAN ANATOMY AND PHYSIOLOGY** 3 0 0 3 **COURSE OBJECTIVES:** 1. Know basic structural and functional elements of human body. 2. Learn organs and structures involving in system formation and functions. 3. Understand all systems in the human body. Gain knowledge about sensory system Better understanding of fluid maintenance **UNIT I BASIC ELEMENTS OF HUMAN BODY** 9 Hours Cell- Structure and organelles, Functions of each component in the cell. Cell membrane - transport across membrane, Origin of cell membrane potential. Tissue- Types, Specializedtissues, functions. RESPIRATORY SYSTEM AND URINARY SYSTEM Respiratory System- Components of respiratory system, Respiratory Mechanism, Types of respiration, Oxygen and carbon dioxide transport and acid base regulation. Urinary system: Structure of Kidney and Nephron. Mechanism of Urine formation, Urinary reflex, Homeostasis and blood pressure regulation by urinary system. Digestive system: Structure of Digestive system-Parts of Digestive system- Digestive process. **BLOOD AND CARDIOVASCULAR SYSTEM** 9 Hours Blood composition - functions of blood, functions of RBC, WBC types and their functions Blood groups, importance of blood groups, identification of blood groups. Blood vessels - Structure of heart - Properties of Cardiac muscle, Conducting system of heart, Cardiac cycle, Heart sound, Volume and pressure changes and regulation of heart rate, Coronary Circulation. Factors regulating Blood flow. SKELETAL AND SPECIAL SENSORY SYSTEM 9 Hours Skeletal system: Bone types and functions, Axial Skeleton and Appendicular Skeleton. Joint - Types of Joint, Cartilage structure, types and functions. Special Sensory system- Eye, Ear and Skin - diseases and related surgery. NERVOUS SYSTEM 9 Hours Structure of a Neuron - Types of Neuron. Neuroglial Cells, Synapses and types. Brain - Divisions of brain lobes, Cross Sectional Anatomy of Brain, Cortical localizations and functions. Spinal cord - Tracts of spinal cord, Spinal Nerve, Reflex mechanism - Types of reflex, Autonomic nervous system and its functions. Total: 45 Hours **FURTHER READING:** 1. To determine hemoglobin count in the blood by Sahli's method. In-vitro recognition of A, B, O blood groups by slide test. To find the total Red Blood Cell count using Neubauer's haemocytometer. To find the total White Blood Cell count using Neubauer's haemocytometer. 5. To study ECG Machine **COURSE OUTCOMES:** After completion of the course, Student will be able to 1. Describe basic structural and functional elements of human body. Explain gaseous exchange and fluid maintenance in the human body.
 Enlighten organs and structures involving in system formation and functions. Skill deutopment 4. Identify all systems in the human body. 5. Elucidate special senses in the human body. TEXT BOOKS: 1. 1902BM401	Bio Mechanics	L L	nng ne	a on 25	C C
	Bio Mechanics	3	0	0	3
	(For B.E, BME)			- 0	3
Course Objectiv					
	To explain the principle of mechanics.				
	Discuss the mechanics of physiological systems.				
	Explain the mechanics of joints.				
	Illustrate the mathematical models used in the analysis of biomecha	nical sy	zstems		
	Tounderstand about Kinetics and kinematics.	inour by	btenio		
UNIT I	INTRODUCTION TO MECHANICS			9 ]	Hours
Introduction - So	calars and vectors, Statics - Force types, Resolution and composition of forc	es, Mo	ments	of for	ce and
couple, Resultar	at force determination, parallel forces in space, equilibrium of coplanar	forces,	Dyna	mics,	Basic
principles - Line	ear motion, Newton's laws of motion, Impulse and Momentum, Work and E	nergy k	Cinetic	s – Ve	elocity
and acceleration	, Kinematics - Link segment models, Force transducers, Force plates, Int	roducti	on to	Const	itutive
	titutive equations of Nonviscous fluid, Newtonian Viscous fluid and Hookean	Elastic	solid		
UNIT II	BIOFLUID MECHANICS		C '11		Hours
cylinder and con	operties – Density, Viscosity, Compressibility and Surface Tension, Viscome and plate, Rheological properties of blood, Pressure-flow relationship for	eters —	Capill	ary, C	oaxial
Fluid mechanics	in straight tube – Steady Laminar flow, Turbulent flow, Flow developmen	I Non-	Newic	man i	Hulas,
Sheer Stress, Ef	fect of pulsatility, Boundary Layer Separation, Structure of blood vessels	Matei	rial nr	onertie	outein
modeling of Blo	od vessels, Heart –Cardiac muscle characterisation, Native heart valves – N	/lechan	ical pr	opertic	es and
valve dynamics,	Prosthetic heart valve fluid dynamics.		r	- F	
UNIT III	BIOSOLID MECHANICS				Hours
Constitutive equ	ation of viscoelasticity - Maxwell &Voight models, anisotropy, Hard Ti	ssues -	- Stru	cture,	blood
circulation, elasti	icity and strength, viscoelastic properties, functional adaptation, Soft Tissu	es – St	ructur	e, fund	ctions,
material propertie	es and modeling of Soft Tissues - Cartilage, Tendons and Ligaments Skeletal	Muscl	e – M	uscle a	iction,
UNIT IV	athematical modeling, Bone fracture mechanics, Implants for bone fractures.			0.1	
	BIOMECHANICS OF JOINTS  orces and stresses in human joints, Analysis of rigid bodies in equilibrium	Tro Ero	na had		Hours
Structure of joints,	ts, Types of joints, Biomechanical analysis of elbow, shoulder, spinal colu	mn hir	kne	y diag	,rams, ankle
Lubrication of sy	novial joints, Gait analysis, Motion analysis using video.	imi, iii	, Kiic	und	ankie,
UNIT V	MODELING AND ERGONOMICS			91	Hours
Introduction to 1	Finite Element Analysis, finite element analysis of lumbar spine; Ergono	omics -	- Mus	culosk	celetal
disorders, Ergono	omic principles contributing to good workplace design, Design of a Comp	uter wo	ork sta	tion, V	Whole
body vibrations, I	Hand transmitted vibrations. T				
F41 D 12		To	tal:	45 1	Hours
Further Reading	9		4	1	
applications	c biomechanics & mechano-biology, Mechanical tribology: materials, cha	aracteri	zatior	i, and	
Course Outcome	ze.				
Course Outcome	After completion of the course, Student will be able to				
	1. Understand the principles of mechanics.				
		10/10	12000	int.	
	3. Explain the fundamentals of bio-solid mechanics.	re cu	2114	7	
	4. Apply the knowledge of joint mechanics.				
	5. Give Examples of computational mathematical modelling applied in bio	 mechar	nics.

1902BM402 BASICS OF PATHOLOGY AND MICROBIOLOGY C 3 0 0 3 **Course Objectives:** To understand the structural and functional aspects of living organisms. To know the etiology and remedy in treating the pathological diseases. 3. To practice on chemical and structural examinations. To know about the microbial cultures. 5. To learn about the antibody reactions and diseases caused by microbes. UNIT I 9 Hours CELL DEGENERATION, REPAIR AND NEOPLASIA Cellinjury and Necrosis- Apoptosis, Intracellular accumulations, Pathological calcification- cellular adaptations of growth and differentiation, Inflammation and Repair including fracture healing, Neoplasia- Classification, Benign and Malignant tumours, carcinogenesis, spread of tumours. Autopsy and biopsy. UNIT II FLUID AND HEMODYNAMIC DERRANGEMENTS 9 Hours Edema- normal hemostasis- thrombosis, disseminated intravascular coagulation, embolism, infarction, shock. Hematological disorders-Bleeding disorders, Leukaemias, Lymphomas. MICROSCOPES Light microscope - bright field, dark field, phase contrast, fluorescence, Electron microscope (TEM& SEM), Preparation of samples for electron microscope. Staining methods - simple, gram staining and AFB staining. Parts of compound microscope- Flow cytometry and its applications. MICROBIAL CULTURES 9 Hours Morphological features and structural organization of bacteria- growth curve, Sterilization techniques - physical and chemical methods, identification of bacteria, culture media and its types, culture techniques and observation of culture. **UNIT V IMMUNOLOGY** Natural and artificial immunity- opsonization- phagocytosis, inflammation, Immune deficiency syndrome, antibodies and its types, antigen and antibody reactors, immunological techniques-immune diffusion, immuno electrophoresis, radioimmunoassay and enzyme linked immune sorbent assay, monoclonal antibodies. Disease caused by bacteria, fungi, protozoal, virus and helminths. Total: 45 Hours **Further Reading:** Comprehend and appreciate the significance and role of this course in the present contemporary world. Analyze structural and functional aspects of living organisms. Explain the function of microscopes. Discuss on the importance of public health. Describe treatment methods involved in curing the pathological diseases. Course Outcomes: After completion of the course, Student will be able to 1. Analyze structural and functional aspects of living organisms 2. Explain the function of microscopes. 3. Discuss on the importance of public health. 4. Describe treatment methods involved in curing the pathological diseases. 5. Perform practical experiments on tissue processing, sterilization techniques and staining **Text Books:** 1. Harsh Mohan, "Text book of Pathology". Jaypee Brothers Medical publishers private Limited, 7th 2. Anantha Narayanan, "Text Book of Microbiology", Orient Longman, 6<sup>th</sup> edition, 2012. 1902BM403		CONTROL SYSTEMS	L	T	P	С
			3	0	0	4
Course Object	ives:					
1. In this	course it is air	ned to introduce to the students the principles and applications of	cont	rol sy:	stems	
2. To the	basic concept	s of block diagram reduction, time domain analysis solutions to ti	me ir	varia	nt sys	tems.
<ol><li>In deals</li></ol>	with the diff	erent aspects of stability analysis of systems in frequency domain	and	time o	lomai	n.
		plication of control system.	2			
		ned to introduce to the students the principles and applications of	cont	rol sv	stems	
4						
UNIT I	INTRODU	CTION OF CONTROL SYSTEMS				9 Hours
Basic concept of	f control syst	ems - Open loop, closed loop control systems and their differen	ices.I	Block	diagr	
		w graph - Reduction using Mason's gain formula - Feedback				
feedback						
UNIT II	TIME RES	PONSE ANALYSIS				9 Hours
		ne response of first order system, Transient response of second				
		sponse, Steady state error, Effect of proportional, derivatives, Prop	ortio	nalint	egral	
UNIT III	FREQUEN	CY RESPONSE ANALYSIS				9 Hours
		requency domain specification, stability analysis frombode plot,	pola	r plo	t, Ny	quist plot -
		ag,Lead, lead-lag controllers design in frequency domain.				
UNIT IV	STABILITY	Y ANALSIS AND ROOT LOCUS TECHNIQUES				9 Hours
Concept of stab	ility - Routh	Hurwitz criterion, Nyquist stability criterion - Routh locus con	ncept	- cor	struc	tion of root
locus						
UNIT V	APPLICAT	TONS OF CONTROL SYSTEMS				9 Hours
		ms - Director(military), Embedded instrumentation - Fire of	ontro	l sys	tem -	- Guidance
navigation and	control - La	ser ignition - Weight shift control				
		Tota	ıl:			45 Hours
Further Readin	~					
	ol and disease	e modelling				
Course Outcon

			3	0	0	3
Course Object						
		asic theory of Bio potential Electrodes and Bio potential measure	ment.			
		esign of Bio potential amplifiers.				
		ectric signals and amplifiers				
		edical recording systems n-electrical physiological measurement and bio chemical measur	am an	to		
J. Study is	ne various no	m-electrical physiological measurement and bio chemical measur	emen	ıs.		
UNIT I	BIOPOTE	NTIAL ELECTRODES				9 Hours
Origin of bio p	otential and	its propagation. Electrode-electrolyte interface, electrode-skin i	nterfa	ice, h	alf-ce	ll potential,
Contact impeda	nce, polariza	tion effects of electrode - non polarizable electrodes. Types of	electi	rodes	- sur	face, needle
	trodes and t	heir equivalent circuits. Recording problems - motion artifac	ets, n	neasui	remen	it with two
electrodes.	DIODOTE	MADIAT BAREA CHIDEBARDANDO				0.17
UNIT II		NTIAL MEASUREMENTS		1 1	10.1	9 Hours
Bio signals cha	racteristics –	frequency and amplitude ranges. ECG – Einthoven's triangle aphy.EEG – 10-20 electrode system, unipolar, bipolar and average	e, sta	ndard	12 I	ead system,
bipolar mode. R	ecording of F	ERG, EOG and EGG	5 moc	ic. En	ηO- ι	iiipoiai aiiu
UNIT III		TRIC AMPLIFIERS				9 Hours
		agle ended bio-amplifier, differential bio-amplifier, Impedance	mate	hing	circu	
		optical isolation - isolated DC amplifier and AC carrier amplifi				
		ier, Band pass filtering	, -			,
UNIT IV		MENT OF NON-ELECTRICAL PARAMETERS				9 Hours
Temperature, re	espiration rate	e and pulse rate measurements. Blood Pressure: indirect metl	nods	-Ausc	ultato	orv method.
		methods: electronic manometer, Pressure amplifiers, Systoli				
circuit. Blood 1	flow and car	diac output measurement: Indicator dilution, thermal dilution	and	dye	diluti	on method,
		nd blood flow measurement.				
UNIT V		MONITORING SYSTEMS			17	9 Hours
System concepts	s- Cardiac mo	onitor-selection of system parameters, Bedside monitors, Central	mon	itors,	Heart	rate meter,
Organization an	r, spnygmon	nanometers- Holtermonitor and Cardiac stress test, Cardiac caused in ICCU & ITU.	uteriz	ation	ınstr	umentation-
Organization and	d equipment	Tot	al·			45 Hours

	INTEGRATED CIRCUITS			
	3	0	0	4
Course Objecti				
	by the circuit configuration and introduce practical applications of linear integrated			
2. To intro applicate	oduce the concept of application of ADC and DAC in real time systems and Phase tions.	Locke	d loop	with
	oduce the number systems and Logic gates.			
	yse combinational logic circuits.			
	g out the analysis and design procedures for sequential circuits.			
UNIT I	INTRODUCTION TO OPERATIONAL AMPLIFIER AND ITS APPLICATIONS			9 Hours
Operational am	plifier -ideal characteristics, Performance Parameters, Linear and Nonlinear Circ	cuits a	nd the	ir analysis-
voltage follower	r, Inverting amplifier, Noninverting Amplifiers, Differentiator, Integrator, Voltage	ge to (	Curren	t converter,
Instrumentation	amplifier- Low pass, High pass filter and band pass filters, Comparator-Mu	ltivibi	ator a	nd Schmitt
UNIT II	lar wave generator.  DIGITAL TO ANALOG AND ANALOG TO DIGITAL CONVERTERS			9 Hours
	s- High speed sample and hold circuit and IC's,-Types of D/A converter -Weighte	ad roc	ctor I	
DAC, D/A Acci	uracy and Resolution. A/D converter - Flash, Dual slope, Successive approximating controlled oscillator -Voltage to Frequency converters.	ion, A	/D A	curacy and
UNIT III	THE BASIC GATES ANDCOMBINATIONAL LOGIC CIRCUITS			9 Hours
	s – Decimal, Binary, Octal, Hexadecimal, 1's and 2's complements, Codes – Bina	urv Ri	7D 8/	
	nary, Gray, Alphanumeric codes, Boolean theorems, Logic gates, Universal gate			
product of sums	, Minterms and Maxterms, Karnaugh map and Tabulation methods.	s, bui	i oi p	roducts and

		Approved in IV Academic Council Meeting held on 25.05.2019
Course Outcom	mes:	
	Aft	er completion of the course, Student will be able to
	1.	Environmental Pollution or problems cannot be solved by mere laws. Public participation is an important aspect which serves the environmental Protection.
	2.	Public awareness of environmental is at infant stage.
	3.	Development and improvement in std. of living has lead to serious environmental disasters
	4.	Ignorance and incomplete knowledge has lead to misconceptions

LABORATORY    0   0   4   2	1902B	M451	PATHOLOGY AND MICROBIOLOGY L	T	P	C
Course Objectives:  1. The student should learn how to use Compound microscope, Practice on chemical examinations  2. To learn how to use Cryoprocessing, Histopathological examinations  3. To understand the concepts of staining  4. Microscopic visualisation of the microorganisms for disease determination.  5. Practical explanation of techniques used in tissue processing  List of Experiments:  1. Study of bone marrow charts.  2. Steam Sterilization using Autoclave  3. Manual paraffin tissue processing and section cutting  4. Cryo processing of tissue and cryosectioning  5. Basic staining – Hematoxylin and eosin staining.  6. Special stains – Cresyl Fast Blue (CFV)– Trichrome – oil red O – PAS  7. Simple stain, Gram stain, AFB stain.  8. Slides of malarial parasites, micro filaria and leishmania donovani.  9. Haematology slides of anemia and leukemia.  10. Urrine physical and chemical examination (protein, reducing substances, ketones, bilirubin and blood)  Additional Experiments:  1. Histopathological slides of benign and malignant tumours.  2. Differential count of different WBCs and blood group identification.  Course Outcomes:  After completion of the course, Student will be able to  1. List the laboratory tests performed for urine analysis.  2. Staining procedures are explained completely for the identification of microorganisms.  3. Practical knowledge about microscopes.  4. Explains the bleeding and clotting time for analysis of the fluid in the body.  5. Practical description about the structure and organisation of microorganisms and pathogens.  Text book:  1. Harsh Mohan, "Text book of Pathology". Jaypee Brothers Medical publishers private Limited, 7th Edition, 2014 References:  1. Practical explanation of techniques used in tissue processing  List of Experiments: 1. Study of bone marrow charts. 2. Steam Sterilization using Autoclave 3. Manual paraffin tissue processing and section cutting 4. Cryo processing of tissue and cryoscotioning 5. Basic staining – Hematoxylin and eosin staining. 6. Special stains – Cresyl Fast Blue (CFV)- Trichrome – oil red O – PAS 7. Simple stain, Gram stain, AFB stain. 8. Slides of malarial parasites, micro filaria and leishmania donovani. 9. Haematology slides of anemia and leukemia. 10. Urine physical and chemical examination (protein, reducing substances, ketones, bilirubin and blood)  Additional Experiments: 1. Histopathological slides of benign and malignant tumours. 2. Differential count of different WBCs and blood group identification.  Course Outcomes: After completion of the course, Student will be able to 1. List the laboratory tests performed for urine analysis. 2. Staining procedures are explained completely for the identification of microorganisms. 3. Practical knowledge about microscopes. 4. Explains the bleeding and clotting time for analysis of the fluid in the body. 5. Practical description about the structure and organisation of microorganisms and pathogens.  Text book: 1. Harsh Mohan, "Text book of Pathology". Jaypee Brothers Medical publishers private Limited, 7th Edition, 2014 References: 1. "Molecular Pathology: The Molecular Basis of Human Disease" by William B Coleman and Gregory Tsongalis 2. Ramzi S Cottan, Vinay Kumar & Stanley L Robbins, "Pathologic Basis of diseases", WB Saunders Co. 7th Edition, 2005.	Course	Objectives:				
2. To learn how to use Cryoprocessing, Histopathological examinations 3. To understand the concepts of staining 4. Microscopic visualisation of the microorganisms for disease determination. 5. Practical explanation of techniques used in tissue processing  List of Experiments: 1. Study of bone marrow charts. 2. Steam Sterilization using Autoclave 3. Manual paraffin tissue processing and section cutting 4. Cryo processing of tissue and cryosectioning 5. Basic staining – Hematoxylin and eosin staining. 6. Special stains – Cresyl Fast Blue (CPV)– Trichrome – oil red O – PAS 7. Simple stain, Gram stain, AFB stain. 8. Slides of malarial parasites, micro filaria and leishmania donovani. 9. Haematology slides of anemia and leukemia. 10. Urine physical and chemical examination (protein, reducing substances, ketones, bilirubin and blood)  Additional Experiments: 1. Histopathological slides of benign and malignant tumours. 2. Differential count of different WBCs and blood group identification.  Course Outcomes: 4. List the laboratory tests performed for urine analysis. 2. Staining procedures are explained completely for the identification of microorganisms. 3. Practical knowledge about microscopes. 4. Explains the bleeding and clotting time for analysis of the fluid in the body. 5. Practical description about the structure and organisation of microorganisms andpathogens.  Text book: 1. Harsh Mohan, "Text book of Pathology". Jaypee Brothers Medical publishers private Limited, 7th Edition, 2014 References: 1. "Molecular Pathology: The Molecular Basis of Human Disease" by William B Coleman and Gregory Tsongalis 2. Ramzi S Cotran, Vinay Kumar & Stanley L Robbins, "Pathologic Basis of diseases", WB Saunders Co. 7th Edition, 2005.			uld learn how to use Compound microscope. Practice on chemical examination	ons		
3. To understand the concepts of staining 4. Microscopic visualisation of the microorganisms for disease determination. 5. Practical explanation of techniques used in tissue processing  List of Experiments: 1. Study of bone marrow charts. 2. Steam Sterilization using Autoclave 3. Manual paraffin tissue processing and section cutting 4. Cryo processing of tissue and cryoscetioning 5. Basic staining — Hematoxylin and eosin staining. 6. Special stains — Cresyl Fast Blue (CFV)— Trichrome — oil red O — PAS 7. Simple stain, Gram stain, AFB stain. 8. Slides of malarial parasites, micro filaria and leishmania donovani. 9. Haematology slides of anemia and leukemia. 10. Urine physical and chemical examination (protein, reducing substances, ketones, bilirubin and blood)  Additional Experiments: 1. Histopathological slides of benign and malignant tumours. 2. Differential count of different WBCs and blood group identification.  Course Outcomes: After completion of the course, Student will be able to 1. List the laboratory tests performed for urine analysis. 2. Staining procedures are explained completely for the identification of microorganisms. 3. Practical knowledge about microscopes. 4. Explains the bleeding and clotting time for analysis of the fluid in the body. 5. Practical description about the structure and organisation of microorganisms andpathogens.  Text book: 1. Harsh Mohan, "Text book of Pathology". Jaypee Brothers Medical publishers private Limited, 7th Edition, 2014  References: 1. Dr. S. RAMABALAN, M.E., Ph.D.,
PRINCIPAL

1902BM452	BIO MEDICAL INSTRUMENTATION LABORATORY	L	Т	P	C
	B. ID OTHER OTHER	0	0	4	2
Course Objectives:					
	lesign Bio amplifiers.				
<ol><li>To provide har</li></ol>	nds on training on Measurement of physiological parameters.				
	t blood flow and blood measurement				
	about patient monitoring system				
<ol><li>To study about</li></ol>	t pH meter				
List of Experiments:					
	noise pre-amplifier				
	ECG signal and analysis using Simulation				
	l analysis of EMG amplifier.				
	l analysis of EEG with Simulation				
<ol><li>Measurement of</li></ol>					
6. Measurement of	of blood flow velocity using ultrasound transducer.				
	of blood pressure using sphygmomanometer.				
<ol><li>Study of charac</li></ol>	cteristics of Baby Ventilator.				
9. Measurement of	of vital parameters using Patient Monitoring System				
	of Hydrogen Ion using pH Meter				
Additional Experimen					
	mplement Isolation Techniques in designing Biomedical Instruments				
	f vital parameters using patient Monitoring Systems				
Course Outcomes:					
After completion of the	course, Student will be able to				
1. Design the ampl	lifier for Bio signal measurements.				
2. Measure heart ra	ate and heart sounds.	1			
3. Record and anal	yze pulse rate and respiration rate.				
4. Measure blood	pressure and blood flow.				
<ol><li>Design isolation</li></ol>	n amplifier.	no	421	ela.	A

			0	0	4	2
Course	Objectives:					
1.	To design digita	l logic and circuits				
2.	To learn the fun	ction of different ICs				
3.	To understand t	ne applications of operation amplifier.				
4.	To learn the wo	rking of multivibrators				
	5.	To design circuits for generating waveforms using ICs.				
List of	Experiments:					
1.	Inverting, non-in	nverting amplifier and comparator				
2.						
3.	Design and anal	ysis of active filters using op-amp				
4.		using operational amplifier				
5.		amplifier using operational amplifier				
	Phase shift oscil					
7.	Multivibrators u	sing IC555 Timer				
		ates, Half adder and Full adder				
9.	Universal shift r	egister using flip flops				
		demultiplexer using digital ICs				
	nal Experiment					
	Design of mod-l					
2.	Simulation and	analysis of circuits using software				
Course	Outcomes:					
After c	ompletion of the	course, Student will be able to :				
		tional Circuits using logic gates CO2: CO3: CO4: CO5:				
2.	Design and impl	ement arithmetic circuits for different applications using opamp				
		al Circuits using logic gates				
4.	Design wave for	m generators and analyse their characteristics	ali	uleti	1	
5.	Simulate and an	alyse circuits using ICs	-0-00-		] /	
Text B	ook:	m generators and analyse their characteristics  Alyse circuits using ICs  Exterior	20 DV	لده	HKD;	P
